Hello, folks. I am a long-inactive ham (WB6CSZ) who is always looking for a reason to get back into
hamming again. I have fiddled with hardware and software design at home for years. I stay interested in computers but lost interest in ham radio many years ago when the Japaneese radios
on 2M brought an influx of kids with profanity and idiots jamming repeaters. I've watched packet
radio unfold -but it seems like something I'd get bored with quickly.

any suggestions?

2058. Do you use technology at your club. Please read

Newsgroup: rec.radio.amateur.space
Date: 1995-10-04 00:00:00 UTC
From: aruss36461@aol.com
Message-ID: <44vkgc$dqo@newsbf02.news.aol.com>
Source record: 23966

I have been asked to research how different amateur radio clubs make innovative use of technology to communicate to, and with their members. I have volunteered to research this issue for the Montgomery Amateur Radio Club in Maryland. My goal is to present a report to the membership on how others are using packet, the internet, BBS services, voice mail, and even programmed repeater announcements to keep the flow of information in front of the members. I feel strongly that the time has come to consider the club newsletter as only one vehicle for the dissemination of information. Your comments are appreciated. If you are a member of a club, please share with me what your club does, or what you wish they did do.

When all responses are compiled I will make the total file available for anyone who wishes to see it.

Thank You.

To all radio amateurs

SB SPACE ARL ARLS015
ARLS015 P3D launch set back

The launch of the Phase 3D Amateur Radio satellite has been set back from May 1996 to September, according to the Radio Amateur Satellite Corporation (AMSAT).

The satellite is manifested on the European Space Agency's Ariane-5 Flight 502. The agency reported that tests on the launcher's cryogenic main stage have been under way in Kourou, French Guyana, and were to have ended shortly, but problems have called for changes that will delay upcoming launches 501 and 502.

AMSAT-North America President Bill Tynan, W3XO, said he was disappointed at the news, but that these things can often be expected in any development program. ''Ariane 5 is a very ambitious development program, but one which I am confident will result in great success for ESA-- both technically and commercially,'' Tynan said.

Tynan also said that the Phase 3D team will use the extra time to good advantage to construct an even better and more thoroughly tested spacecraft.

A story about the P3D satellite appeared in May 1995 QST.

From: clinton.peebles@saloon.bcbbs.net
Message-ID: <9510041402331588@saloon.bcbbs.net>
Source record: 23968

K>Need help getting started on hf sats. Anyone have a source of info on the
K>net that can tell me what I need to do to give this bird a try?

K>Also, can you recommend a good sat tracking program? (pc dos/win)

RS 12/13 is very easy to work. My first, and so far only sat contact
was with that bird. Here's the freqencies for it:

Uplink 21.21 - 21.25 USB/CW
Downlink 29.41 - 29.50 USB/CW
Beacon - 29.408 CW
Mode K

If you hear a signal on say 29.44, you tune your transmitter to 21.24.

I use STSPlus to track.

 QMPro 1.53 NT ..... Newfoundland Time ??

To all radio amateurs

SB SPACE ARL ARLS016
ARLS016 Listen to AMSAT meeting

A live feed from the Radio Amateur Satellite Corporation (AMSAT) annual symposium will be available on many local amateur repeaters this weekend, according to AMSAT.

Members of the Houston AMSAT Net will provide the feed from the 13th annual Space Symposium, in Orlando, on Friday, October 6, and Saturday, October 7, from 2230 to 2350 UTC both days, according to Bruce Paige, KK5DO. Paige said that since the meeting's exact schedule was not final, it was not clear what would be on the feeds. The Houston AMSAT members hope to include interviews with AMSAT principals as well as perhaps portions of seminars on the feeds.

''Preliminary equipment looks like a phone patch with a hand-held, a roving HT, and away we go,'' Paige said.

The regular, weekly Houston AMSAT Net is carried live on Tuesdays at 10 PM Central Time, on 147.100 MHz, and also is carried on Telstar 302, Transponder 21, 5.8 MHz audio subcarrier. Video is on the Skyvision Channel. These outlets will be used for the special symposium coverage.

A major feature of the symposium will be Saturday morning's panel presentation on the Phase 3D project. Dr. Karl Meinzer, DJ4ZC, who serves as the project leader for this international effort, will be a member of the panel, an AMSAT spokesman said. Dr Meinzer has agreed to be interviewed on the live feed.

Information on Phase 3D and other AMSAT activities is available on the Internet at AMSAT's World Wide Web site:

Stephanie. You might first check to be sure that the two programs you are using enter the lat/long in a similar manner. For example the program in the ARRL collection enters latitude West of Greenwitch while the BT program by W9IP enters zero to 360 degrees. Something like this might be fouling you up. The grid square system is very simply based on one by two degree squares and should be similar. 73 Cliff W6HDO

Hello Jim, here is Benoit VE2VB from St-Felix de Valois - Quebec
about 65 miles N-E of Montreal. I am a satellite operator, yesterday I
have worked CY0TX on Sable Island DX pedition.

If you want the best for amateur satellite
go for KLM 22-C Vhf antenna and the KLM 435-40CX for UHF I am using
those, all agree that they are the best antennas, I don't even use a
preamp or amplifier with those, I don't have amps at all.

I have worked into China, Almost all Europe etc...

Best 73 Benoit VE2VB

You can reply to ve2vb@amsat.org

Hello, my name is Benoit VE2VB from Canada.
I am a DSP-2232 owner and also a Kantronics KAM version 6.0 owner too.
I use the DSP-2232 for satellite work only, I use it on KO-23, KO-25
mainly. To be exact I prefer my KAM for HF mode. The best program for the
DSP-2232 in the HF mode is PC-PAKRATT for windows but I don't like
Windows to do all the jobs, all the time. Also they advertise this
DSP-2232 unit as SSTV ready, but ! no one has got out a software to
enable the function. All that the DSP can do, the KAM can also except
for 9600 bauds G3RUH. I am seriously thinking of getting rid of the
DSP-2232 and get a PK-96 or a KPC-9612 for satellite work and
terrestrial regular packet. I hope this is helping you

Benoit ve2vb@amsat.org

Hello guys

My name is Benoit VE2VB from St-Felix de Valois / Quebec
about 65 miles N-E of Montreal. I own a amateur satellite station and
I am quite active on AO-13 / AO-10 FO-20 / AO-27 and I got everything
ready for the microsats. DSP-2232 unit.

My station is the following

Kenwood TS-790A
KLM 22-C
KLM 435-40CX
YAESU G5400-B AZ/EL rotor

I am using Instant Track for the tracking, but I do the tracking manualy
I would like to know if there is any diagram for building home tracking
interface compatible with my set-up. If you have any reference to give
please leave me a message. I am a Amsat member

ve2vb@amsat.org

Thank you

2070. Re: Any DSP-2232 users out there???

Hello Ron, I also use a DSP-2232 version 7.0
for microsats (not hooked up yet) but later next week will be operational
and I wish someone would enable SSTV function, think of SSTV with DSP
technologies.... someday !

bye Benoit VE2VB@AMSAT.ORG

2071. Re: Any DSP-2232 users out there???

I own a DSP-2232 and I agree with you for the DSP-93
Let me get rid of this DSP-2232, I will replace it with DSP-93 from
TAPR they have programming going on ! them !

Benoit VE2VB@amsat.org

2072. DL0ART/am - 3rd launch on 10-08-95

Newsgroup: rec.radio.amateur.space
Date: 1995-10-07 00:00:00 UTC
From: Oliver Welp <welp@uni-muenster.de>
Message-ID: <454nnh$7d4@majestix.uni-muenster.de>
Source record: 23980

The Nienberge Amateur Radio Group (Germany) plans another
balloon launch on sunday, 07-16-95.

This is our third flight and will be the first one carrying
a transponder. 40 kHz of the 70 cm band will be translated
to 2 m. All hams are invited to use this facility.

Planned ARTOB launch 07-16-95:

Launch: # 3
Launch date: 10-08-95 (Sunday)
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA

Call sign: DL0ART/am
QRG/mod.: (1) Telemetry beacon: 145.200 MHz (F2D & F2A)
(2) 2nd beacon: 144.987 MHz (F1A)
(3) Transponder: (J3E & A1A preferred)
Uplink: 432.570 MHz \ +/-
Downlink: 144.470 MHz / 20 kHz
+ beacon on 144.470 (A1A)
(4) RX for remote control on 70 cm and 10 m

Power: (1) 2 W
(2) 100 mW
(3) 2.5 W

Antennas: (1) groundplane
(2) dipole or groundplane
(3) big wheel - one for 70 cm, one for 2 m
(4) 70 cm: groundplane / 10 m: lamda/2

Diameter ballon: ca. 8 ft

Talk back of DF teams and ground control via repeater Muenster,
DB0PD (R 84). Reports are welcome, please call DL3YBQ or DL9QJ.
Or send QSL to DL9QJ via bureau, via PR or via Internet. Each
report will be confirmed by a special QSL card of the balloon.

Any suggestion or response is always welcome!
Best 73,
Oliver

[Oliver Welp, DL9QJ, N3NSF

Hello LLoyd
Name here is Benoit callsign: VE2VB Qth 65 miles N-E of Montreal.

Active on 2m & 70.cm are: AO-10 / AO-13 / FO-20 / AO-27 (FM)
2m UP & 10m Down: RS-10-11 / RS-15

I own the same radio TS-790A
Antennas here are the KLM 22C and 435-40CX the big ones.
Also own a DSP-2232 to get hooked to the microsats soon.

Bye

VE2VB@AMSAT.ORG

2074. NORAD Two-Line Orbital Element Sets (TLE688)

Newsgroup: rec.radio.amateur.space
Date: 1995-10-07 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.813025912@dolphin>
Source record: 23982

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

```

2075. MIR QSL INFORMATION

Newsgroup: rec.radio.amateur.space
Date: 1995-10-07 00:00:00 UTC
From: hamdan@ix.netcom.com
Message-ID: <456i01$ac2@ixnews4.ix.netcom.com>
Source record: 23983

Last night (Oct. 7th, 6:10 UTC) I had the pleasure of working R0MIR (Crew 20, Sergey and Yuri) on the space station MIR on packet (keyboard to keyboard). I would like to obtain a QSL for this QSO, but the only QSL info I have concerns the EUROMIR operation. If anyone has the QSL info for R0MIR, I would appreciate it if you could send it to me.
Thanks and 73's de Bernie, KF0QS. hamdan@ix.netcom.com.

2076. Re: Satellite Antenna Questions

Either of these two would be a handy reference antenna. And when the
bird is strong you will hear it on these antennas, despite the
"requirement" for extra gain. The experience of using simple antennas
is very educational. And linear modes like SSB/CW are remarkably
forgiving, unlike FM where the detector gives up the ghost very
quickly once the signal is down in the noise.

WHichever was easiest to build, as a reference point.

> coax for this?
Most solid dielectric coax cables have velocity factors of 0.66.
However, foam and other types are higher. Check the tables in the
ARRL Handbook or Antenna Handbook for your cable type.

2078. Satellite Antennas

Newsgroup: rec.radio.amateur.space
Date: 1995-10-07 00:00:00 UTC
From: headshrnkr@aol.com
Message-ID: <456v0v$kln@newsbf02.news.aol.com>
Source record: 23986

Why are Yagis used in working the Oscar satellites not mounted in a true 90 degree plane? Why are they mounted at a 45 degree angle? What effect if any would be had be mouting them at 90 as opposed to 45 degrees? The reason I ask this is I, unaware of this 45 degree mounting, mounted my antennas at 90, not 45 degrees. I can work FO-20, AO-13 fine, will I see am improvment by changing to a 45 degree mount? In other words is it worth a trip back to the roof?

How would this affect working stations on the ground? One last question, what are the vertical/horz polarity switchs used for on the KLM Oscar antennas, does this create RHCP or LHCP? Thanks for the input!

73,
Bruce KB2VKJ

2079. How to Get Free Cable Premium TV .. LEGIT

Newsgroup: rec.radio.amateur.space
Date: 1995-10-07 00:00:00 UTC
From: md@goodnet.com
Message-ID: <DG2vI9.3wG@goodnet.com>
Source record: 23987

First I want to say I am sorry that this has nothing
to do with the topic of this group. You may see this
message in other newsgroups, the reason is I am subscribed
to those too so please don't flame me. I have been posting
and reading to this group for a while. I just wanted to
let you people out know there is a way to get Cable TV for
FREE. I recieve this letter in the mail from a friend
that had told me it works. I gave this to one of my friends
and he had free cable in his house within 20 mins. I have not
tried this method yet but may soon try if my cable goes up in
price. If anyone would like a copy send the following to the
address below.

Address Envelope to:

FreeStuff
9393 N. 90th St.
Suite 102-289
Scottsdale, AZ 85258

Enclose in the envelope:

Send...

$1.00 U.S MONEY *** NO COINS *** NO CHECKS ***
inside a sheet of carbon paper or construction paper,
and send a *self-addressed*,*stamped* envelope to the
address above.

Thanxs,
Just think if you pay 30$ + a month. 1$ will save
you 359 + dollars a year.

2080. 8052AH tracking code available

Newsgroup: rec.radio.amateur.space
Date: 1995-10-08 00:00:00 UTC
From: jlbarber@wolfenet.com
Message-ID: <458lp2$4ld@news1.wolfe.net>
Source record: 23988

Greetings, all.

Having a rather severe computer noise problem here, I dug
an old 8052AH board out of the closet, and ported my cheezy
tracking program to it. Although it it written around the
interface hardware I have (LCD display and clock chip) it
could be modified easily. I also have code to download
the kep set for the desired bird from a PC to the 8052,
set the clock, and get it going. After which, you simply
turn the "big machine" off, and enjoy quiet operation.

The code is in Intel 8052AH BASIC, and is free to anyone
that can make use of it.

73,
Jim Barber, N7CXI

Hi Bernie,

Hey I just read your message about contacting Mir. I'm sorry but I don't have the QSL information.

I wanted to know if I could use your report in a new column I'm writing for Satellite Times magazine. It consist of a satellite log of reception reports from hobbyist like yourself. One thing you didn't provide was your location, and what frequency this contact was on???? Write back when you can.

2082. ???10M-70cm XVERTERS???

Newsgroup: rec.radio.amateur.space
Date: 1995-10-08 00:00:00 UTC
From: tom.alldread@minfox.com
Message-ID: <9510081511363822@minfox.com>
Source record: 23990

Greetings All:

I am looking for a low cost 10 metre to 70 cm transverter. I
wonder if anyone knows of a modern kit or homebrew project for a low
cost transverter? Also I would be interested in any recommendations on
this subject.

73 de VE7TMA

You have good antennas, but you have my sympathy on the TS-790A.
Have you already discovered you can't use the narrow filters on
the subband? You know, the one you *listen* on? Sheesh! I'd also
suggest you limit transmission time sharply on 435 MHz. The PA
brick in the radio gets very hot very quickly, and doesn't have
adequate thermal sinking or protection. And the SAT track tuning
is a joke. I dumped mine and got a FT-736R. A bit long in the
tooth perhaps, but at least it was designed with the satellite
operator's *real* needs in mind.

I don't really want to rain on your parade, just wanted to let
people know that there are problems with the TS-790A for satellite
operation, especially digital satellite operation, where good narrow
filters can make an enormous difference.

Hi - one thing I did was to get the numbers off the surveyor's stake closest to the shack (or the deed) and call the land registry off to get the true co-ordinates(long and lat) and then used one of the programs available from the arrl. Watch how the data is entered as some programmes expect different data and the surveyors office told me that the LAT and LONG convention as used by surveyors changed in '86 (at least in Canada as to how the surveyors numbers on the stakes are connverted).

From ARRL Headquarters
Newington, CT October 10, 1995
To all radio amateurs

SB SPACE ARL ARLS017
ARLS017 Phase 3-D details set

All major contractual issues are now complete for the launch of the Phase 3-D Amateur Radio satellite, scheduled for September 1996. Phase 3-D International Satellite Project Leader Dr Karl Meinzer, DJ4ZC, made the announcement at the annual Radio Amateur Satellite Corporation (AMSAT) meeting held the weekend of October 7 in Orlando, Florida.

The final arrangements establish a firm cost, schedule and technical baseline for the launch, Meinzer said. The contract includes a launch price of about 1 million dollars; contributions so far from individuals and organizations around the world will cover the ''first installment'' of the launch bill, about 800,000 dollars, which is due November 1, 1995.

AMSAT-NA President Bill Tynan, W3XO, said that in addition to the additional 200,000 dollars needed for launch, another 200,000 dollars is still needed to complete final assembly, check-out, and testing of the satellite.

The contract with ESA specifies that if, for some reason, launch is not possible on the Ariane 502 rocket launch in September, 1996, the space agency will exercise its ''best efforts'' to launch P3-D on an (older) Ariane 4 booster, no later than mid-1997. Meinzer said that the P3-D design team has built the satellite and its carrying structure to be compatible with both the Ariane 4 and 5 boosters.

Meinzer led negotiations with the European Space Agency (ESA) the previous weekend, in Evry, France. Also present at those meetings were AMSAT-North America Executive Vice President Keith Baker, KB1SF, and AMSAT-NA Vice President for Engineering Dick Jansson, WD4FAB.

A story about the P3-D satellite appeared in May 1995 QST.

I am trying to get InstantTrack to work with Win95. All is working fine, with the exception of the NBS time update function. I am using a PCMCIA modem and Win95 has assigned it an IRQ of 15. When I attempt to update the time, the Modem dials and seems to connect (the speaker turns off), but no data is exchanged, ie., the text normally associated with time update is displayed. I am using com3 and have chanded the NBSCOM.INI file to port = 2. I manually changed the modem IRQ = 4 and was able to update t
he time properly, but other conflicts poped-up on my system and I was forced to set the IRQ back to 15. Any suggestions would be much appriciated. Also, does anyone have the email address for N6NKF? I have his Compuserve ID number, but do not know how to send him mail with it.

>
>I live in an apartment and am going to try using a discone antenna. Has
>anybody had any expierance, with this antenna? I am going to try using
>my Yaesue ft290II and ft790II radios with a duplxer on Mir and to
>listen to dove.
A diskcone generally has some "wierd" nulls in its' overhead response.
I used one for about two months to recieve the NOAA birds. It worked..
but there were bad gaps in the signal. While I used the Radio shack
diskcone, I have tried several others at friends shacks and they all
have pretty much the same overhead response. A turnstill(?sp?) is
MUCH better. The hiegth above the ground plane makes a BIG difference
in the overhead response. Check out one the older ARRL antenna books
or specialize coms books. There was some discusion several mnts ago
on this ng about the "eagbeater" antenna. From the reports and comments,
it looks to be a good space com contender. All of this ng is archived..
but I don't know where or how to retrive them. If you want I might
still have most of the thread(I only throw away things right before
I need them), just drop me an email and if I have them I will try to
email them back.

A metal support through the boom will affect will degrade the pattern
of a circularly polarized antenna no matter if it is mounted in + or x
configuration. I should like to know if someone has actually tested,
if there was a difference.

* COMET HEADED FOR BRIGHT ENCOUNTER *
====================================
A very unusual comet was discovered on 23-Jul-95, on its way from the outer
reaches of the solar system towards the Sun. Although it is still situated
beyond the orbit of Jupiter, it is so bright that it can be observed in even
small telescopes. It has been named `Hale-Bopp' after the discoverers and
is already of great interest to cometary astronomers.

The comet is expected to pass about 120 million kilometres from Jupiter in
April 1996, and it will approach the Sun to about 140 million kilometres
when it passes perihelion in early April 1997. At the time of perihelion,
the comet's geocentric distance will be about 200 million kilometres, the
angular distance (`elongation') in the sky from the Sun about 45 degrees
and it will be located in the northern sky at declination +45 degrees.
It will actually by `circumpolar' in Northern Europe and therefore well
observable all night from there.

One possible cause for the unusual brightness of Comet Hale-Bopp at its
present location, more than 200 million kilometres outside the orbit of
Jupiter, is that it possesses a very large nucleus, that is the `dirty
snowball' of dust and ice at the centre of a comet. The larger the
diameter of the nucleus, the more sunlight will be reflected from its
surface and the brighter will it appear. A corresponding estimate
indicates that the diameter of its nucleus would be nearly 100
kilometres, as compared to about 10 kilometres for Comet Halley.

If the orbital period is near 3000 years, the brightness near perihelion in April 1997 could reach magnitude -1.5. This means that Comet Hale-Bopp would become almost as bright as Jupiter which will also be visible in the night sky at that time.

What is even more exciting, the comet would stay this bright during several weeks and be visible from the Northern hemisphere during many hours each night. It will even be above the horizon all night for observers located north of geographic latitude 45 degrees. Thus, in addition to providing a wonderful opportunity to astronomers for learning more about comets, Hale-Bopp may become an object of great public interest. This is especially so, because it is now almost 20 years since a comet has been this bright. The last one (Comet 1976 VI - which was discovered at ESO) attained this magnitude during a few days in early March 1976.

At the present time, Comet Hale-Bopp is located in the southern constellation of Sagittarius and it is very well placed for observations from southern observatories. Irrespective of its performance later on, the unusual brightness at the present heliocentric distance already makes it a very interesting object for astronomers.

Because of its unusual brightness, and in order to follow the future evolution of Comet Hale-Bopp, coordinated observations at La Silla are now being planned for the next several months. Thereafter, the comet will move behind the Sun as seen from the Earth and observations with the large telescopes will only become possible again in March 1996. There is no doubt, however, that from then on, its further development will be followed with great care by the observers. Better predictions for its brightness near perihelion will also become available.

2100. DL0ART/am - 3rd launch

Newsgroup: rec.radio.amateur.space
Date: 1995-10-12 00:00:00 UTC
From: Oliver Welp <welp@uni-muenster.de>
Message-ID: <45hm85$1doe@majestix.uni-muenster.de>
Source record: 24008

DL0ART/am -
The Nienberge Amateur Radio Group (Germany) performed its third
balloon launch on sunday, 08-Oct-95.

This time, Murphy really hit us...
We announced a transponder (70 cm -> 2 m) would be part of the
payload. We thought so till some hours before launch, but had to
find out what the deepest meaning of the word intermodulation is. We
mainly blame the telemetry transmitter for that, but we decided that
having that one aboard is a bit more important than a transponder...
So we have to appoligize if anyone looked desperately for the signal
and didn't find it - folks, your equipment is fine (get it out of
the garbage can again!) - the signal simply wasn't there.

We hope having the payload (including tha transponder) working
flawlessly till the next launch (whenever that will be).

Links to reports about the first two launches can be found at URL:
http://www.usa.net/~rickvg/othgrp/othnews.htm

ARTOB launch 08-Oct-95:

Launch: # 3
Launch date: 08-Oct-95
Launch time: 1211 UTC
Launch site: Nienberge near Muenster, NW Germany, JO32SA

Payload DL0ART/am:
QRG/mod.: (1) Telemetry beacon: 145,200 MHz F2D & F2A
(2) 2nd beacon: 144.991 MHz F1A (call & info text)
(3) Transponder cancelled - sorry!
(4) RX for remote control on 70 cm and 10 m (not used)
Power: (1) 2 W
(2) 100 mW
(3) ---
Antennas: (1) groundplane
(2) turnstile
(3) big wheel for 2 m used to attach the parachute /
70 cm cancelled
(4) 70 cm: groundplane / 10 m: lambda/2 vertical
Power supply: (1) & (4): 5 D cells LiSO2 in series (=14.4 V, 6 Ah)
(2) 1 D cell LiSO2 (3 V) and step-up to 9 V
Diameter ballon: ca. 8.5 ft
Gas: hydrogen
Parachute: ca. 6 ft
Weight: 4005 g (over all)

Lift rate: ca. 300 g

Talk back of DF teams via repeater Muenster, DB0PD (R84).

(UTC)
10:30 ARTOB team meets at Armin's QTH
11:20 arrival of launch site
11:30 filling the balloon
11.55 phone call to DFS (= German FAA)
12:00 airport Muenster-Osnabrueck (FMO) called; in case we happen
to get into their inner control zone we're allowed to pass at
a minimum altitude of 30,000 ft (!)
12:05 final testing of gaz valve
12:11 LAUNCH
The balloon lifts steadily and drifts to N/NE (35 deg)
12:22 altitude 4,500 ft, rate of ascend (ROA) 475 ft/min.
12:28 altitude 7,575 ft,
first opening of gaz valve (1 min.);
ROA 215 ft/min thereafter
12:30 second opening of gaz valve (1 min.); ROA 180 ft/min.
12:35 third opening of gaz valve; when trying to close it this does
not. The volve remains opened till the end of the flight.
12:38 max. altitude: 10,050 ft
12:54 altitude 6,175 ft, rate of descend (ROD) 300 ft/min.
13:10 Touchdown of balloon. Some DF teams lose signal
13:40 balloon found by Oliver, DL9QJ, and Ludger, DL3YBO.

Tochdown site: "Kattenvenner Moor" (JO32WC), 10 miles E of Greven
Touchdown distance: 13.5 miles

max min
Altitude: 240 ft 10,050 ft

Temp. (inside) 26.9° C 31.5° C
Voltage 14.29 V 14.35 V

The positive thing was that (after we found the signal again) the
DFing was easy: simply go straight ahead as long as signal on the HT
(vertical car antenna) increases; when it's strong enough, just hit
the brakes and find yourself in a distance o 5 ft from the balloon!
Indeed, it was attached to a fence next to a small rural road -
never forget the confused cows on the other side of the fence...

We had many responses (reports) via PR (someone put us into the DX
cluster) - and obviously, the beacons could even be heard in the UK
(grid JO02)!

We were not too delighted that again (just like the first flight)
the balloon came down too early because of a malfunction of the
valve (and not even being the same flaw). We'll anyway redesign the
valve till the next launch.

The DF coordinating has to be improved - we also found that giving bearings every 10 min. is to much for the teams - you simply do not make enough miles in case the balloon would be faster. We scheduled "must" bearings for xx:00, xx:20 and xx:40 h - and many teams dropped the (voluntarily) ones at xx:10, xx:30 and xx:50 h. But only one or two bearings would help the coordinating team - so we'll probably change to a xx:00 / xx:15 / xx:30 / xx:45 h schedule.
The driving directions of the control team were poor - yes, this time, they had to do everything manually - no help of the PC program (because not enough notebooks available).

If you heard our sigs, pse send QSL via PR / Internet / buro - all will be answered with our DL0ART/am QSL cards! Any suggestion or response is always welcome!

I "stumbled" across this also, after reading your other posts to the
various newsgroups.
I found it to be pretty lame. No real information available, only
directions on how to subscribe. One would have to describe it as just
another 'I'net ad". Of course, if it really is in developement then maybe
in the future it really would contain useful information. Presently tho it
has little to offer...

2103. Scanners and radio astronomy

Newsgroup: rec.radio.amateur.space
Date: 1995-10-13 00:00:00 UTC
From: Nick Gleeson <ng@shannon.tellabs.com>
Message-ID: <1995Oct13.081039.19847@tellab5.tellabs.com>
Source record: 24011

Hi folks,
I have a wide band scanner 500khz to 1.3Ghz am nfm and wfm, and I was wondering if I could do any radio astronomy with this gadget, I am thinking of buying a Discone antenna, as I am using a magnetic whip at the moment. What freqs are suitable for listening to meteor pings?, what frequencies can Jupiter be heard on? Can I listen in to any satellites? I have a PC with a sound card, so I presume that I can use this to record signal levels etc.

Any help here would be much appreciated, Thanks in advance.

My sentiments exactly. Ham radio today On-Line hasn't officially been released, so what is there now is just a temporary fill-in. I have been given the task of editor of this absolutely BRILLIANT site. Yes, I know that at the moment it may not be at all impressive. But that's going to change on November 3rd - the onsale date of Ham Radio Today magazine - I'm going to release the most amazing new-look site (it's just got to be seen to be beleived!) which I'm working on now. It will contain loads of articles and the latest news and be generally MUCH BETTER!!! Same URL)(http://www.tcp.co.uk/~slorek) but incredible features. Remember that date: November 3rd!!! I would also add that since October 1994 I have been running the software offer (details at Ham Radio Today On-Line) and still going! Bye!

P.S. Remember, November 3rd!

In <Somebody.34.0037106A@here.com>, Somebody@here.com writes:
>KR4FC who lives in Georgia is a liar, and an asshole. Watchout for him and
>for God sake don't trust him to do anything or know any thing. He is a dumb
>ass!

In a fit of circular reasoning, I deduce that this anonymous post was
perhaps made by KR4FC, or at least by someone who fits his description.

In the unlikely event that this "Somebody.34.0037106A@here.com" is in
earnest, a short description of what he has done or said to evoke this
opinion would permit the rest of us to judge for ourselves whether or
not the opinion is warranted. I fear that this is just a severe case
of slanderous net.noise, alas.

We are looking for distributors world wide for:
THE SMALLEST FM WALKMAN RADIO IN THE WORLD

Specifications

Frequency range : FM 88 - 108 Mhz
Worldwide system: USA - EUROPE - ASIA
AFRICA - AUSTRALIA
South AMERICA
Power source : 1 x 3 Volt
Button cell battery
CR-2032 or equivalent
Antenna : Earphone cables antenna
Dimensions : 37 x 27 x 10 mm.
1 2/5" x 1 1/8" x 2/5"
Weight : 23 gram. 1/20 Lib.
Warranty : 3 Months World wide

Distributor Prices List

Quantity Price per Unit
--- ---
1 20 $ USA.
2 - 9 16 $ USA.
10 - 99 12 $ USA.
100 - 999 10 $ USA.
1000 - UP 9 $ USA.

SPECIAL SAMPLES OFFER

Before you decide to become our product distributor
please order a sample of
"THE SMALLEST FM RADIO WALKMAN IN THE WORLD"
for a special offer of 16 $ USA. for one unit
or 28 $ USA. for two units

We are 100% sure that if you get the offer
you will become our product distributor.

>I will not change your mind and you damn sure can not change mine."

I use the radio shack discone for contacting MIR and have had no
problems at all. In fact I am running both a 440 rig and 2m rig using
a duplexer and have had no problems connecting to MIR. Now living in
an apartment is a different story. My antenna is 20 feet in the air
outside so I get a good shot at MIR.

Radio Meteor Observation Bulletin No. 26 Oct 1995

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Thomas Ashcraft
Location: Santa Fe, New Mexico, USA (35 42' N, 105 57' W)
Frequencies: 98.1 MHz, 94.7 MHz, 89.5 MHz, 91.9 MHz, 91.1 MHz
Transmitters: Multiple transmitters received.
Receivers: Sangean ATS-803A, Technics SA-160, Sony HP-160,
Hallicrafters SX-62B
Antennas: Using four separate six element directional FM Yagi's
Ant. Elev: Experimenting with different elevations
Obs. method: Listening and counting in real time or during audio tape
playback. I make a second by second count and also note duration
of each reflection and any significant qualities.
WWV universal time is also recorded on the audio tapes.

August/September 1995

Day	31--01 02
UT 7h	96 99 83
8h	94 109 110
9h	96 133 116
10h	102 125
11h	140
Day	31--01 02

Notes:

. I have been doing many meteor reception experiments the past weeks. I am
attempting to audio record forward scatter 24 hours a day to detect any
anomalous meteor activity, fireballs, atmospheric phenomena, re-entering
space debris, etc. A problem still to resolve is adequate chart recording.
Until I acquire funds for a good chart recorder I will try to maintain raw
audio tapes two weeks ahead. If anyone notes any special meteor activity
please contact me and I may be able to verify with my tapes. After two
weeks I must then recycle these tapes.

. I have audio tape and VHS recordings for the periods of the Alpha Aurigid
and Sextantid meteor showers. Days before and after. All recordings
include second by second WWV universal time stamp. If there is a meteor
scientist interested in plotting these tapes, they may be available. Please
feel free to contact me at 72632.1427@compuserve.com

. September 18, 1995 Space Shuttle STS-69 re-entry reception experiment:

On Sept. 18, I attempted to receive forward scatter reflections from the re-entering space shuttle Endeavor. It re-entered the earth's atmosphere within forward scatter radio range over Waco, Texas --1300 kilometers distant from Santa Fe-- Results: negative, no reflections observed.

. Mountain Daylight Time is -6 hours universal time.
Local midnight is 06:00 UT. Local noon is 18:00 UT.

. If anyone in the western half of North America is interested in engaging in some joint radio meteor observing experiments, please feel free to contact me.

Thomas Ashcraft

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW - from WRTH95, looked up by Jeroen Van Wassenhove):
Siedlce Poland, 66.41 MHz, 25 kW
Pardubice Czech Rep 66.44 MHz, 30 kW
Hradec Kralove Czech Rep 66.44 MHz, 30 kW
Sibiu Romania 66.44 MHz, 40 kW
Poznan Poland 66.56 MHz, 38 kW
Baia Mare Romania 66.56 MHz, 35 kW
Budapest Hungary 66.62 MHz, 100 kW

Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East), elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA, Bratislava
The receiver was calibrated with a Marconi TF2008 signal generator. Sensitivity: 5 muV (modulation frequency 1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution. [Time and details of all individual meteor reflections are stored on file in the University of Ghent format (Prometeos), and are available for further analysis. Reduction software for DOS and Windows available].

Sept 1995

Raw counts of reflections with a duration of at least 0.027 s during one hour interval starting at UT:

12 | 22 39 25
13 | 14 46 23
14 | 19 36 20
15 | 24 26
16 | 26 30
17 | 30
18 | 33
19 | 31 29 37
20 | 35
21 | 43

UT | 20 21 22 23 24 25 26 01 02 03 04 05 06 07 08 09 10 11 12 13 16 17
| July August

Notes:

. Counts are corrected for deadtime.
. Location was not perfect because of a mountain partially in front of
the antenna. For this reason the antenna elevation was increased to
25 degrees instead of the 12 degrees normally used in Appingedam,
Netherlands.
. In Appingedam I am counting typically 2.5 times more sporadic meteors
with the same equipment.

2. BOOK OFFER

Artech House Books, Portland House, Stag Place, London, SW1E XA, U.K.
(bookco@artech.demon.co.uk) offers "Meteor Burst Communications" (hardcover
167 p. 1990, ISBN 0-89006-445-8) by J. Schanker for the price of 10.00 GBP.
Two optional IBM PC-compatible diskettes cost also 10.00 GBP.
Another publication which might be of interest is "Troposcatter Radio Links"
(hardcover 250 p. 1988, ISBN 0-89006-293-5), also available for 10.00 GBP.

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio
meteor scatter observations and data reduction. It started in August 1993

in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and has gradually been expanded.

Typically it contains: summaries of recent observations, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or unsubscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

>if there was a difference.

When AO-10 was first launched, I used the AOP-1 package from Cushcraft
(shudder) with a metal crossboom. Changing the orientation of the elements
with respect to the crossboom did make an audible difference in the
spin modulation on the 2 meter beacon, x orientation being better. It
also changed the shift in pattern center off the antenna boresight axis.
Neither orientation resulted in a boresight pattern, but the + orientation
was worse than the x orientation. Of course I found out that even with a
fiberglass crossboom the pattern was off boresight, but at least rotating
orientation of the elements no longer caused the off-axis pointing error
to vary in magnitude.

A better antenna might make all this much more noticable. My KLM-22C
has a pretty clean circular pattern, and it's on boresight. I haven't
tried it on a metal crossboom, but I'd expect the effects of the
metal crossboom to be much more apparent with it than with an antenna
that was already so screwed up that the crossboom only had a secondary
effect on it.

I did try another antenna set, two pairs of Cushcraft long boomers,
32-19s and 424Bs (pretty decent antennas), spaced 2 wavelengths on
vertical metal crossbooms tied to the elevation crossboom, IE an H
stack, and used with phasing harnesses for RHCP. There, setting the
beams canted at 45 degrees with respect to the boom made a substantial
difference in circularity. A picture may help, if laid on its side,
each half of the H looked like this /-\ when circularity was best,
and like this |-- when circularity was worst. Obviously, having one
antenna's elements share the same plane as the metal boom is a bad idea.

This latter setup had good gain, but the circularity went to hell
with the slightest off-pointing. I find the KLM-22C more tolerant
of slight pointing errors in respect to circularity while delivering
almost the same amount of usable forward gain. The big H had a lot
of windloading and torque loading too. The 22C and 40CX are the better
compromise.

Gary

We are looking for distributors world wide for:
THE SMALLEST FM WALKMAN RADIO IN THE WORLD

Specifications

Frequency range : FM 88 - 108 Mhz
Worldwide system: USA - EUROPE - ASIA
AFRICA - AUSTRALIA
South AMERICA
Power source : 1 x 3 Volt
Button cell battery
CR-2032 or equivalent
Antenna : Earphone cables antenna
Dimensions : 37 x 27 x 10 mm.
1 2/5" x 1 1/8" x 2/5"
Weight : 23 gram. 1/20 Lib.
Warranty : 3 Months World wide

Distributor Prices List

Quantity Price per Unit
-------- --------------
1 20 $ USA.
2 - 9 16 $ USA.
10 - 99 12 $ USA.
100 - 999 10 $ USA.
1000 - UP 9 $ USA.

SPECIAL SAMPLES OFFER

Before you decide to become our product distributor
please order a sample of
"THE SMALLEST FM RADIO WALKMAN IN THE WORLD"
for a special offer of 16 $ USA. for one unit
or 28 $ USA. for two units

We are 100% sure that if you get the offer
you will become our product distributor.

Balony. The smallest FM walkman radio can be plugged in your ear. It's no bigger than the earphones of yours. It's available here in Europe (Asian import) for around $40.

Get this noise of groups like alt.video.laserdisc!

Bill. As far as I know MIR is simplex on 145.550 unless it has changed.

Hi Nick,

it's great you have a scanner and antennas available for scanning and listening to the heavens.

Firstly you may be interested in being part of the Seti project that has been taken over from Nasa by the SETI league. Send a message to info@setileague.org or send me a message and I will supply additional information.

There is a web site with plenty of information on listening to the heavens, pre-amps, receivers and more: http://set1.setileague.org

Hope it helps you,

Peter Vekinis, EI4GV/KC1QF
pve@dg13.cec.be

2123. NORAD Two-Line Orbital Element Sets (TLE691)

Newsgroup: rec.radio.amateur.space
Date: 1995-10-17 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.813902318@dolphin>
Source record: 23932

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2124. Updated WWW Site

Newsgroup: rec.radio.amateur.space
Date: 1995-10-17 00:00:00 UTC
From: amsoft@epix.net
Message-ID: <NEWTNews.813970745.11764.amsoft@amsoft>
Source record: 23933
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.space,rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc,rec.radio.amateur.antenna

The AmSoft web page "http://hamster.business.uwo.ca/~amsoft/" has
been reworked. It is now the Mother of all WWW sites for Amateur
Radio. Connect to over 125 ham sites direct from the front page.
New HTML work includes online forms, plenty of color and lots of
FUN! It could be addicting using our page.

2125. Need SGP & SDP Code

Newsgroup: rec.radio.amateur.space
Date: 1995-10-17 00:00:00 UTC
From: gerheim@sonalysts.com
Message-ID: <460cf6$pkj@hatch.sonalysts.com>
Source record: 23934

We have a copy of the Project Space Track Report Number 3, containing
FORTRAN 8-(listings of the 5 SGP/SDP routines. We would like to know
if we can download the code from an ftp site. We would especially
like to have C code for these routines. We need the source listings,
which we can incorporate into our own image analysis routines. Complete
executables for trackers don't interest us. We
can type and translate, but it's slow and prone to error.

Please email.

I don't want to be your distributor and next time, please, don't send "junk mail" on alt.tv.xuxa,
please.

>DOVE..

If it was still working DOVE's Mode-S beacon would be at 2401.220 MHz.
They turned Mode-S off a while ago. Try UO-11 instead. Its Mode-S beacon
was recently heard at 2401.500 with a carrier.

Good Luck.

2131. Pre-amplifier

I have heard pings from rocks before. I'm just wondering if anyone has ever done or thought of working other types of ionization trails. How about when the shuttle re-enters the atmosphere. Or maybe one last contact using AO-13 when it re-enters?

2135. Goddard Anniversary Day Today (10/19)

Newsgroup: rec.radio.amateur.space
Date: 1995-10-19 00:00:00 UTC
From: ai181@freenet.buffalo.edu
Message-ID: <DGpnMo.487@freenet.buffalo.edu>
Source record: 23944

Today is the 96th Anniversary of what Dr. Goddard called his "Anniversary Day". This was the day he had his vision of spaceflight which determined his destiny. The following is from his autobiographical notes regarding October 19, 1899:

"On this day I climbed a tall cherry tree at the back of the barn... and as I looked towards the fields at the east, I imagined how wonderful it would be to make some device which had even the possibility of ascending to Mars, and how it would look on a small scale, if sent up from the meadow at my feet..."

"It seemed to me then that a weight whirling around a horizontal shaft, moving more rapidly above than below, could furnish lift by virtue of the greater centrifugal force at the top of the path."

"I was a different boy when I descended the tree from when I ascended," he wrote. "Existence at last seemed very purposive."

There are any number of PCMCIA receivers available. There are also several
ISA card receivers available.

Try the likes of Trimble, Ashtech, NavSymm and GEC Plessey Semicon for info.
If you are after a wide range of product info, look for a recent copy of GPS
World magazine.

Cheers ... Peter.

2141. NORAD Two-Line Orbital Element Sets (TLE692)

Newsgroup: rec.radio.amateur.space
Date: 1995-10-20 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.814225113@dolphin>
Source record: 23950

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

2142. What modes is the rs/10-11 and rs/12-13 using?

Newsgroup: rec.radio.amateur.space
Date: 1995-10-20 00:00:00 UTC
From: bd384@scn.org
Message-ID: <DGrn88.9HE@scn.org>
Source record: 23951

Has anyone worked rs/11 or rs/13 recently?

2143. Re: MIR freqs?

QST for August 1995 ran a nice article on the SETI (Search for Extra Terrestrial Intelligence) League. See page 37. The article describes a project to combine the efforts of thousands of hams to look for signals coming from other solar systems. This is necessary because the government refuses to fund NASA to continue the effort they have been conducting for decades.

Dear Friends,

Thank you for reading this message. I would
like to order one pre-amplifier to 1.2 to 1.6 GHz.

But, I don't know how to find it. Please,
any help? I thank you in advance!

Vy best wishes and 73,

****

In article <46agrc$j39@pink.lm.com>, raver909@telerama.lm.com (Joe LeSesne) says:>At 2:06 AM Eastern Time these exact words were
heard by a female astronaut: "We have an Unidentified
Flying Object."

How do I know this? I heard it whilst watching
NASA TV.
Before you laugh at this, check the tapes of
NASA TV or better yet check with an amateur
radio operator who taped the feed.

For 10-15 minutes nothing else was said. When something
WAS said it wasn't about the UFO. Don't sleep on this
It could be a BIG story. Either:

a) Our astronauts are hallucinating or mis-
identifying meteors, spacejunk, satellites, etc.

b) Our astronauts had a unique encounter and
there are extraterrestrial intelligently piloted
vehicles in space.
c) some other earth power is spying on our shuttle
with their devices.

or

d) NASA has known this for some time and is covering up
the the fact. The woman didn't sound very upset or shaken,
she said rather matter of factly,"We have an Unidentified
Flying Object."

>--

Just because it was "Unidentified" dosn't mean it was an alien craft just it was not an identified object. I dont suppose she took a photo of "it".

True and someone sent me this email:

On Sat, 21 Oct 1995, (name witheld) wrote:

>
>
> Why does it have to be an alien?

(To which I responded)

It doesn't. It means unidentified.

> They see UFOs all the time - space debris.

I'll buy that but if it was simply space debris then why were there no
further communication. You'd think that if that were the case then
Houston would have responded with "Yeah that's part of a XYZ stage" or
the Shuttle having identified it would have said, "Yeah that UFO was ice
crystals from an experiment we did" etc..

> UFO does not mean aleine, it just means an object they can't
> identify.

True, however since Houston didn't respond with any type of explaination
for the astronauts (at least in any way that was transmitted on NASA TV) then
that object remains unidentified. Alien or otherwise.

> There is all kinds of parts, ice etc that float by. She said it matter
> of factly because there is no reason to act any other way!

Or she said it matter of factly because thats how they have been trained.
The facts are this:

She said: "We have an Unidentified Flying Object"

nothing futher was heard from either the Shuttle or Houston for 10-15
minutes and when there was communication it didn't offer an explaination
for the object was, there was no communication between Houston and
Columbia about it at all which leads me to believe that either:

a) The astronauts on board did not identify it.
b) Houston didn't identify it.

so

1) Neither discussed it further
2) They discussed it further on a different channel which was not relayed on NASA TV.

So far there has been no word from NASA on this. One of our local TV stations here called them and asked about it, as did CNN.
Like I said, check the tape.

joe

or Cady Coleman (the astronaut you heard) has a pretty good sense of humor. I've known her for a couple of years - and trust me, she's got a sense of humor.

The crew was also asked if they had ever seen a space alien in space, and commander Ken Bowersox commented that the only alien he had ever seen in space was fellow astronaut Story Musgrave. Now that's at least a bit more believeable! (especially if you know Story).

The STS-52 mission was in orbit over Halloween, and on the last full day of the mission everybody watching NASA TV saw astronaut Tammy Jernigan get kidnapped by a space alien.

yeah, right.

Misidentifying spacejunk? Isn't any piece of space junk
unidentified (at least to a human observer)? There are
thousands of pieces of space junk in orbit around the earth,
this is the obvious explanation. It is interesting to note
that being in orbit doesn't really constitute flight so the
statement likely inaccurate at the very least.

> b) Our astronauts had a unique encounter and
> there are extraterrestrial intelligently piloted

Unlikely, even if true so what?

> d) NASA has known this for some time and is covering up
> the the fact. The woman didn't sound very upset or shaken,
> she said rather matter of factly,"We have an Unidentified

Unidentified flying objects are just that, no big deal.
Anything "flying" that you don't know 100% for sure what it is
is unidentified. This makes the vast majority of things we
see moving in the sky "ufo"s by definition. The wonder assigned
to such objects must somehow be connected to a fascination with
flight since no one makes a big deal about unidentified driving
objects (udos) or unidentified crawling objects (ucos).

Now, had the astronaut said something like,
"I see an extraterrestrial spacecraft" it would be a different
story.

~~~~~~

Thanks a LOT cats! I just sent parts of this thread with your message
to a *cat lover* before I pulled up the image. She is still mad at
me for sending her a copy of the "How to Handle a Radioactive Cat" gif
months ago. Please tell me this cat was very comfortable during this
test and it was an actual experiment that will benefit catkind :)

To all radio amateurs

SB SPACE ARL ARLS019
ARLS019 More hams on tv

Mark your calendar. Amateur Radio is expected to be part of the cable television Sci-Fi Channel's ''Inside Space'' program the weekend of November 17.

Tentative plans are for airings on Friday evening the 17th at 9 PM Eastern Time and later in the weekend. The show is expected to include scenes from the AMSAT Phase 3-D satellite lab in Orlando, as well as perhaps ARRL Field Day and other Amateur Radio scenes, says AMSAT Executive Vice President Keith Baker, KB1SF.

The Sci-Fi Channel also has recently been filming amateurs in conjunction with yet another episode of Inside Space, to air in December or January.

MONDAY OCTOBER 23, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* OSCAR-11 REPORT *
==================
As of Wednesday 18 October 1995 at 06:11 UTC, telemetry was nominal, and
WOD was dated 16th October. Bulletin $BID UO11.029 dated 6th October was
being broadcast.

The current diary schedule is as follows:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
ENG (30 seconds)

There are also additional status blocks after each bulletin is transmitted.
It is possible that the long period of ASCII status transmissions will be
replaced by binary TLM and WOD.

A new WOD survey of channels 1, 2, 3, 61 (magnetometers) is usually started
when the weekly bulletin is loaded, or when other ground control activity
occurs.

OSCAR-11 can be heard on 145.826 MHz. Modulation is 1200 baud AFSK with
tones of 1200/2400 Hz. There have been many designs for suitable decoders,
but perhaps the simplest way is to use an old telephone modem, using Bell

202, or V23 tones. It is essential to invert the modem's output signal before feeding it into the computer. For ASCII, the serial port should be set to 1200 E,7,1.

The satellite also has an S-Band beacon that transmits a continous carrier on 2401.5 MHz.

Schools can now send their Amateur Satellite News to Richard Limebear, G3RWL, via the Internet (g3rwl@amsat.org) for inclusion in the ASCII new broadcasts made by OSCAR-11.

[Info via Clive Wallis, G3CWV]

* GALILEO NEWS *
==========
Engineering data returned from NASA's Jupiter-bound Galileo spacecraft on 11-Oct-95 indicates a problem with the spacecraft's tape recorder, project officials report.

Project officials say a week or more may be required for the problem to be isolated or well-understood, but that the spacecraft remains otherwise healthy and in contact with controllers on Earth.

The problem was detected shortly after Galileo took an image of Jupiter and its major moons from 22 million miles away. After taking the three images required for a color photograph to be produced, the tape recorder used to store the data was commanded to rewind. Data received from Galileo suggest the tape recorder did not stop as expected after rewinding.

"Galileo engineers have commanded the tape recorder to a standby mode while they investigate further," said Galileo Project Manager William J. O'Neil of NASA's Jet Propulsion Laboratory (JPL), Pasadena, CA. Project engineers are proceeding slowly and cautiously to understand the problem, according to O'Neil, and are avoiding sending unnecessary commands to the spacecraft. In addition to analyzing spacecraft telemetry, engineers are working with an identical tape recorder in a laboratory spacecraft mockup on the ground.

"The next scheduled spacecraft operation that we need to perform is a routine thruster flushing in about two weeks," said O'Neil. "We want to take the time in the interim to understand this problem in detail."

[Info via NASA]

* MIR CREW USING NEW AMATEUR RADIO COMMUNICATIONS *
==========
German Cosmonaut Thomas Reiter (amateur radio callsign DP0MIR) and his two Russian crew members (R0MIR) have installed a new 70 cm band transceiver aboard their Mir space station.

Uplink Downlink

Main 70 cm frequencies are: 435.725 MHz 437.925 MHz (Voice)

435.775 MHz 437.975 MHz (Packet)

2 meter frequencies are: 145.200 MHz 145.800 MHz

145.550 MHz 145.550 MHz

There has been no 9600 baud packet radio activity yet since the high speed
TNC will not arrive at MIR space station until the end of the year. ESA
plans to extend the EUROMIR 95 mission an additional 44 days.

2173. New Weather Satellite Receiver

Newsgroup: rec.radio.amateur.space
Date: 1995-10-24 00:00:00 UTC
From: wowee@msn.com
Message-ID: <00001ff1+000004b4@msn.com>
Source record: 23833

Hello fellow electronics enthusiasts!

Being an engineer at Ramsey Electronics has put me in an exiting position to bring fun to build and use electronic kits to electronic hobbyists such as myself. Can you believe that I am performing a job that is my hobby as well? (Amazing!) Well, because kit building is my hobby, it turns out that in creating them, we come up with some really cool ideas for products that we would like to build ourselves. My newest, and Ramsey's latest is the Weather Satellite Receiver system. Yes, there are other satellite receivers out there, but how many are kits?

After virtually a year of work on the hardware and the software, I am proud to present an easy to use APT (automatic picture transmission) satellite system. Much work has gone into creating an easy to build electronic kit with clear and concise directions of putting it together, as well as a simple to use and understand graphical interface on the software. We have decided to remove most of the "bells and whistles" out of the program to make it easier for students and inexperienced computer users to learn and use.

Ramsey Electronics is now offering this kit which includes five major parts as follows:

1. Weather satellite antenna - A simple to assemble turnstile antenna system for receiving satellites from horizon to horizon.

2. Antenna Pre-amplifier - A mast mounted RF-Amplifier designed especially for the purpose of weather satellite transmissions. It is powered remotely from the Weather Satellite Receiver through the transmission line.

3. Weather satellite receiver (WSR-1A) - A wide band FM receiver operating around 137.5MHz.

4. Weather satellite decoder board (SD-24) - A "Smart Card" PC interface board that digitizes the signal from the WSR-1A at a very accurate sample rate.

5. Imaging Software (Weather Viewer) - A graphical program written exclusively for the weather satellite systems. It combines the commands most commonly used for satellite image enhancement into one package.

If you wish to receive an image captured from a tape recording of a satellite to demonstrate the system's ability to align a satellite image, e-mail me at the following address. I will also send your some

more information and technical specifications on the subject.

Yours sincerely;

Mark Wyman

Naw, most of the "expense" was paid at launch time. The cost of a few minutes floating around in LEO is trivial compared with the cost of getting 5-7 human beings and an allegedly reusable spacecraft up there to begin with.

>
>Must not have been a very funny joke since it seems to
>have been followed by quite a bit of silence, eh?

I've seen those NASA-channel broadcasts. Most of the airtime IS spent in silence. ESPECIALLY at 2 in the morning. I watch the NASA channel sometimes because it's a welcome relief to the nonstop soundbites I get on commercial TV, and because I can make fun comments like "Hey, why is the Orbiter's nose pointing slightly UPWARD when they do a deorbit burn?". But even deorbit burns are a wave of nonstop action and excitement compared with the usual "aaaaaand ... here comes ORBIT FIFTY-SIX!".

To all radio amateurs

SB SPACE ARL ARLS020
ARLS020 More gear for Mir

German Cosmonaut Thomas Reiter, DP0MIR, and his two Russian crewmates, have installed a 70-cm band transceiver aboard their Mir space station, according to John Magliacane, KB2BD, in SpaceNews.

The main 70-cm band frequencies are:

Voice: 435.725 MHz (uplink), and 437.925 MHz (downlink).

Packet: 435.775 (uplink) and 437.975 MHz (downlink).

2-meter frequencies are:

Voice: 145.200 MHz (uplink) and 145.800 MHz (downlink).

Packet: 145.550 MHz (uplink) 145.550 MHz (downlink).

ARRL Note: This voice uplink frequency is not available for use in areas where repeater outputs operate on the same or adjacent frequencies, and will be subject to interference from repeaters when Mir is in range of North America.

There has been no 9600 baud packet radio activity yet, since the high speed TNC will not arrive at the Mir space station until later, SpaceNews said.

Most activity from DP0MIR has been in talking with schools, mainly in Germany.

The three men aboard Mir were scheduled to return to earth in mid-January, but that reportedly has been extended into mid-February.

-Is there any indication that this "UFO" was outside the Space Shuttle,
-as opposed to inside? They have a lot of junk flying around inside
-the cabin.
-
- -- Jeff, in Minneapolis (Hi, Dean O. in Buffalo!)

This is the most probable explanation of the "UFO." I recently
watched a show, on FOX I think, about "UFOs." It showed several
"UFOs" during the previews that were taken by cameras on the
space shuttle. ALL of these "UFOs" were out-of-focus water
droplets that had adhered to the windows. These water droplets
refracted the light from the sun or interior lighting so that they
had an oval appearance to them. Since they were out of focus they
it was difficult to see the outline of the darker portion of the droplets.

You seem to have come in late to this discussion. Unidentified
Flying Objects are just that -- things that fly that haven't
been identified. There's a lot of junk out where the shuttles
go that's hard to identify (space junk from past missions,
satellites, etc.). Now if she'd said 'unknown spaceship',
that would be interesting.

<< If I remember correctly Oberg, it's people like you who always complain that
the imagination of "believers" is running wild. but no, Oberg wants to walk
both sides of the street this time. >>

Sorry, once again, as usual, UFO buffs DON'T remember correctly. But we save the UFO newsgroups for the insult-trading, and here we're supposed to discuss reality. Claims of UFO sightings by astronauts are part of the modern space age mythos and I consider them valid topics for this thread, except when the discussion degenerates into sincere assertions of true belief, and sincere questioning of the intelligence and ethics of those who disagreee with you. THAT line of (un)reasoning fits into alt.alien.visitors much better!

Sigh. I probably have sixty or seventy dfifferent "cases" of astronauts and cosmonauts encountering UFOs, and the kind of mentality that could find ANY of them credible -- or proof of ETI encounters -- seems to me to be incapable of really handling real mysteries of space exploration. May the space snake of Story Musgrave bite you all in the soft body tissues!

I know what Joe wrote provokes many people to 'flame' back saying he is jumping to conclusions - but totally dismissing his claims as a pile of 'ufo nut - wishful thinking - bull' is really being no better. I have heard and read of several cases where astronauts see unidentifiable objects while on a mission - some are easily explained as natural (or man-made) phenomena, while others are still a mystery to this day.

Thoughtful suggestions and unbiased, rational arguments are needed on this topic. Not the 'aliens made my dog talk' or 'ufo nuts abuse to many substances' crap that is far too common on both sides of the spectrum.

The idea of alien existence is not really that far fetched an idea, whether its true or not. That's to say that if we prove definitely that aliens DO NOT exist... the idea that we thought once that they could exist, was not stupid.

Actually, that space snake -- or as Dean says, that "wacky, scary space snake" -- is remarkably consistent with the snake falling out of the sky over Mexico in 1993, which was videotaped by an amateur. Twenty glowing orbs emerged from it, and these orbs, in turn, looked and wobbled exactly like the footage from Tremonton, Utah in 1950. Please, dig up the snake explanation for me.

The analysts were USAF, Jim. Do you have any evidence that the objects
were analyzed by the Navy and concluded to be birds? Since when was
the Navy involved with UFO research? The USAF's Project Bluebook
concluded that the objects were NOT birds. Nor were they aircraft or
anything else known to mankind. Do you have any evidence that the
objects were birds?

No, I certainly never said that about Story's "space snake", but
then imagination has always prevailed over accuracy in your posts.

> is remarkably consistent with the snake falling out of the sky
>over Mexico in 1993, which was videotaped by an amateur.

Heh. And you also love to try and claim two TOTALLY different
examples are "remarkably consistent". Story's space debris has
absolutely no comparison to your silly example. That is almost
as bad as when you said the STS-48 ice particle "UFOs" were
"identical" to the video of Venus taken over Mexico City during
the eclipse. Can you at least please keep your wild UFO fantasies
out of the sci. hierarchy?

Actually, I think the idea that life does not exist anywhere else is a
more far-fetched idea. The universe is a mighty big place, and it seems
likely that ours is definitely NOT the only solar system in it. It would
seem most unlikely that the Earth is the only planet in all the universe
where intelligent life actually evolved.

I am puzzled by the sceptics who back SETI which has zero evidence for interstellar radio contact yet immediately disregard the sightings collected by Project Bluebook and the conclusions that UFO's are no threat. Not all Venus, birds, swamp gas or thermal inversions but real "things" that appear to be doing no harm. Looking at these sightings and video's with the degree of commitment and backing that is going into SETI or Phoenix could reveal some more hard evidence that these are real, fleeting objects. SETI believers like to use the Drake equation to say that there is life out there to listen to, yet use the same equation (as Richard Caldwell recently has) to show the slim chance of life existing that may have evolved enough to find us. If I was a scientist working on SETI I would sure like that steady income from gullible fanatics who believe we are not alone, but the neighbors never came calling. . .

..`Electronics World + Wireless World' (August 95) carried a small article by John Cronk on a `high performance' antenna for 24cm.

Essentially this antenna was a parabolic reflector in the Y plane and flat in the X plane, fed by a dipole/ref combination at the parabolic focal point...

Although I've only seen the Myers Mode S dish in a small photo in 73, I'd say both of these antennas are similar. However the Cronk antenna had a very narrow reflector ie 60in x 12in approximately (remember its for 1.2Ghz), scaling it down seemed to give it a size narrower than the photo in 73 depicted of the Myers dish. Also, the Myers dish appears to have a reflector construction similar to typical `gridpack' microwave parabolic dishes... (Cronk used mesh!) This would lead me to suspect the Myers dish is a linearly polarised beasty!?

This type of reflector had not previously occurred to me and I'd be interested to hear from anyone with experience of this type of `dish', especially feeding with a small helical element??

What do you actually propose to *do* with these reports that
hasn't already been done?

Anecdotal evidence only gets you so far, because of the
propensity of the human visual system and brain to
misinterpret inputs. A photograph or video can be analysed,
but you can't draw much conclusion from such an analysis
without making a lot of assumptions about the conditions
under which it was taken and the nature of the object being
photographed - and if the object is completely unknown, you
can't make any such assumptions.

At least SETI has a well defined goal and method to
follow. If they find a clear signal that doesn't go
away, they will have something to study. There's no
such method for studying fleeting, unreproducible
events that leave no substantial physical evidence.

Quite true, and with the satellites being circularly polarised, this
amounts to a 3db loss. Don't try to feed that dish with a circular horn,
though. Read on...

>This type of reflector had not previously occurred to me and I'd be
interested
>to hear from anyone with experience of this type of `dish', especially
feeding
>with a small helical element??

A good thought, but every circular polarity feed I have considered using
has a round pattern, unlike a simple dipole. The Meyers dish is fed
properly with its dipole, for a linear signal. What would result with a
circular polarity feed is a lot of signal going around the 'gaps' in the
reflector that would have been occupied by reflector material if it were a
round dish.

This is why the best antenna for AO-13 (and others with CP) is still a one
meter (or larger) round dish with CP feed. Helixes work good, as do
properly constructed tubular feedhorns, and I have also considered a sort
of 'crossed dipole' with a reflector, somewhat like a backfire array. It
all depends on the F/D ratio, but that is getting into another subject.

: What do you actually propose to *do* with these reports that
: hasn't already been done?

I am proposing something along the lines that Richard Caldwell would like to see; scientists with advanced telemetry equipment, IR, UV, radiography and high res FILM (70MM or IMAX) stake out some of the hot spots and gather some high quality images for analysis. Since visual sightings seem to be the norm and not physical contact that is all we have to go on. Which is infinitly more than SETI.

: Anecdotal evidence only gets you so far, because of the
: propensity of the human visual system and brain to
: misinterpret inputs. A photograph or video can be analysed,
: but you can't draw much conclusion from such an analysis
: without making a lot of assumptions about the conditions
: under which it was taken and the nature of the object being
: photographed - and if the object is completely unknown, you
: can't make any such assumptions.

As I stated before an objective, scientific inquiry into the most prolific sightings;ie Mexico City, would yield controlled circumstances and not assumptions and anecdotal evidence.

: At least SETI has a well defined goal and method to
: follow. If they find a clear signal that doesn't go
: away, they will have something to study. There's no
: such method for studying fleeting, unreproducible
: events that leave no substantial physical evidence.

It is an assumption that SETI signals are going to be clear and repeating. The power levels required for interstellar signals that will be of sufficent strength to be above background noise and in the region we are listening to is a great leap of faith. The Drake equation has no solution, only guesses and hopeful assumptions. We have only recently found evidence of other planetary bodies orbiting other stars. Up until that point we had only hypothesis.
What I propose is to study these fleeting objects with the same intent as SETI. The assumption that there are other beings using high power EMF is just as valid as the assumption that UFO's ar ET vehicles. Both deserve study, but the UFO

field has been tainted by the govt. to the point that any serious study gets labeled lunatic just because of the subject matter. I was surprised when SETI got NASA funding because it certainly fits the lunatic criteria. . .

>Is this the best method?

You have a frustrating situation, and I can sympathize with it.
For your peace of mind, the first thing you should try to do is
determine if the equipment is *working*. You can use the Sun as
a known signal source for this. When the dish main lobe transits
the Sun, you should note a marked change in received noise (monitoring
limiter current is the best way to detect this). That'll tell you
the equipment works.

You can boresight the Sun simply by moving the dish until the
shadow of the feed horn is precisely in the center of the
reflector. Note, since almanacs can be used to precisely
locate the look angle to the sun for any day and hour of
the year, you can use this as a cross check to calibrate
your pointing indicators.

Another (much cruder) method of determining if the equipment
works is to take a piezo sparker igniter (available for lighting
gas grills and heaters) and hold it in front of the dish and
spark it while watching the TV screen. If the receiver is working,
you should see noise hits corresponding to the sparks on the
screen.

Now after you know the equipment works, pick a nice strong bird
with several active transponders somewhere near the middle of your
receiving arc. Use a compass, don't forget to allow for magnetic
declination, to align the dish in azimuth with the satellite.
Use a plumb bob and protractor to align the dish in elevation.
This gets you *close*. Now nod the antenna up and down in elevation
looking for a signal. If none is found, move the dish about 2 degrees

in azimuth and try again. Work plus azimuth for a while, and if you find nothing, start looking at minus azimuth. Be systematic. If things are working, you will locate the satellite.

I'm not sure what you're trying to say.

The sensible way to look at this is that this is one solar system of 100 billion in this galaxy alone. That's one in 100,000,000,000. And we know that there are 100s of billions of galaxies. We also now know that planets do exist out there, around other suns. At least some do.

So, no matter how slim the chance for life is, with that kind of immensity one has to be awfully near-sighted to think there cannot be life elsewhere. The sheer numbers make it almost certain.

To me, this is somewhat comparable to saying that Christopher Columbus should have been being amazed to find living things in the New World. Heavens why? The chemistry is the same. The environmental conditions were pretty similar. So why think that life wouldn't exist in the New World?

True, all true. But we have more information than that.

We know that the same chemistry we have here is also present elsewhere in the universe, from spectrographic data. We know that Carbon is a great element on which to base the complicated molecules needed to form life, because it has the +/- 4 valence and because it is still relatively light, which promotes stronger molecules.

We know that carbon-based, complicated molecules (i.e. "organic") stay together in a certain temperature range.

So we have certain parameters within which we can speculate that "life" might evolve (or, for those who must see this in a religious vein, environments in which God could create life).

So, basically, the questions are these:

1. Do we really believe that in the unfathomable vastness of the universe we are the _only_ planet with the attributes needed to support carbon-based molecules?

2. Assuming that the answer to #1 is obvious to most people, do we really think that we are so unbelievably lucky to be the _only_ planet in trillions to have generated life forms?

True, but it's just as invalid to conclude unlikeliness
from inadequate data as it is to conclude likeliness.

The original poster took some data - one in thirty -
and drew a statistical conclusion from it.
I was just commenting that it's not the conclusion
I would have drawn from the same data.

I know this is completely off-topic, but I just *had* to reply.

Garry Bryan wrote:

> I am puzzled by the sceptics who back SETI which has zero
> evidence for interstellar radio contact yet immediately
> disregard the sightings collected by Project Bluebook and
> the conclusions that UFO's are no threat.

Garry,

There is a simple explanation for this. The people you refer to do not "immediately" disregard UFO sightings. We begin by being impressed by a sighting report. Then we learn the details, and discover that is was something totally ordinary. Then we are impressed by a different sighting report. When details of this new sighting become available, it turns out to be a different totally ordinary thing. Then we're impressed by yet another sighting report, but eventually find that it has some other totally ordinary cause. After this happens a few times, we are less easily impressed, and only pay attention to those reports that seem most credible. Yet, it still happens. As soon as solid data is available, it becomes obvious that the sighting has nothing to do with aliens. After ten or twenty such reports -- each claiming to be ultimate proof of aliens -- *all* turn out to be extremely sloppy interpretations of the evidence, we tend to disregard new reports.

The sceptics are the people who've already been through this. That doesn't cause us to be any less sure that the Universe is teeming with life, and that it is worth seeking.

2234. Apollo beep tone?

Newsgroup: rec.radio.amateur.space
Date: 1995-11-02 00:00:00 UTC
From: spkatzmann@ccgate.dp.beckman.com
Message-ID: <spkatzmann.25.00113D1D@ccgate.dp.beckman.com>
Source record: 23894

Does anyone know what frequency and duration the Apollo communications tone is? Thats the short beep that is heard after someone at Houston ground control or on the spacecraft says transmitts a voice message.

Steve.

>Tnx, Greg, KD4HZ

The simple answer - 146.64 Mhz. the W5RRR 2 meter repeater. I've
listened to it quite often when I'm in the Houston area. You'll hear
bunches of hams who work at the Johnson Space Center on that repeater,
including some of the ham astros.

There is an index of archives that have Satellite Tracking software in
the Reference page of the Shuttle Elements Mailing List web pages. The
URL is:
http://www.cts.com/browse/garym/elements/references.html#software

The best satellite tracking program (IMHO) for Windows 3.1 is SatSpy. The
web page for it tells all about the program at, and you can download it too
(it's shareware):
http://www.usa.net/acappella/satspy/satspy.htm

Dog gone it, Brian... I am generally supportive and appreciative of your contributions on these subjects. However, try to refrain from making unsupported assumptions. Some birds, such as seagulls ARE so reflective that in the mid afternoon on a clear warm summer day, with the sun in your back and cirling seagulls a mile in the distance, they can appear to be a shiny plane with the sun reflecting off of silver surfaces. I have striking memories of the first time I witnessed this. I was riding a bus home and casually looking in the direction of a private airfield a mile away. I saw what I first believed to be the sun reflecting off of a private plane doing peculiar loops near the ground. Since the manuevers appeared too dangerous for a pilot to attempt, I watched more carefully. Over the next couple of minutes, I began to resolve the individual birds and realized that it was a flock of seagulls swooping into a fresh pasture before breaking up to seek their own snacks.

Now, in no way do I assume that the Utah film resembles what I saw. Nor do I assume Oberg has any foundation for his deflecting "explanation." I only wish to discourage you from being too careless in dismissing some possible explanations. I am certain that, on a bright sunny clear afternoon, a few dozen white seagulls, ducks or geese could easily be described as a bright reflective ovoid, as large as a pea held at armslength, making erratic and incredible motions before dissappearing suddenly.

Oh... I would have edited the newsgroups line and sent this to the appropriate newsgroup if my Netcom NetCruiser connection hasn't been so erratic and unreliable. Since the reliability of any Internet Service Provider is a valid topic for any newsgroup, I decided not to edit it.

If Netcom insists in providing such lousy service, I will be forced to find (easy enough) another ISP. And I will feel it my duty to warn others of the problems I have with Netcom...

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Yes, but the USAF investigating scientists ruled out birds because no
birds are *AS* reflective as those objects. Furthermore, as the objects
moved across the sky, they ruled that the brightness was due to
self-luminescence, not reflection. I imagine that's an easy conclusion
to make, given that reflection would be easy to discriminate from
self-luminescence given that the objects traversed a large portion of the
sky, and thus a large variety of angles from the sun.

I agree that some birds are very reflective, but the USAF analysis was
thorough and they ruled out birds for two sound reasons.

What USAF analysis?

Besides, don';t you think that UFO research has improved since 1952, with the accumulation of a LITTLE more experience?

You can always tell a fairy tale by the phrase, "Long ago and far away...". And lo and behold, UFO buffs love the stories that are from long ago and far away. Coincidence?

I'm with you, Greg. In fact, if you don't insist on "to high levels" means, life has been on this planet for a good chunk of its total existence. Maybe not mammals or vertebrates, but life nonetheless. We're talking hundreds of millions of years in a planet that is 4.5B years old, anyway.

Why isn't it just as likely that the environmental conditions simply had to settle down to something friendly to organic molecules? And that this same process could be repeated a zillion times elsewhere?

: >was not stupid.
:
:
: Actually, I think the idea that life does not exist anywhere else is a
: more far-fetched idea. The universe is a mighty big place, and it seems
: likely that ours is definitely NOT the only solar system in it. It would
: seem most unlikely that the Earth is the only planet in all the universe
: where intelligent life actually evolved.
:

Sorry, I should have been more specific. I meant that it is not a stupid
idea to think that aliens have been here , on Earth, whether its true or
not.
I totally agree that it would be nearly impossible for us to be the only
intelligent life forms in space. Any scientist would agree with that.

>(Regarding GeeK Smiley)Just like a gullible debunker nut to dredge up
skeptic fantasies that were debunked decades ago by objective analysis.

-Earth to GeeK, Earth to GeeK. Poor GeeKy you're so sincere when you
try to be condescending while making an ass of yourself. Brian, I think
the only thing that is touching about this exchange is probably GeeKy
touching himself. One hand on the keyboard, one hand playing
submarine!:) Anyway, Brian, you've destroyed both GeeKy and Oberg, once
again, but don't expect them to stop crying. Oberg's too busy counting
how many words he's had published to waste time paying attention to the
actual gist of the argument and GeeKy's too busy declaring victory to
accomplish anything. Do you think GeeKy has an actual Oberg
cheerleading outfit? I say yes!:)-

Anybody out there have one of these classics: Eldico SSB-1000F Linear amplifiers? I'm experiencing a peculiar problem with mine and would appreciate some insights. If you have any familiarity with this almost antique, please contact me. Many thanks, John, KI7JB.

You are refering to Keplerian elements; mathematical descriptions of orbits. Keplerian elelments can usually be picked up off of packet BBS's and from numerous landline BBS's. NASA SPacelink is a good source, as is Compuserve, Celestial, and others. Check out space technology newsgroups on the Internet.

2255. NORAD Two-Line Orbital Element Set: Space Shuttle (95307.21971007)

Newsgroup: rec.radio.amateur.space
Date: 1995-11-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.815453801@cougar>
Source record: 23774

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

You're getting worse than Dean. At any rate, I found out tonight that BOTH Oberg and I are right. I was right that the analysis was performed under the direct command and control of Bluebook. Oberg was right because a Navy group of scientists analyzed the footage -- at the request of Bluebook.

Nevertheless, they ruled they were not birds. It's easy to rule out birds because of the perfect positioning relative to each other across a large portion of sky, which doesn't happen, but mostly because on a sunny day, it's easy to tell when something crossing a large portion of sky is self-luminescent or reflecting sunlight. Plus, NO BIRDS have such a high albedo. And Dr. J. Allen Hynek also said that the Robertson Panel hastily slapped the bird explanation on the film because, of course, it *had* to be something terrestrial, evidence to the contrary be damned.

Just like a gullible debunker nut to dredge up skeptic fantasies that were debunked decades ago by objective analysis.

Sure they were birds (IMHO) -- look at all the birdbrains that still are impressed with them. If you want to discuss this further, move it over to alt.alien.visitors where it has always belonged, and stop rampaging through a newsgroup that isn't interested.

Hi there,

Yes I am afraid its me again - but initiating my own thread!!!

I now I cannot compete with HRT - heaven forbid! - but for all those
who might be interested we have arrived on the Web!

Our Web pages can be found at:

http://www.taynet.co.uk/~gdx/ag/vhfcomm.htm

Initially our pages are quite simple, in order to guage response etc.
So, please let me have your comments (not too unkind please!) and
suggestions and I will see what can be done.

Even better - how about subscribing!!!!!!

73 ... Mike

If that's your best defense for the bird hypothesis, then the case is
closed on this newsgroup. Maybe it would make you happy if I said
"concluded" or "determined" instead of "ruled".

Sorry, but Bluebook had scientific consultants. These weren't drill
sergeants analyzing films.

2264. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1995-11-04 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.815453834@cougar>
Source record: 23915

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)
```

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293

Help,

I am just starting in the ham world, and wish to buy or trade for an FT 757-GXII...
Please email me if you want to sale or trade one, I will trade a brand new night vision unit(cost $685.00) for it.

NITE EYE2@aol.com

Thanks...

I own a SONY SW 77 and listen a lot of far situated channels, like
Africa Australia, and so on it a practical set that you can carry
with you on trips the built in antenna is not bad , I can listen
to radio amateurs also.For the price I find it OK, of copurse it
is not as good as ICOM 77 but it is cheaper and portable... tou
can program a 100 channels with their names appearing in clear.

>life elsewhere. The sheer numbers make it almost certain.

There are approximately 10^23, that's 1 followed by *23* zeros, ways for carbon and hydrogen atoms to combine. Only 4 of those combinations are precursors to self-replicating life. If life arose from a purely random combination of those elements, then "billions and billions" of stars aren't enough to make it likely it happened twice.

Now it *appears* that those precursor combinations are preferred states, so that the odds are actually much better, indeed almost a certainty. But we can't be *sure* of that from Earthly evidence because Earth's hydrocarbons have all been contaminated in the course of 4 billion years of life. We need to see a non-Earthly lifeform before we can be sure that the odds are actually good for life to arise elsewhere.

And even if life is likely elsewhere, we have no idea what the probability is for that life to have evolved intelligence and the handling of tools. We know it happened *once*, but we don't know what the odds are of it happening twice. It could be that the sequence of events that led to us is a 1 in 10^100 chance. If that's true, we're alone. If the odds are as good as 1 in 10^9, however, we likely aren't alone in the universe, but we may still be alone in this galaxy. If the odds are 1 in 10,

then the galaxy is teeming with life like us. I find that
rather unlikely, however. LIfe may be common, but life that
is tool using and intelligent doesn't seem as inevitable a
result of evolution.

More data points would allow us to extrapolate a curve, but
one data point tells us almost nothing. All it says is that
intelligent life is *possible*, but says nothing about whether
it is a 1 in 10^100 fluke, or a 1 to 1 dead certainty.

I don't know about "dyed-in-the-wool" wxsat enthusiasts, but the same
question could be asked of amateur satellite users. Why bother when you
can pick up the phone? 'cuz it's FUN!

I have used the multifax card and receiver with excellent results. There
are some other systems that do work but not with the same resolution or
stability. For the extra bucks you can't go wrong. Try their BBS at:

1-(716) 425-8759

See them at DAYTON.

Beware the cheep solution.

Im looking for a SatTrack IV controller or a TAPR Trackbox for sale.
Currently using a SASI Sattracker with tuner for my IC820, but its not
supported by WISP. Have a DSP2232 sitting here collecting dust til I get
the system set up.

For me, it has been for the fun and challenge of doing it directly plus the extra things like color thermal overlays that my software allows me to do that I could not do with a downloaded image.

73,

ok Bill, I can accept that...but...You CAN overlay and enhance any downloaded
pic from the net. BTW...IU/Purdue uni has ALL pics from Sat to nexrad etc and
many are already enhanced. I guess they took the fun out. :))

>jtyoung@u.washington.edu

Maybe I can help. Is this the amplifier with a
pair of 4CX250's and a small 1 inch CRT for
monitoring the RF trapezoidal waveform?? I worked
as a student engineer for Eldico during the
summers of 1954,1955, and 1956. At the time I
assembled the first production prototype of an
amplifier as described which I remember being
shipped to General Curtis LeMay or Arthur Godfrey
for some early SSB demos to the USAF. What is
your specific question?? Why was this posted to a
space oriented newsgroup?? The amplifier is for
HF.

I am looking for any information on the 400bps PSK modem beacon on
AO-13. Does somebody perhaps have a scanned file of one of the
articles that were published in the magazines a few years ago ?

Danie

>think that we are so unbelievably lucky to be the _only_ planet in trillions
>to have generated life forms?

Belief is outside the purview of science. You can believe that the probability of life is large, small, or anything in between, but the only real data you have comes from the solar system, and specifically from this planet. The fact that the same elements are present throughout the observable universe does *not* mean that the same results occurred everywhere, or even anywhere. Like you, I believe that life almost certainly exists elsewhere, but I refuse to try to justify that belief by attempting to generate probabilities from insufficient data. Since we have only speculation regarding the origin of life

here, there is no way we can project events here on to the universe at large.

2283. WinOrbit 2.7 (tracking software) available

Newsgroup: rec.radio.amateur.space
Date: 1995-11-07 00:00:00 UTC
From: Carl Gregory <cgregory@uiuc.edu>
Message-ID: <47o7i6$67b@vixen.cso.uiuc.edu>
Source record: 23793

The latest version of WinOrbit (2.7) is now available on oak.oakland.edu
and ftp.amsat.org. It may be available soon on ftp.seds.org, also.

This program is free (although a plug for donations to the AMSAT Phase
IIID program is included). A description of changes, and an overview of
the program, are given below:

New Features in version 2.7
----
* Full state vector information (including velocity components)
in both EFG and ECI coordinate systems. Import state vector
files.
* Alternate satellite information databases such as "The
Satellite Encyclopedia" may now be accessed directly.
* "Phase" information group in the Info Window is now the "Orbit"
group, and includes the Squint Angle.
* Crude calculation of spacecraft antenna and observer antenna
pattern loss. Groundplane, turnstile, isotropic, and
steerable antennas are supported.
* New window arrangement option: "Stack", in the Window Menu.
* The lines of latitude and longitude can now be turned off to
create cleaner maps for export.
* Improved timekeeping for real time mode on slow computers.

Bug fixes in 2.7
----
* Orbit number (Rev) and Mean Anomaly (MA) now updated properly
with SGP/SGP4 models.
* Updating of Keplerian Elements with SGP/SGP4 models improved.
* Fixed crash when Sun or Moon selected while using non-USA date
formats.
* Fixed bug preventing proper element update after propagation
to specified epoch.

Program Overview

WinOrbit is a program for computing artificial Earth-satellite
position and visibility, with the Amateur Radio satellite
operator in mind. It was written for the Microsoft Windows 3.1
operating system. WinOrbit is free (not shareware). The
latest version is 2.7.

The principal feature of the program is a series of tracking
windows, one per satellite, which display the current position of
the satellite and the observer on a simple world map, together
with information such as footprint, past ground track, bearing

(azimuth), distance, and elevation above the observer's horizon.

Additional features include:
* Simultaneous tracking of up to 20 satellites.
* Sun/Moon tracking built in.
* Real-time, pseudo-real-time, and manual calculation modes.
* "View from space" map presentation showing what a particular satellite sees.
* Selectable tracking detail, including doppler shift, free-space path loss, satellite and observer antenna pattern effects for a single satellite.
* Display sun position for eclipse determination, and other observers for mutual visibility.
* "Show DX" for all stations within the satellite footprint, and "what's up" for all satellites visible at observer QTH.
* 4 different orbital calculation algorithms (selectable).
* Tracking data (Keplerian element sets) read directly from standard, off-the-air bulletins in three different formats (up to 500 satellites). No pre-processing is needed, just grab a bulletin file, headers and all. Reads AMSAT, NASA or vector formats.
* Propagation of pre-launch keps and other element updates.
* Utility functions for modifying and comparing published element sets, including post-launch updating of pre-launch elements, and saving composite data files compiled from various sources.
* Observer (QTH) data (latitude, longitude) may be imported from a simple text database (up to 1000 locations). Entry by grid-square or mouse-on-map is possible.
* Flexible entry of latitude, longitude, date and time.
* Printing of tables of tracking data (Ephemerides) in several formats. Printing does not interrupt tracking. Output may be directed to disk file or printer.
* On-line help, including glossary and direct lookup of text information about all Amateur satellites from the map windows. All hamsats since Oscar I included.
* Standard Windows interface for all functions - no commands to memorize. Both mouse and keyboard can be used for most functions.
* DDE server interface to tracking-antenna hardware controllers.

This program is available via internet, by anonymous ftp from:
ftp.amsat.org in /amsat/software/windows/tracking/winorb27.zip
oak.oakland.edu /pub3/hamradio/pc/satellite/winorb27.zip
ftp.seds.org /pub/software/pc/sat/winorb27.zip

The Microsoft file VBRUN300.DLL is required. It is available separately (and free) from many of the same sources.

Future enhancements will include (depending upon interest):
Bug fixes (when reported by users)

Corrected/augmented satellite information supplied by users.
Enhanced satellite database maintenance features
Additional table formats (as requested by users)
Fancier map formats
Speedups

Why do people use CW when there are perfectly good phones on their walls?
Also the resolution is much better. We also like to image some areas not
covered in high resolution on servers. When have you seen sun glints off
rivers on the net? We are talking seeing ponds and citys. I have a great
image of a crater in Canada and infrared images of power plants in NY. On
the right pass I can image Greenland. It's just neet!

Date: 1995-11-07 00:00:00 UTC
From: "Norman L. Hannon" <73614.2047@CompuServe.COM>
Message-ID: <47nodc$1hv$1@mhafn.production.compuserve.com>
Source record: 23799

Anyone have news on the status of Radarsat. I heard that the
launch went well and early TLM indicated no problems.

2290. Moon track software

Newsgroup: rec.radio.amateur.space
Date: 1995-11-07 00:00:00 UTC
From: "Norman L. Hannon" <73614.2047@CompuServe.COM>
Message-ID: <47noij$1hv$2@mhafn.production.compuserve.com>
Source record: 23800

I have need of source code for a moon track algorithm. I know
that programs such as Instant Track include moon tracking (az/el
angles) information; but I need the algorithm itself. Anyone know
where to look?

In article <cas.350.00595E68@ops1.bwi.wec.com>, cas@ops1.bwi.wec.com (Bob Casanova) writes:

>Belief is outside the purview of science. You can believe that the probability
>of life is large, small, or anything in between, but the only real data you
>have comes from the solar system, and specifically from this planet. The fact
>that the same elements are present throughout the observable universe does
>*not* mean that the same results occurred everywhere, or even anywhere. Like
>you, I believe that life almost certainly exists elsewhere, but I refuse to
>try to justify that belief by attempting to generate probabilities from
>insufficient data. Since we have only speculation regarding the origin of life
>here, there is no way we can project events here on to the universe at large.

In the absence of real evidence of life elsewhere, of course, all one can do is speculate. It's not wrong to speculate; it's not even "unscientific." In fact, it's what leads to exploration.

I have four items to offer with respect to this issue:

1. We know that life on earth happened. Therefore we know that the probability of life forming is greater than 0. But we do not know of any limit to the size of the universe. So, speculating, we have a non-zero probability of life forming and a virtually limitless number of samples out there (i.e. "opportunities"). Makes it seem almost ludicrous to be pessimistic about this.

2. We know that chemical reactions happen elsewhere just as they do here. I mean, for instance, our sun does not operate on principles that are in any way unique. Nor are meteorological phenomena different here from what they are in other planets we know about. So that's more evidence that this solar system and planet are hardly going to end up being the unique one among trillions.

3. We know that water exists elsewhere in the universe (e.g. in comets), so that important ingredient is not unique to Earth.

4. And finally, to me this is a little bit like picking up a grain of sand on one beach, just one grain, and swearing that _this_ grain is fundamentally different from all other grains of sand in every beach on earth. Failing chemical analysis of even a single other grain, I suppose one might wonder if it were true. But most reasonable people would _speculate_ that bullshit, this grain is probably very similar to zillions of others.

I have just come out with a new version of my DOVE satellite
decoder program (V2.0). It will decode the telemetry data that comes
from the DOVE amateur radio satellite. In this release are numerous
bug fixes and some new graphing capabilities. It requires windows 3.1,
a packet TNC and a 2 meter rig. This program is FREEWARE and is
available from the following sources:

Internet FTP
ftp.amsat.org /amsat/software/windows/telemetry/dovedv20.zip

RadioSport BBS
619-279-3921 dovedv20.zip

Mail
In the US and Canada send $1 and I'll provide disk, mailer, and
postage. Please specifiy disk size (5.25, 3.5) and send to:

2293. Re: Moon track software

Newsgroup: rec.radio.amateur.space
Date: 1995-11-08 00:00:00 UTC
From: Carl Gregory <cgregory@uiuc.edu>
Message-ID: <47r7kg$8hm@vixen.cso.uiuc.edu>
Source record: 23803

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

Precisely. Haven't we found hydrocarbons on another planet already?

I think that in the future we'll look back at this period of fledgling space exploration and the doubts about other life existing and really feel we were being unbelievably silly. Virtually identical to thinking that the whole universe is built around Planet Earth. Most people (not all) have given up on that notion.

>More data points would allow us to extrapolate a curve, but
>one data point tells us almost nothing. All it says is that
>intelligent life is *possible*, but says nothing about whether
>it is a 1 in 10^100 fluke, or a 1 to 1 dead certainty.

We do have data points for other chemicals, of course. They exist out there just as they do here.

Notes
-----
1. NORAD Catalog Number is also known as U.S. Space Command (USSPACECOM) object
number and NASA catalog number.
2. No orbital plane position = satellite no longer operational.
3. Clock: Rb = Rubidium; Cs = Cesium.
4. Selective Availability (S/A) had been enabled on Block II satellites during
part of 1990; S/A off between about 10 August 1990 and 1 July 1991 due to
Gulf crisis; standard level re-implemented on 15 November 1991; occasionally
off for test and other purposes. Currently, PRN15 and PRN28 appear to have
little or no S/A imposed.
5. Anti-spoofing (A-S) was activated on 94-01-31 at 00:00 UT on all Block II
satellites (ref. NANU 050-94042); occasionally off for test and other
purposes. A-S was turned off on all satellites at 20:00 UT on 95-04-19 and
back on on 95-05-10; off again between 95-06-19 and 95-07-10; and between
95-10-10 and 95-10-31. A-S has been off on PRN28 since 95-02-21.
6. PRN number of SVN32 was changed from 32 to 01 on 93-01-28.
7. PRN05 and PRN06 are equipped with corner-cube reflectors for satellite laser
ranging (SLR). SLR tracking of the satellites will permit onboard clock
errors and satellite ephemeris errors in GPS tracking to be differentiated.
8. The decommissioning date for PRN06/SVN03 is the date of termination of
operations of this satellite (ref. USNO) and is about 3 weeks later than
other published dates for "deactivation".
9. PRN12 is in declining health, primarily due to power supply problems. It
will be decommissioned within the next year. Before it is disposed of, the
satellite will undergo a period of end-of-life testing to help the Air Force
Space Command (AFSC) develop better ways to operate future GPS satellites.
10. The AFSC Constellation Status Assessment Team has recommended that the next
launch, into the C-plane, be made in April 1996.

Hi Waldemar,

I had a packet-QSO with R0MIR on 145.550 MHz somewhere last june.
It took me a while to get through with my portable, but it can be done!
However, R0MIR isn't always on the air. They periodically shut down
their ham gear (to conserve power I guess).

73 de Peter, ON1ACY.

>Robert KO6PL

The TS-790A has several *glaring* faults, but the worst one for satellite
use is that you can't use the narrow filters in the subband receiver.
That's the receiver you *use* when listening to the satellite because
you're transmitting on the main band unit. Major oops! Also, to make
it track tune in sat mode, you have to *hold the SAT button in*, major
oops. And the thermal design really sucks, the 70cm output module gets
very hot under normal use. The main unit receiver is pretty good, but
you don't use it for satellite.

The FT-736R is a bit long in the tooth, and can't do independent
dual band receive, but for satellite use it is still the champ.
It works the way you *need* it to work.

2305. Mods for Icom IC-736

Newsgroup: rec.radio.amateur.space
Date: 1995-11-09 00:00:00 UTC
From: yingst@knighted.com
Message-ID: <47u44i$les@crier.knighted.com>
Source record: 23815

Does anyone have any mods for the ICOM IC-736? I'm looking for a way to
turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna). I'm also looking for a way to
improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).
I had a IC-737 that had the same problem with the audio,
just not sounding quite right. I am also interested in any other mods
for the Icom IC-736. Please send any replies to yingst@knighted.com Note:
If you post a reply into this newsgroup I proably wont get it,
my internet provider only holds news for 1 day. Thank You. Harry

The idea (detailed below) that we can assume much about whether life exists on other planets based on two premises (life exists on earth, so it is possible, and the universe is big) is ridiculous. Think about the beach analogy. Imagine that it is a pebbly rather than sandy beach you are sitting on. You reach down and the first thing you pick up happens to be a dime. Would you assume that the beach was made of dimes? Of course not. You could only begin to draw any type of conclusion if you started thinking about a number of possiblities. Granted, where astronomy is concerned these must be ROUGH estimates. But a margin of error of any less 50% gets us closer to the answer of a yes/no question.

If the best estimates yield a prediction of between 50 and 100,000,000 other planets with life (made-up numbers) 50 being the extreme conservative number, we've got an answer.

I am reminded of a gentleman who knew the letter if not the spirit of statistics. He read one day before making a trip by plane that the probability of of someone bringing a bomb onto a plane was 1:250,000. While this was low, he wasn't satified. He brought his own bomb on the trip, certain that the probability of there being TWO bombs on the plane was 1:62,500,000,000--a much safer risk.

Just a correction to WinOrbit's help file: TSE's web site is now
http://www.tele-satellit.com/tse/

You may also get the package from
ftp://ftp.tele-satellit.com/pub/tse/tse032.zip

WinOrbit together with TSE is really great! Give it a try!

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

ARLS022 Next shuttle all licensed

Space Shuttle mission STS-74 is scheduled for lift-off at 1255 UTC on Saturday, November 11, with all five crew members holding Amateur Radio licenses.

NASA astronaut James Halsell, KC5RNI, and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ, both received their licenses in recent days, and both plan to participate in Shuttle Amateur Radio EXperiment (SAREX) activities during the STS-74 mission.

Halsell is the shuttle's pilot, and Hadfield is a mission specialist.

Shuttle Atlantis's commander for STS-74 is Ken Cameron, KB5AWP, who used Amateur Radio from Atlantis during STS-37 in April 1991 and from Discovery during STS-56 in April 1993. This will be the third mission Cameron has flown where the entire crew are licensed radio amateurs.

Other STS-74 crew members are Mission Specialist Jerry Ross, N5SCW, who was also a member of STS-37, and who operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR, who used ham radio aboard Columbia during STS-58 in October/November 1993.

For more information on the SAREX program, visit the SAREX home page on the World Wide Web at

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on schedule today for liftoff on Saturday, November 11. The seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing

is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a

greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov

BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

ARRL's (Newington, CT) Amateur Radio station (call sign W1AW) transmits news bulletins (9:45 PM, 12:45 AM EST) on HF bands at 1.855, 3.99, 7.29, 14.29, 18.16, 21.39, 28.59 and in the Connecticut area on VHF at 147.555 MHz. W1AW bulletins are also forwarded on packet.

Members of the Goddard Amateur Radio Club (Greenbelt, MD) re-transmit live, shuttle air-to-ground audio over the amateur frequencies from their club station, WA3NAN. To listen-in, tune to Amateur Radio high frequency (HF) bands at 3.86, 7.185, 14.295, 21.395, and 28.65 megahertz (MHz) and in the Maryland/DC area on a very high frequency (VHF) band at 147.45 MHz.

The ''SAREX Bulletin'' contains additional general information on SAREX. This document may be obtained electronically from many of the popular on-line electronic services.

hello,

I implemented lately a tracking algorythm in C language on a
80C535. Its controlling my 6 times 33ele on 70cm and did its job
well during the ARRL EME contest last weekend. The code is
standard C, source available.

This C code was converted from a TURBU-PASCAL source. So this
source is also availabe.

You should mail me a short mail if you need it.

>Robert KO6PL

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

Ham operator Jokes:

1. What is the thinnest book in the world?
What hams know about women.

2. How does a ham take a bubble bath?
He eats beans for dinner.

3. What's a ham's idea of foreplay?
A half hour of contesting.

4. How can you tell if a ham is sexually excited?
If he's still breathing.

5. How many hams does it take to change a roll of toilet paper?
We don't know...it has never happened.

6. What's a ham's idea of helping with the housework?
Lifting his leg so you can vacuum.

7. What does a ham consider a seven course meal?
A hot dog and a six pack of beer.

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

Date: 8 Nov 1995 21:32:00 GMT
From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

The best source for such material is AMSAT's ftp file server:

ftp://ftp.amsat.org

which is also pointed to by AMSAT's WWW site

http://www.amsat.org

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

Does anyone know if there is a way to get these guys to edit their newsgroup header so that the responses to the SPAMED post don't end up here and in sci.space.shuttle instead of just in alt.paranet.ufo? Can an administrator somewhere filter out this junk?

Ken K5MBV mbv@ti.com

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

Subject: WTB: SatTrack IV or Trackbox

Im looking for a SatTrack IV controller or a TAPR Trackbox for sale.
Currently using a SASI Sattracker with tuner for my IC820, but its not
supported by WISP. Have a DSP2232 sitting here collecting dust til I get
the system set up.

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

Fred Sterling

Date: 8 Nov 1995 21:32:00 GMT
From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

>Robert KO6PL

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on schedule today for liftoff on Saturday, November 11. The seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio

amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International

Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time,

and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov

World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-

page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

-> PLEASE REMOVE REC.RADIO.AMATEUR.SPACE OUT OF THE UFO LOOP.

-> rec.radio.amateur.space. It is a great waste of bandwidth. When you post a
-> reply please. I SHOUT PLEASE, look up at the top of the page where it says
-> Newsgroups. These are all the places your UFO stuff is going to. We at
-> rec.radio.amateur.space are not interested.
->

Take a pill Glen, if you dont like it learn how to use a 'KILL' file to
stop the thread from showing up on YOUR screen. Your comment about "a
great waste of bandwidth" shows an incredible ignorance of how the net
works. If your concerned about bandwidth go take your soapbox to the alt.
hierarchy.

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

From: rbickel@ccnet.com (Robert Bickel)
Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.

Thanks for your comments.

The best source for such material is AMSAT's ftp file server:

ftp://ftp.amsat.org

which is also pointed to by AMSAT's WWW site

http://www.amsat.org

>Robert KO6PL

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on
schedule today for liftoff on Saturday, November 11. The
seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle
Amateur Radio EXperiment (SAREX). The project has flown on 19
previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously
used ham radio from Atlantis during STS-37 in April 1991 and from
the Shuttle Discovery during STS-56 in April 1993. This will be the
third mission Ken has flown where the entire crew are licensed radio
amateurs. The other members include Mission Specialist Jerry Ross,
N5SCW, who was also member of STS-37 SAREX crew, and operated ham
radio aboard the STS-55 Columbia mission in April/May 1993; and

Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under
Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov

World Wide Web: http://www.amsat.org
Johnson Space Center Amateur Radio Club
BBS: (713) 244-5625
Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

Didn't your hear the Packet-Transmissions from R0MIR on 145.550 MHz either?

I heard them almost every day here in northern Germany in the past two
weeks. It was a rather strong signal.

Last time I heard Mir was today at 11:30 UTC.

I read something about Thomas Reiters problems with the HAM-equipment in
the 'Deutschlandrundspruch' released by the German amateur radio league
DARC. It is in german language. Let me know, if I shall e-mail it to
you.

The first QSOs with German stations were made by Thomas (DP0MIR) on Oct.29
at 145.800MHz.

Hallo Waldemar!

kebsch.pad@sni.de wrote:

kp> Is anyone out there who had a QSO (Phonie-FM) with DP1MIR?

The following excerpt of the Space-News from Oct.30 may be interesting
for you (and others) too:

* EUROMIR 95 - FAX FROM DP0MIR *
==========
The following fax from Thomas, DP0MIR (DF4TR) was received on 12-Oct-95
by Thomas, DL2MDE, of the Ham Radio Group at Deutsche Forschungsanstalt.
Here he describes the actual situation onboard concerning ham-activities,
and comments by the German Ham Radio Group are also included.

"Now HAM-radio: this is a sad story! The old station" (Icom 228) "is
working, but only in simplex mode. Apparetly there is a way of channel-
switching (i.e. one frequency for transmitting and another one for
receiving), but I have no clue how to select or activate this - and of
course, there is NO F...DOCUMENTATION ON BOARD, neither for the old
station nor for the new one!!!" (TM733)

We from DF0VR try to send several information on board
but have problems with packet radio (see below) !!
Direct ways also do not solve the difficulties !!

"Two weeks ago on Sunday I installed the new station and a few days later
the new power supply (everything extremely improvised - cables hanging
around, cables I soldered together...)."

He does whatever is possible, several stations from W, VK,
ZL, G confirmed this fact to us. Sometimes Thomas also
switched on the digital voice memory.

"The new station is working in the voice mode, but the modems cannot be
initialized- one of the new modems has a connector for the 2nd serial
port of the computer, which doesn't fit (two "mamas");

There is an antenna switch supposed to be onboard - we can't find it;
There is a 'duplexer-box', which allows to run the new station in the
two frequency bands (145+430 MHz) over one antenna - we can't find it;

Radio Amateurs already ask us since we are here, when the new station will
be installed and when we can run in duplex mode and when they can use the
70 cm band (430 MHz) and, and, and...

Then the guys in Oberpfaffenhofen request a special frequency for making packet-transfer, but Sergei and Juri don't like to change the frequency which is almost the whole day (145.55), because the whole rest of the world is communication with us - or better - with the packet-controller on this frequency".

Skeds between DP0MIR and DF0VR on dedicated frequencies are needed to transmit special information for the installation of equipment, international frequency agreements, ham operation onboard, skeds for school stations... If you should listen to such a contact please don't try to speak with Thomas. This information transfer is of interest for all of us!!!!!!

"Last week I had a contact with a guy in southern Germany- not one of the OBI-guys" (OBI = call of radio beacon from Oberpfaffenhofen)", who seemed to be already a little bit embarrassed, because the new equipment is not yet running. And then he asked me, if I am feeling better in the meantime! I told him, that I feel absolutely great, and asked why I should feel better. He told me, he had heard that I was quite ill, but am on my way of recovery! No comment on this s*** (sorry!).

For some nights we had selected the frequency which was requested by OBI- I even set up a message for Kieselbach" (Thomas, DL2MDE) "on the controller - but they say, they cannot connect! The whole world can connect to our station, but apparently the signals from Germany are reflected or attenuated in a magic way. I am feeling bad for these guys, because they seem to have some expectations, which we can't fulfill yet. I think it would be certainly good to have the uplink-capability from OBI, but at the moment it looks not so bright."

In the last time visibility of MIR for DF0VR was only in the night time (TsUP-time). We tried to connect to R0MIR-1, but at this time we only heard the packet beacon from MIR. Connecting was not possible. We have information that tonights the AF level onboard is reduced. In our opinion this AF level is not sufficient to connect to the BBS. Presently we try to inform Thomas about this fact.

[Info via Thomas, DL2MDE, and Joerg, DL3LUM]

Learn how to use a 'KILL' file to stop the thread from showing up on YOUR screen if you find it so offensive. We dont need censorship on the Net.

Indeed. Since the notes are crossposted, only one copy is sent to
each system, not a copy for each group in the header. No extra
bandwidth is consumed. Now since the thread seems to have evolved
into a SETI discussion, it is also on charter for this group because
amateurs are participating in the SETI search.

Gary

SB SPACE ARL ARLS022
ARLS022 Next shuttle all licensed

Space Shuttle mission STS-74 is scheduled for lift-off at 1255 UTC
on Saturday, November 11, with all five crew members holding Amateur
Radio licenses.

NASA astronaut James Halsell, KC5RNI, and Canadian Space Agency
astronaut Chris Hadfield, KC5RNJ, both received their licenses in
recent days, and both plan to participate in Shuttle Amateur Radio
EXperiment (SAREX) activities during the STS-74 mission.

Halsell is the shuttle's pilot, and Hadfield is a mission
specialist.

Shuttle Atlantis's commander for STS-74 is Ken Cameron, KB5AWP, who
used Amateur Radio from Atlantis during STS-37 in April 1991 and
from Discovery during STS-56 in April 1993. This will be the third
mission Cameron has flown where the entire crew are licensed radio
amateurs.

Other STS-74 crew members are Mission Specialist Jerry Ross, N5SCW,
who was also a member of STS-37, and who operated ham radio aboard
the STS-55 Columbia mission in April/May 1993; and Mission
Specialist Bill McArthur, KC5ACR, who used ham radio aboard Columbia
during STS-58 in October/November 1993.

For more information on the SAREX program, visit the SAREX home page
on the World Wide Web at

http://www.nasa.gov/sarex/sarexmainpage.html

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the
algorithms in the book - there are several timescales, described
elsewhere in the same book.

Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood
TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm
sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

The best source for such material is AMSAT's ftp file server:

ftp://ftp.amsat.org

which is also pointed to by AMSAT's WWW site

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

Subject: MIR HAM-ing on 2m/70cm ???

Hi,

approx. each day I am checking the announced frequencies, when MIR is
flying over Europe. Until now I don't have heard anything. Is anyone
out there who had a QSO (Phonie-FM) with DP1MIR?

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on
schedule today for liftoff on Saturday, November 11. The

seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW

William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov

BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* STS-74 NEWS *
===============
NASA managers have set Nov. 11, 1995, as the official launch date for the STS-74 mission -- the second in a series of missions between the U.S. Space Shuttle and the Russian Space Station Mir. The primary purpose of the Space Shuttle Atlantis STS-74 mission is the installation of a docking module that will improve clearance between the Shuttle and Mir's solar arrays during subsequent dockings. Atlantis' crew also will return to Earth experiment samples, equipment for repair and analysis and products manufactured on the station.

The Nov. 11 launch of Atlantis is planned for approximately 7:56 AM EST (1256 UTC) from Kennedy Space Center's Launch Complex 39-A. The actual launch time may vary by a few minutes based on calculations of Mir's precise location in space at the time of liftoff. The available launch period, or "window" to launch Atlantis, is approximately seven minutes each day.

The STS-74 mission is scheduled to last approximately eight days. Docking with Mir will occur on the fourth day of the flight. An on-time launch and nominal mission duration would have Atlantis and her crew returning to Earth on Nov. 19 with a landing at Kennedy Space Center's Shuttle Landing Facility, Florida, at approximately 1:28 p.m. EST (1828 UTC).

The STS-74 mission will be the 15th mission for Atlantis and the 73rd for the Space Shuttle system.

STS-74 data at a glance:

VEHICLE: Atlantis/OV-104
LOCATION: Pad 39A
TARGET LAUNCH DATE/TIME: Nov. 11 at about 7:56 AM EST (1256 UTC)

LAUNCH WINDOW: 6 minutes, 57 seconds
TARGET MIR DOCKING DATE: Nov. 14
TARGET KSC LANDING DATE/TIME: Nov. 19 at about 1 PM EST (1800 UTC)
MISSION DURATION: 8 days, 5 hours, 4 minutes
CREW SIZE: 5 (All licensed Amateur Radio Operators)
ORBITAL ALTITUDE and INCLINATION: 196-245 statute miles/51.6 degrees

* MIR NEWS *
==========
Mir status as of 30-Oct-95

The current Mir crew is busy getting used to their new environment. Packet activity on 2-meters was temporarily interrupted due to a problem with the audio feed into the PacCom TNC. This problem has been resolved and 2-Meter packet is now fully operational. Some fine tuning of the TNC's parameters are still taking place to optimize 1200 baud data throughput.

The "USERS" counter has been set to 7. This means that 7 people can connect to Mir's keyboard at the same time. However if no one is at the keyboard on Mir, then all of the data sent goes into the bit bucket. It is recommended to stay OFF the keyboard ports unless someone from Mir is actually typing on the keyboard (Port call sign R0MIR). Excessive traffic on the keyboard port just causes interference to the user of the BBS (Port call sign R0MIR-1). Do not expect anyone to be at the keyboard after 21:00

UTC. This is one of the many parameters being adjusted.

The status of the 440 FM packet/voice is beginning to look better. The new dual band transceiver (Kenwood TM733 European version) is now on Mir. Arrangements are being made to deliver the missing Amateur Radio related parts to Mir in the near future (coax cables, manuals, cavity filter, etc). The cavity filters are required to allow simultaneous operation on both 2-meters (Icom 228) and on 70-cm (Kenwood TM733). Sources indicate the externally mounted dual band antenna was installed 6 months ago.

The Mir crew has two new Russian made 1200 baud TNCs. The TNCs are controlled by a Russian made Terminal Software program. Thomas has indicated that he has not be able to get the new TNCs to "initialize". There are people in Germany and Russia working on this problem.

The Mir station is still running on 145.550 MHz simplex for voice and packet communications. There may be a frequency change in the future, but there is no confirmed date for the frequency change.

During the weekend of 28-Nov-95, Sergi was active on voice and keyboard. Thomas was very active on voice working with key stations in the USA, fine tuning Amateur Radio related activities. Down link signal quality is very good, and the old noisy ventilation fan has been replaced (Do you remember the loud fan noises heard last summer everytime Mir used voice?).

The Mir crew sleeps from approximately 21:00 UTC till approximately 05:00 UTC (5pm-1am EST). Most of the Mir passes over the USA are during the sleeping period of the crew. The Mir Space station will be visible in the evening sky for the next few weeks. Please update your tracking programs, and look for Mir passes 30 - 120 minutes after local sunset.

Remember, only 1 station can connect to MIR's PMS (R0MIR-1) at a time, ALL others must wait. And please stay off the R0MIR keyboard port, unless it is active with communications from a Cosmonaut.

Where in sci.space.shuttle does it say ufo? This is not an appropriate forum for UFO discussions. sci.space.ufo, if it existed, would be, but since several other ufo newsgroups exist, I suggest taking the discussion there instead.

Hi Waldemar,

I had a packet-QSO with R0MIR on 145.550 MHz somewhere last june.
It took me a while to get through with my portable, but it can be done!
However, R0MIR isn't always on the air. They periodically shut down
their ham gear (to conserve power I guess).

From: yingst@knighted.com (Harry Yingst)
Subject: Mods for Icom IC-736

Does anyone have any mods for the ICOM IC-736? I'm looking for a way to
turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna). I'm also looking for a way to
improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).
I had a IC-737 that had the same problem with the audio,
just not sounding quite right. I am also interested in any other mods
for the Icom IC-736. Please send any replies to yingst@knighted.com Note:
If you post a reply into this newsgroup I proably wont get it,
my internet provider only holds news for 1 day. Thank You. Harry

>Thanks for your comments.
>Robert KO6PL

The TS-790A has several *glaring* faults, but the worst one for satellite use is that you can't use the narrow filters in the subband receiver. That's the receiver you *use* when listening to the satellite because you're transmitting on the main band unit. Major oops! Also, to make it track tune in sat mode, you have to *hold the SAT button in*, major oops. And the thermal design really sucks, the 70cm output module gets *very* hot under normal use. The main unit receiver is pretty good, but *you don't use it* for satellite.

The FT-736R is a bit long in the tooth, and can't do independent dual band receive, but for satellite use it is still the champ. It works the way you *need* it to work.

Gary

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on
schedule today for liftoff on Saturday, November 11. The
seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov

Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

published every week and is made available for unlimited free distribution.

* STS-74 NEWS *
===============
NASA managers have set Nov. 11, 1995, as the official launch date for the
STS-74 mission -- the second in a series of missions between the U.S. Space
Shuttle and the Russian Space Station Mir. The primary purpose of the Space
Shuttle Atlantis STS-74 mission is the installation of a docking module that
will improve clearance between the Shuttle and Mir's solar arrays during
subsequent dockings. Atlantis' crew also will return to Earth experiment
samples, equipment for repair and analysis and products manufactured on the
station.

The Nov. 11 launch of Atlantis is planned for approximately 7:56 AM EST
(1256 UTC) from Kennedy Space Center's Launch Complex 39-A. The actual
launch time may vary by a few minutes based on calculations of Mir's precise
location in space at the time of liftoff. The available launch period, or

RE: The Learning Machine Takes You Beyond Virtual Reality
http://Zygon.com

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

Fred Sterling

Date: 8 Nov 1995 21:32:00 GMT
From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

From: rbickel@ccnet.com (Robert Bickel)
Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

>Robert KO6PL

Just to put things in perspective, I have a FT-736R, but do not own or have
not played much with a TS-790A. So if anyone knows more about the TS-790A,
It wont hurt my feelings if someone contradicts me in regards to the
TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted
LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high
end VHF/UHF radios. The FT-736R came out before anyone else had anything
similar. This fact in it's self accounts for why there are some many more
of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on
schedule today for liftoff on Saturday, November 11. The
seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle
Amateur Radio EXperiment (SAREX). The project has flown on 19
previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously
used ham radio from Atlantis during STS-37 in April 1991 and from
the Shuttle Discovery during STS-56 in April 1993. This will be the
third mission Ken has flown where the entire crew are licensed radio
amateurs. The other members include Mission Specialist Jerry Ross,
N5SCW, who was also member of STS-37 SAREX crew, and operated ham
radio aboard the STS-55 Columbia mission in April/May 1993; and
Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard
the Shuttle Columbia during STS-58 in October/November 1993. Two of
the crew members have just recently earned Amateur Radio licenses.
They are NASA astronaut James Halsell, KC5RNI and Canadian Space
Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the
shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts
with 5 schools from around the US. SAREX general voice contacts are
expected to commence after a rendezvous and docking with the Russian

Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA SAREX WWW Home Page:
http://www.nasa.gov/sarex/sarexmainpage.html

World Wide Web: http://www.amsat.org
Johnson Space Center Amateur Radio Club
BBS: (713) 244-5625
Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking

missions.

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l

earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

The best source for such material is AMSAT's ftp file server:

ftp://ftp.amsat.org

which is also pointed to by AMSAT's WWW site

http://www.amsat.org

Just to put things in perspective, I have a FT-736R, but do not own or have
not played much with a TS-790A. So if anyone knows more about the TS-790A,
It wont hurt my feelings if someone contradicts me in regards to the
TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

Does anyone know if there is a way to get these guys to edit their newsgroup header so that the responses to the SPAMED post don't end up here and in sci.space.shuttle instead of just in alt.paranet.ufo? Can an administrator somewhere filter out this junk?

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and rec.readio.amateur.space are all in the message header. Best approach is to send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then against the issue. Be bold, be brave and make radical statements. Just make sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO dweebs will respond in alt.ufo.abducted to your message containing not address back to the R.R.A.S. newsgroup.

We can try that next.

Subject: Epoch Time ?

Please, I need to know what is the meaning of the numbers that are in the
epoch time in the kep data in the Amsat format.
I need to introduce this elements in quicktrack 4.0, but the format is not the
same.
Does anyone know a good free software (for windows), for tracking and
communications.
Thanks

Get a Newsreader program with a "Kill" file and or learn how to use the one you already have to kill threads that you find offensive then you will not have to play censor for the rest of us.

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on schedule today for liftoff on Saturday, November 11. The seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing

is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a

greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov

Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

: Ham operator Jokes:

Hi Burt! I really miss your *perspective* on amateur radio over there on
the RIME network.

: 1. What is the thinnest book in the world?
: What hams know about women.

I heard "Italian War Heroes" myself.

: 2. How does a ham take a bubble bath?
: He eats beans for dinner.

Yeah, I heard "How does a redneck take a......"

: 3. What's a ham's idea of foreplay?
: A half hour of contesting.

I heard "Brace yourself Martha"

: 4. How can you tell if a ham is sexually excited?
: If he's still breathing.

This one is very old......

: 5. How many hams does it take to change a roll of toilet paper?
: We don't know...it has never happened.

The version I head was "Men" and not just hams.

: 6. What's a ham's idea of helping with the housework?
: Lifting his leg so you can vacuum.

Once again, I had heard "men"

: 7. What does a ham consider a seven course meal?
: A hot dog and a six pack of beer.

Once again, I had heard "men".

Burt, you're gonna have to do a little better than this!

Cheers!

Andy

Hi fellow hams:

Still looking for info on Sinadder Model #S-101. Also willing to trade a goodie from the qrp junque box for good data. OR willing to pay costs for repro's.

Tnx,

John, N5INZ

2353. Re: THE Burt

> Frequently I hear hams say, THE name HERE is_____.
>How often do you say when you meet someone (assuming your name
>is Charlie), THE name HERE is Charlie? You never do that right? After
>to do so is so impersonal and asinine that you would not want
>to seem like a fool-then why do it on the air? Just because you
>are a ham is no excuse not to be personal. Of course you could
>really sound like THE jerk of the year by saying, THE first
>personal here is Charlie (at least if you are not personal-you are
>using the word-albeit it in an extremely impersonal way).
>Also why say "here", is your name any different when you are "there?"
>
>73 from we here (not there) at K1OIK where THE name are Burt.
>---------------------------------46492684123405--

Burt:

Did it ever occour to you that meeting someone in person is differnt
than meeting them on the air? In my 15 brief years as a ham and SWL I
have never heard a conversation, amateur or commercial that resembled
one I would have with someone face to face.

I dont remember ever telling anyone I was talking to face to face that
their voice was just above the noise level.

Furthermore I dont expect my radio contact to use perfect grammar or
say and do the things I do in order to enjoy communicating with him.

By the way Burt, whats this got to do with building and experimenting
this is rec.radio.amateur.homebrew isnt it?

Regards,

Tim Hynde ka8ddz

Radio Meteor Observation Bulletin No. 27 Nov 1995

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Thomas Ashcraft
Location: Santa Fe, New Mexico, USA (35 42' N, 105 57' W)
Frequencies: 89.5 MHz, 91.1 MHz, 91.9 MHz, 94.7 MHz, 98.1 MHz, 99.1 MHz
Transmitters: Multiple transmitters received.
Receivers: Sangean ATS-803A, Technics SA-160, Sony HP-160,
Hallicrafters SX-62B.
Antennas: Using four separate six element directional FM Yagi's
Ant. Elev: Experimenting with different elevations
Obs. method: Strip charting full time for fireballs and anomalous meteor
activity. Listening and counting in real time or during audio
tape playback. I make a second by second count and also note
duration of each reflection and any significant qualities.
WWV universal time is also recorded on the audio tapes.

October 1995

. In October I recorded the Orionids to stereo VHS tape and have all hours
recorded when the shower radiant was above my local horizon from October
18 to October 24. There are over 130 hours of audio tape including baseline
sporadic counts and I will keep these tapes until I can process them
properly. If there is a meteor scientist interested in plotting these tapes,
they may be available. Please feel free to e-mail me (address see below).

Thomas Ashcraft

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
Siedlce Poland, 66.41 MHz, 25 kW
Pardubice Czech Rep 66.44 MHz, 30 kW
Hradec Kralove Czech Rep 66.44 MHz, 30 kW
Sibiu Romania 66.44 MHz, 40 kW
Poznan Poland 66.56 MHz, 38 kW
Baia Mare Romania 66.56 MHz, 35 kW
Budapest Hungary 66.62 MHz, 100 kW

Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East),
elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA, Bratislava

The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

October 1995

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Oct	UT										
1995	20h	21	22	23	00	01	02	03	04	05	06	07
1- 2	31	54	54	67	74	65	64	84	73	76	55	60

30-31	24	44	52	66	72	60	64	77	80	62	70	63
31-01	98	124	69	68	76	88	83	92	93	73	80	91
1995	20h	21	22	23	00	01	02	03	04	05	06	07

Oct | UT

Notes:

. Some transmitters are not broadcasting between 2h-5h local time
(Sat-Sun 3h-6h local time) or sometimes longer. (When winter hour is
in use: local time = UT + 1h).

. ? possibly sporadic-E, to be checked.

. good Orionid activity on Oct 17-18, and between Oct 21-25.
The Orionid radiant rises at 20h30m, and sets at 11h15m.
Best forward scatter conditions for this setup between 5h and 7h UT.

Maurice De Meyere / Chris Steyaert

Observer: Werfried Kuneth
Location: Villach, Austria (46 37' N, 13 53' E)
Frequency: 59.250 MHz, SSB mode
Transmitter location: 150 kW TV video carrier from Bucaresti, distance
950 km, east. Sometimes other TV video carriers are selected.
Antenna: dipole with reflector, direction east.
Receiver: AOR AR-8000. No modifications, 6dB attenuator at input.
Observing method: the audio signal is fed into a real time FFT display
(FFTDSP program from AF9Y) on the PC where 640 channels of 2Hz width
are recorded and stored continuously. Every meteor reflection produces
a distinct whistle, which is recorded easily by the real time FFT
program.
From the saved .GIF files only reflections of at least 15 seconds are
taken for the relative count:

October 1995

Long meteor reflection counts in
one hour intervals starting at UT:

Day | 05h00 UT 06h00 UT
Oct.95 |
---
09 | 2 3
10 | 8 9
11 | - -
12 | 4 6
13 | 6 6
14 | 9 8
15 | 6 13 (with several long radio fireballs)
16 | 13 12
17 | 9 5
18 | 8 7
19 | 8 7
20 | 10 12
21 | 9 9

22 | 14 18 (with several long radio fireballs)
23 | 8 9
24 | 7 10
25 | 10 7
26 | 9 8
27 | 12 9
28 | 5 6
29 | 7 5
30 | >5 -
31 | 9 7

. for reference: a 15+ s duration count of 18 is about 40% of the 1995 radio Perseids peak.

. At 05h00 to 07h00 UT the calculated OF (observability function) is highest, I did only count at the OF peak hours, just to see, if the Orionids peak comes in at the right date.

. Local time conversion: one hour ahead of UT (06h00 UT is 07h00 local).

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and has gradually been expanded.

Typically it contains: summaries of recent observations, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or unsubscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an
incredible new multi-media technology that uses a special digital headset that forces your
mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even
read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail.
Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and rec.readio.amateur.space are all in the message header. Best approach is to send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then against the issue. Be bold, be brave and make radical statements. Just make sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO dweebs will respond in alt.ufo.abducted to your message containing not address back to the R.R.A.S. newsgroup.

We can try that next.

Subject: Epoch Time ?

Please, I need to know what is the meaning of the numbers that are in the
epoch time in the kep data in the Amsat format.
I need to introduce this elements in quicktrack 4.0, but the format is not the
same.
Does anyone know a good free software (for windows), for tracking and
communications.
Thanks

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on schedule today for liftoff on Saturday, November 11. The seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people,

particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov

Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

FOR FURTHER INFORMATION:
Contact the American Radio Relay League

America Online HQARRL1

ARRL's (Newington, CT) Amateur Radio station (call sign W1AW) transmits news bulletins (9:45 PM, 12:45 AM EST) on HF bands at 1.855, 3.99, 7.29, 14.29, 18.16, 21.39, 28.59 and in the Connecticut area on VHF at 147.555 MHz. W1AW bulletins are also forwarded on packet.

Members of the Goddard Amateur Radio Club (Greenbelt, MD)
re-transmit live, shuttle air-to-ground audio over the amateur
frequencies from their club station, WA3NAN. To listen-in, tune to
Amateur Radio high frequency (HF) bands at 3.86, 7.185, 14.295,
21.395, and 28.65 megahertz (MHz) and in the Maryland/DC area on a
very high frequency (VHF) band at 147.45 MHz.

The ''SAREX Bulletin'' contains additional general information on
SAREX. This document may be obtained electronically from many of the
popular on-line electronic services.

=========

MONDAY NOVEMBER 6, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* STS-74 NEWS *
===============
NASA managers have set Nov. 11, 1995, as the official launch date for the
STS-74 mission -- the second in a series of missions between the U.S. Space
Shuttle and the Russian Space Station Mir. The primary purpose of the Space
Shuttle Atlantis STS-74 mission is the installation of a docking module that
will improve clearance between the Shuttle and Mir's solar arrays during
subsequent dockings. Atlantis' crew also will return to Earth experiment
samples, equipment for repair and analysis and products manufactured on the
station.

The Nov. 11 launch of Atlantis is planned for approximately 7:56 AM EST
(1256 UTC) from Kennedy Space Center's Launch Complex 39-A. The actual
launch time may vary by a few minutes based on calculations of Mir's precise
location in space at the time of liftoff. The available launch period, or
"window" to launch Atlantis, is approximately seven minutes each day.

The STS-74 mission is scheduled to last approximately eight days. Docking with Mir will occur on the fourth day of the flight. An on-time launch and nominal mission duration would have Atlantis and her crew returning to Earth on Nov. 19 with a landing at Kennedy Space Center's Shuttle Landing Facility, Florida, at approximately 1:28 p.m. EST (1828 UTC).

The STS-74 mission will be the 15th mission for Atlantis and the 73rd for the Space Shuttle system.

STS-74 data at a glance:

VEHICLE: Atlantis/OV-104
LOCATION: Pad 39A
TARGET LAUNCH DATE/TIME: Nov. 11 at about 7:56 AM EST (1256 UTC)
LAUNCH WINDOW: 6 minutes, 57 seconds
TARGET MIR DOCKING DATE: Nov. 14
TARGET KSC LANDING DATE/TIME: Nov. 19 at about 1 PM EST (1800 UTC)
MISSION DURATION: 8 days, 5 hours, 4 minutes
CREW SIZE: 5 (All licensed Amateur Radio Operators)
ORBITAL ALTITUDE and INCLINATION: 196-245 statute miles/51.6 degrees

[Info via FB1RCI]

* MIR NEWS *
==========
Mir status as of 30-Oct-95

The current Mir crew is busy getting used to their new environment. Packet activity on 2-meters was temporarily interrupted due to a problem with the audio feed into the PacCom TNC. This problem has been resolved and 2-Meter packet is now fully operational. Some fine tuning of the TNC's parameters are still taking place to optimize 1200 baud data throughput.

The "USERS" counter has been set to 7. This means that 7 people can connect to Mir's keyboard at the same time. However if no one is at the keyboard on Mir, then all of the data sent goes into the bit bucket. It is recommended to stay OFF the keyboard ports unless someone from Mir is actually typing on the keyboard (Port call sign R0MIR). Excessive traffic on the keyboard port just causes interference to the user of the BBS (Port call sign R0MIR-1). Do not expect anyone to be at the keyboard after 21:00 UTC. This is one of the many parameters being adjusted.

The status of the 440 FM packet/voice is beginning to look better. The new dual band transceiver (Kenwood TM733 European version) is now on Mir. Arrangements are being made to deliver the missing Amateur Radio related parts to Mir in the near future (coax cables, manuals, cavity filter, etc). The cavity filters are required to allow simultaneous operation on both 2-meters (Icom 228) and on 70-cm (Kenwood TM733). Sources indicate the externally mounted dual band antenna was installed 6 months ago.

The Mir crew has two new Russian made 1200 baud TNCs. The TNCs are controlled by a Russian made Terminal Software program. Thomas has indicated that he has not be able to get the new TNCs to "initialize". There are people in Germany and Russia working on this problem.

The Mir station is still running on 145.550 MHz simplex for voice and packet communications. There may be a frequency change in the future, but there is no confirmed date for the frequency change.

During the weekend of 28-Nov-95, Sergi was active on voice and keyboard. Thomas was very active on voice working with key stations in the USA, fine tuning Amateur Radio related activities. Down link signal quality is very good, and the old noisy ventilation fan has been replaced (Do you remember the loud fan noises heard last summer everytime Mir used voice?).

The Mir crew sleeps from approximately 21:00 UTC till approximately 05:00 UTC (5pm-1am EST). Most of the Mir passes over the USA are during the sleeping period of the crew. The Mir Space station will be visible in the evening sky for the next few weeks. Please update your tracking programs, and look for Mir passes 30 - 120 minutes after local sunset.

Remember, only 1 station can connect to MIR's PMS (R0MIR-1) at a time, ALL others must wait. And please stay off the R0MIR keyboard port, unless it is active with communications from a Cosmonaut.

Where in sci.space.shuttle does it say ufo? This is not an appropriate
forum for UFO discussions. sci.space.ufo, if it existed, would be, but
since several other ufo newsgroups exist, I suggest taking the
discussion there instead.

Subject: PLEASE IGNORE REQUEST TO REMOVE REC.RADIO.AMATEUR.SPACE OUT OF THE UFO LOOP.

Do these UFO's have ham radio stations on them?
I have MIR confirmed , but that's about it.

ARLS022 Next shuttle all licensed

Space Shuttle mission STS-74 is scheduled for lift-off at 1255 UTC
on Saturday, November 11, with all five crew members holding Amateur
Radio licenses.

NASA astronaut James Halsell, KC5RNI, and Canadian Space Agency
astronaut Chris Hadfield, KC5RNJ, both received their licenses in
recent days, and both plan to participate in Shuttle Amateur Radio
EXperiment (SAREX) activities during the STS-74 mission.

Halsell is the shuttle's pilot, and Hadfield is a mission
specialist.

Shuttle Atlantis's commander for STS-74 is Ken Cameron, KB5AWP, who
used Amateur Radio from Atlantis during STS-37 in April 1991 and
from Discovery during STS-56 in April 1993. This will be the third
mission Cameron has flown where the entire crew are licensed radio
amateurs.

Other STS-74 crew members are Mission Specialist Jerry Ross, N5SCW,
who was also a member of STS-37, and who operated ham radio aboard
the STS-55 Columbia mission in April/May 1993; and Mission
Specialist Bill McArthur, KC5ACR, who used ham radio aboard Columbia

during STS-58 in October/November 1993.

For more information on the SAREX program, visit the SAREX home page
on the World Wide Web at

http://www.nasa.gov/sarex/sarexmainpage.html

2359. Request for help w/portable satcom

Newsgroup: rec.radio.amateur.space
Date: 1995-11-12 00:00:00 UTC
From: csp@clark.net
Message-ID: <485bgh$qu@clarknet.clark.net>
Source record: 23764

I am planning a hiking and backpacking trip and would like to try portable packet ops via satellite. I am familiar with packet but have never done any sat work. Is it feasbile to do satellite packet in the field with a handheld and "portable" antenna? Any suggestions/advice would be much appreciated. Thanks.

Craig Peterson, N3DCT

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the
algorithms in the book - there are several timescales, described
elsewhere in the same book.

Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

The best source for such material is AMSAT's ftp file server:

ftp://ftp.amsat.org

which is also pointed to by AMSAT's WWW site

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

From: Luis Miguel Nunes <lm@demnet2.ubi.pt>
Subject: Epoch Time ?

Please, I need to know what is the meaning of the numbers that are in the
epoch time in the kep data in the Amsat format.
I need to introduce this elements in quicktrack 4.0, but the format is not the
same.
Does anyone know a good free software (for windows), for tracking and
communications.
Thanks

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on
schedule today for liftoff on Saturday, November 11. The

seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW

William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time, and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov

Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

MONDAY NOVEMBER 6, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* STS-74 NEWS *
===============
NASA managers have set Nov. 11, 1995, as the official launch date for the STS-74 mission -- the second in a series of missions between the U.S. Space Shuttle and the Russian Space Station Mir. The primary purpose of the Space Shuttle Atlantis STS-74 mission is the installation of a docking module that will improve clearance between the Shuttle and Mir's solar arrays during subsequent dockings. Atlantis' crew also will return to Earth experiment samples, equipment for repair and analysis and products manufactured on the station.

The Nov. 11 launch of Atlantis is planned for approximately 7:56 AM EST (1256 UTC) from Kennedy Space Center's Launch Complex 39-A. The actual launch time may vary by a few minutes based on calculations of Mir's precise location in space at the time of liftoff. The available launch period, or "window" to launch Atlantis, is approximately seven minutes each day.

The STS-74 mission is scheduled to last approximately eight days. Docking with Mir will occur on the fourth day of the flight. An on-time launch and nominal mission duration would have Atlantis and her crew returning to Earth on Nov. 19 with a landing at Kennedy Space Center's Shuttle Landing Facility, Florida, at approximately 1:28 p.m. EST (1828 UTC).

The STS-74 mission will be the 15th mission for Atlantis and the 73rd for the Space Shuttle system.

STS-74 data at a glance:

VEHICLE: Atlantis/OV-104
LOCATION: Pad 39A
TARGET LAUNCH DATE/TIME: Nov. 11 at about 7:56 AM EST (1256 UTC)

LAUNCH WINDOW: 6 minutes, 57 seconds
TARGET MIR DOCKING DATE: Nov. 14
TARGET KSC LANDING DATE/TIME: Nov. 19 at about 1 PM EST (1800 UTC)
MISSION DURATION: 8 days, 5 hours, 4 minutes
CREW SIZE: 5 (All licensed Amateur Radio Operators)
ORBITAL ALTITUDE and INCLINATION: 196-245 statute miles/51.6 degrees

* MIR NEWS *
==========
Mir status as of 30-Oct-95

The current Mir crew is busy getting used to their new environment. Packet activity on 2-meters was temporarily interrupted due to a problem with the audio feed into the PacCom TNC. This problem has been resolved and 2-Meter packet is now fully operational. Some fine tuning of the TNC's parameters are still taking place to optimize 1200 baud data throughput.

The "USERS" counter has been set to 7. This means that 7 people can connect to Mir's keyboard at the same time. However if no one is at the keyboard on Mir, then all of the data sent goes into the bit bucket. It is recommended to stay OFF the keyboard ports unless someone from Mir is actually typing on the keyboard (Port call sign R0MIR). Excessive traffic on the keyboard port just causes interference to the user of the BBS (Port call sign R0MIR-1). Do not expect anyone to be at the keyboard after 21:00

UTC. This is one of the many parameters being adjusted.

The status of the 440 FM packet/voice is beginning to look better. The new dual band transceiver (Kenwood TM733 European version) is now on Mir. Arrangements are being made to deliver the missing Amateur Radio related parts to Mir in the near future (coax cables, manuals, cavity filter, etc). The cavity filters are required to allow simultaneous operation on both 2-meters (Icom 228) and on 70-cm (Kenwood TM733). Sources indicate the externally mounted dual band antenna was installed 6 months ago.

The Mir crew has two new Russian made 1200 baud TNCs. The TNCs are controlled by a Russian made Terminal Software program. Thomas has indicated that he has not be able to get the new TNCs to "initialize". There are people in Germany and Russia working on this problem.

The Mir station is still running on 145.550 MHz simplex for voice and packet communications. There may be a frequency change in the future, but there is no confirmed date for the frequency change.

During the weekend of 28-Nov-95, Sergi was active on voice and keyboard. Thomas was very active on voice working with key stations in the USA, fine tuning Amateur Radio related activities. Down link signal quality is very good, and the old noisy ventilation fan has been replaced (Do you remember the loud fan noises heard last summer everytime Mir used voice?).

The Mir crew sleeps from approximately 21:00 UTC till approximately 05:00 UTC (5pm-1am EST). Most of the Mir passes over the USA are during the sleeping period of the crew. The Mir Space station will be visible in the evening sky for the next few weeks. Please update your tracking programs, and look for Mir passes 30 - 120 minutes after local sunset.

Remember, only 1 station can connect to MIR's PMS (R0MIR-1) at a time, ALL others must wait. And please stay off the R0MIR keyboard port, unless it is active with communications from a Cosmonaut.

Where in sci.space.shuttle does it say ufo? This is not an appropriate forum for UFO discussions. sci.space.ufo, if it existed, would be, but since several other ufo newsgroups exist, I suggest taking the discussion there instead.

You mean in person you are supposed to sound like a person but on
the air sounding like an ass is OK? All my conversations are spoken
as much as they would be in person as possible.

Well, DAWG! Burt Fisher's jokes not funny?
Y'all must got rocks fer brains! Ah'z just finishin'
readin' some print outs of Burt's jokes while
relaxin' in the bath -- fartin' up a storm.
Makes like a freakin' hot tub.

Ye haw! Let's hear it for Burt's humor!

SB SPACE ARL ARLS022
ARLS022 Next shuttle all licensed

Space Shuttle mission STS-74 is scheduled for lift-off at 1255 UTC
on Saturday, November 11, with all five crew members holding Amateur
Radio licenses.

NASA astronaut James Halsell, KC5RNI, and Canadian Space Agency
astronaut Chris Hadfield, KC5RNJ, both received their licenses in
recent days, and both plan to participate in Shuttle Amateur Radio
EXperiment (SAREX) activities during the STS-74 mission.

Halsell is the shuttle's pilot, and Hadfield is a mission
specialist.

Shuttle Atlantis's commander for STS-74 is Ken Cameron, KB5AWP, who
used Amateur Radio from Atlantis during STS-37 in April 1991 and
from Discovery during STS-56 in April 1993. This will be the third
mission Cameron has flown where the entire crew are licensed radio
amateurs.

Other STS-74 crew members are Mission Specialist Jerry Ross, N5SCW,
who was also a member of STS-37, and who operated ham radio aboard
the STS-55 Columbia mission in April/May 1993; and Mission
Specialist Bill McArthur, KC5ACR, who used ham radio aboard Columbia
during STS-58 in October/November 1993.

For more information on the SAREX program, visit the SAREX home page
on the World Wide Web at

http://www.nasa.gov/sarex/sarexmainpage.html

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

The best source for such material is AMSAT's ftp file server:

ftp://ftp.amsat.org

which is also pointed to by AMSAT's WWW site

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

From: Luis Miguel Nunes <lm@demnet2.ubi.pt>
Subject: Epoch Time ?

Please, I need to know what is the meaning of the numbers that are in the
epoch time in the kep data in the Amsat format.
I need to introduce this elements in quicktrack 4.0, but the format is not the
same.
Does anyone know a good free software (for windows), for tracking and
communications.
Thanks

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on schedule today for liftoff on Saturday, November 11. The seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio

amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International

Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:
NASA Spacelink computer information system (look under Spacelink.Hot.Topics)
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov
World Wide Web: http://spacelink.msfc.nasa.gov
Internet TCP/IP address: 192.149.89.61
NASA Shuttle World Wide Web Home Page: http://shuttle.nasa.gov

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time,

and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1
Telnet, FTP, and Gopher: spacelink.msfc.nasa.gov

BBS: (713) 244-5625
Goddard Amateur Radio Club
BBS: (301) 286-4137
World Wide Web: http://garc.gsfc.nasa.gov/www/garc-home-

page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

MONDAY NOVEMBER 6, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* STS-74 NEWS *
===============
NASA managers have set Nov. 11, 1995, as the official launch date for the STS-74 mission -- the second in a series of missions between the U.S. Space Shuttle and the Russian Space Station Mir. The primary purpose of the Space Shuttle Atlantis STS-74 mission is the installation of a docking module that will improve clearance between the Shuttle and Mir's solar arrays during subsequent dockings. Atlantis' crew also will return to Earth experiment samples, equipment for repair and analysis and products manufactured on the station.

The Nov. 11 launch of Atlantis is planned for approximately 7:56 AM EST (1256 UTC) from Kennedy Space Center's Launch Complex 39-A. The actual launch time may vary by a few minutes based on calculations of Mir's precise location in space at the time of liftoff. The available launch period, or "window" to launch Atlantis, is approximately seven minutes each day.

The STS-74 mission is scheduled to last approximately eight days. Docking with Mir will occur on the fourth day of the flight. An on-time launch and nominal mission duration would have Atlantis and her crew returning to Earth on Nov. 19 with a landing at Kennedy Space Center's Shuttle Landing Facility, Florida, at approximately 1:28 p.m. EST (1828 UTC).

The STS-74 mission will be the 15th mission for Atlantis and the 73rd for the Space Shuttle system.

STS-74 data at a glance:

VEHICLE: Atlantis/OV-104
LOCATION: Pad 39A
TARGET LAUNCH DATE/TIME: Nov. 11 at about 7:56 AM EST (1256 UTC)
LAUNCH WINDOW: 6 minutes, 57 seconds
TARGET MIR DOCKING DATE: Nov. 14
TARGET KSC LANDING DATE/TIME: Nov. 19 at about 1 PM EST (1800 UTC)
MISSION DURATION: 8 days, 5 hours, 4 minutes
CREW SIZE: 5 (All licensed Amateur Radio Operators)
ORBITAL ALTITUDE and INCLINATION: 196-245 statute miles/51.6 degrees

* MIR NEWS *
==========
Mir status as of 30-Oct-95

The current Mir crew is busy getting used to their new environment. Packet activity on 2-meters was temporarily interrupted due to a problem with the audio feed into the PacCom TNC. This problem has been resolved and 2-Meter packet is now fully operational. Some fine tuning of the TNC's parameters are still taking place to optimize 1200 baud data throughput.

The "USERS" counter has been set to 7. This means that 7 people can connect to Mir's keyboard at the same time. However if no one is at the keyboard on Mir, then all of the data sent goes into the bit bucket. It is recommended to stay OFF the keyboard ports unless someone from Mir is actually typing on the keyboard (Port call sign R0MIR). Excessive traffic on the keyboard port just causes interference to the user of the BBS (Port call sign R0MIR-1). Do not expect anyone to be at the keyboard after 21:00 UTC. This is one of the many parameters being adjusted.

The status of the 440 FM packet/voice is beginning to look better. The new dual band transceiver (Kenwood TM733 European version) is now on Mir. Arrangements are being made to deliver the missing Amateur Radio related parts to Mir in the near future (coax cables, manuals, cavity filter, etc). The cavity filters are required to allow simultaneous operation on both 2-meters (Icom 228) and on 70-cm (Kenwood TM733). Sources indicate the externally mounted dual band antenna was installed 6 months ago.

The Mir crew has two new Russian made 1200 baud TNCs. The TNCs are controlled by a Russian made Terminal Software program. Thomas has indicated that he has not be able to get the new TNCs to "initialize". There are people in Germany and Russia working on this problem.

The Mir station is still running on 145.550 MHz simplex for voice and packet communications. There may be a frequency change in the future, but there is no confirmed date for the frequency change.

During the weekend of 28-Nov-95, Sergi was active on voice and keyboard. Thomas was very active on voice working with key stations in the USA, fine tuning Amateur Radio related activities. Down link signal quality is very good, and the old noisy ventilation fan has been replaced (Do you remember the loud fan noises heard last summer everytime Mir used voice?).

The Mir crew sleeps from approximately 21:00 UTC till approximately 05:00 UTC (5pm-1am EST). Most of the Mir passes over the USA are during the sleeping period of the crew. The Mir Space station will be visible in the evening sky for the next few weeks. Please update your tracking programs, and look for Mir passes 30 - 120 minutes after local sunset.

Remember, only 1 station can connect to MIR's PMS (R0MIR-1) at a time, ALL others must wait. And please stay off the R0MIR keyboard port, unless it is active with communications from a Cosmonaut.

Where in sci.space.shuttle does it say ufo? This is not an appropriate
forum for UFO discussions. sci.space.ufo, if it existed, would be, but
since several other ufo newsgroups exist, I suggest taking the
discussion there instead.

Hi Waldemar,

I had a packet-QSO with R0MIR on 145.550 MHz somewhere last june.
It took me a while to get through with my portable, but it can be done!
However, R0MIR isn't always on the air. They periodically shut down

their ham gear (to conserve power I guess).

Subject: Mods for Icom IC-736

Does anyone have any mods for the ICOM IC-736? I'm looking for a way to
turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna). I'm also looking for a way to
improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).
I had a IC-737 that had the same problem with the audio,
just not sounding quite right. I am also interested in any other mods
for the Icom IC-736. Please send any replies to yingst@knighted.com Note:
If you post a reply into this newsgroup I proably wont get it,
my internet provider only holds news for 1 day. Thank You. Harry

Subject: TS-790A vs.FT-736R

In article <47s5o9$m71@ccnet2.ccnet.com> rbickel@ccnet.com (Robert Bickel) writes:
>I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood
>TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm
>sure its got to be some feature thats just not quite right with the Kenwood.
>Thanks for your comments.
>Robert KO6PL

The TS-790A has several *glaring* faults, but the worst one for satellite
use is that you can't use the narrow filters in the subband receiver.
That's the receiver you *use* when listening to the satellite because
you're transmitting on the main band unit. Major oops! Also, to make
it track tune in sat mode, you have to *hold the SAT button in*, major
oops. And the thermal design really sucks, the 70cm output module gets
very hot under normal use. The main unit receiver is pretty good, but
you don't use it for satellite.

The FT-736R is a bit long in the tooth, and can't do independent
dual band receive, but for satellite use it is still the champ.

It works the way you *need* it to work.

Gary

Subject: Request for help w/portable satcom

I am planning a hiking and backpacking trip and would like to try
portable packet ops via satellite. I am familiar with packet but have
never done any sat work. Is it feasbile to do satellite packet in the
field with a handheld and "portable" antenna? Any suggestions/advice
would be much appreciated. Thanks.

>to be pessimistic about this.

We can't even say that. If you have an open mind, you may think
that the "I think therfore I am" quote is the best evidence we have of the
sence of self. But forget that, you see we have nothing to loose if we
beleave that we exist.

Another quote I remeber from Stephen Hawkins is:
"No matter what the probability is that we got here, we made it".
I can't remeber how he put it, but the meaning is there. Who he was
arguing against was creationists. Their argument is that look at how many
things could have gone wrong ! To start chemistry .. if ice didn't float
there would be no life ... (There are thousands of those). Then
astronomy ... if the earth wasn't this big, this far from the sun.
If the sun wasn't this big. Then we have history (for any historical
figure we are a virtual impossibility ie. think of the chance any one
sperm has :-)) And so on. All these lead to the current events being
practicaly impossible. So it may be that the probability that life
can occur anywere again is zero if we round it to to X number of
zeroes. (Think X being big enough to exclude all planets)

My conculsion from the above are ...
The probability that this happens again are impossible to work out.
We have no way of guessing because we can't even comprehend the luck we
had to make it this. So the argument of probability is mute. It's just
the last resort from those that want to beleave there is life elsewre . They
start backwards. Let's assume there is life elsewere. Now let's shape our
argument to prove it is so, and ignore directions that would prove it otherwise.

Another point from S. Hawkins quote would be, "we made it so far".
That only speaks of the past. There is no evidence everything will fail
in the next three seconds. One of the increadable impossibilities would
work agaist us, ie a chain reaction in water would make ice sink, carbon
molecules will brake down .. and so on.

>
>2. We know that chemical reactions happen elsewhere just as they do here.
>I mean, for instance, our sun does not operate on principles that are in

>any way unique. Nor are meteorological phenomena different here from
>what they are in other planets we know about. So that's more evidence that
>this solar system and planet are hardly going to end up being the unique
>one among trillions.

We only assume that the reason life exists are those chemical
reactions that occured on earth. What if we assume that the only reason life
exists are the exact conditions as well as the order of events. When the earth
cooled, what the temperature of the sun was and when. The creation
of the layers of atmosphere since the earth began (no ozone layer now no life,
if there was an ozone layer then no life). You cannot doubt the fact that
it's impossible to duplicate the exact situation to start with as well as
the exact order of events. Unless you go back to your infinite sample
theorem. That's not possible, and I don't think many scientists
beleave this. My excuse agaist that would be: Consider the big bang. Since
the BB, material is rushing outwards. Nothing is beond that boundary,
therfore there is a limit to the size of "everything". Making it big enough
is like the scientists looking for dark matter. They just assume it exists
and start making up theories to prove it does. (a more legit persuit, but
so far it cannot be proven). ("So far ..." does not mean "Eventualy will be
proven".

>
>3. We know that water exists elsewhere in the universe (e.g. in comets),
>so that important ingredient is not unique to Earth.

That means practicaly nothing. If 50% of the reason life exists
is water, it's like saying that you need 100 ingreadiants to make a "X",
if you ensure that 50 are there. You still don't have "X". This is proved by
above. Your evidence that there is water did not prove that there is life (ie.
comets). I'd say more fundamentaly that to have life you need matter. It's
existance proves nothing about lifes existance. Basicaly for now all we know is
that you need 100 ingreadiants AND the recipy. ie. Same argument as above
you need the whole history of earth in the order it occured as well as
earth. The margin of error that may exist is the only hope you have of other
life elsewere. Like I said, we don't know what that margin is. It can span
from zero for the non-beleavers to 1 for the beleavers. And they get their data
from the same pot. Don't forget, by stating that Water is the most important
element in life, you are assuming you know something you don't.

>
>4. And finally, to me this is a little bit like picking up a grain of
>sand on one beach, just one grain, and swearing that _this_ grain is
>fundamentally different from all other grains of sand in every beach
>on earth. Failing chemical analysis of even a single other grain, I
>suppose one might wonder if it were true. But most reasonable people
>would _speculate_ that bullshit, this grain is probably very similar to
>zillions of others.
>

If the exact molecule count as well as the order those molecules
are aranged is what matters ... good luck finding a second. Your above argument

simply does one thing. What you fear are the increadable number of variables involved in life on earth. So pshycologicaly what you do is choose an example that get's rid of those variables. That seems to be uniform with all others. You then present it as similar to the case earth-life. Not realy. But even though I doubt ther are any beaches with two grains of sand that are the same. I doubt there are two on earth. Consider the variables molecular count, order of composition, Identity of molecules, molecular isotopes. Consider that we are coming up with many new particles all the time. So who knows what "ingrediants" went into making the grain you picked up. Put it under a microscope and consider the chance there is anothe one like it. Now make an earth and fill it with sand. What is the chance there is another person somewere that has made the same bowl full of sand identicle down to the last grain.

Not if ice didn't flote in his universe ...

SB SPACE ARL ARLS022
ARLS022 Next shuttle all licensed

Space Shuttle mission STS-74 is scheduled for lift-off at 1255 UTC on Saturday, November 11, with all five crew members holding Amateur Radio licenses.

NASA astronaut James Halsell, KC5RNI, and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ, both received their licenses in recent days, and both plan to participate in Shuttle Amateur Radio EXperiment (SAREX) activities during the STS-74 mission.

Halsell is the shuttle's pilot, and Hadfield is a mission specialist.

Shuttle Atlantis's commander for STS-74 is Ken Cameron, KB5AWP, who used Amateur Radio from Atlantis during STS-37 in April 1991 and from Discovery during STS-56 in April 1993. This will be the third mission Cameron has flown where the entire crew are licensed radio amateurs.

Other STS-74 crew members are Mission Specialist Jerry Ross, N5SCW, who was also a member of STS-37, and who operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR, who used ham radio aboard Columbia during STS-58 in October/November 1993.

For more information on the SAREX program, visit the SAREX home page on the World Wide Web at

http://www.nasa.gov/sarex/sarexmainpage.html

RE: The Learning Machine Takes You Beyond Virtual Reality
http://Zygon.com

Amazing!! If you have a moment check out a new web site http://Zygon.com. They have an incredible new multi-media technology that uses a special digital headset that forces your mind to learn. It blew my mind!!! Kinda felt like I was dreaming, while l
earning foreign languages, and programming my subconscious for success. And you can even read books with your eyes closed. Pretty awesome. The company offers a free 30 day trail. Check it out!!!

From: Carl Gregory <cgregory@uiuc.edu>
Subject: Moon track software

Look in the "Astronomical Almanac for the Year 19xx", published by the US Government Printing Office, and available in larger public libraries or in the Physics or Astronomy section of academic libraries. Section D gives tables of lunar positions, but also has a couple of pages (D46 in the 1994 edition) describing a simple algorithm for right ascension and declination. These can easily be converted to Az/El by the usual procedures. Most tabulated positions make use of an (additional) atmospheric refraction correction, which may not be correct for radio signals (EME).

The trickiest part is getting the time in the proper units for the algorithms in the book - there are several timescales, described elsewhere in the same book.

From: rbickel@ccnet.com (Robert Bickel)
Subject: TS-790A vs.FT-736R

I think I've noticed that most Oscar operators use the Yaesu FT-736R with the Kenwood TS-790A being almost universally rejected as a satellite rig.Can anyone explain why?.I'm sure its got to be some feature thats just not quite right with the Kenwood.
Thanks for your comments.

Just to put things in perspective, I have a FT-736R, but do not own or have not played much with a TS-790A. So if anyone knows more about the TS-790A, It wont hurt my feelings if someone contradicts me in regards to the TS-790A.

These are the facts as I know them:

The FT-736R is suppose to be quieter and more sensitive than the TS-790A.

The FT-736R is set up out of the box to supply power to your mast mounted LNA.

In my opinion, Yaesu seams to lead the competition when it comes to the high end VHF/UHF radios. The FT-736R came out before anyone else had anything similar. This fact in it's self accounts for why there are some many more of the FT-736R's around.

From: ghansen@accessone.com (Glenn Hansen)
Subject: WHAT CAN BE DONE ABOUT ALL THE UFO POSTING ON THIS NEWSGROUP?

It happens because the UFO freaks omong other space groups and
rec.readio.amateur.space are all in the message header. Best approach is to
send them a message explaining that they should change the header.
I tried this on a few of them the other day. If a few people change the header
during their response/followup it will be gone.

The other approach is to jump into the conversation twice. Once for and then
against the issue. Be bold, be brave and make radical statements. Just make
sure you delete R.R.A.S. out of the newsgroup list when you post. All the UFO
dweebs will respond in alt.ufo.abducted to your message containing not address
back to the R.R.A.S. newsgroup.

We can try that next.

Get a Newsreader program with a "Kill" file and or learn how to use the one you already have to kill threads that you find offensive then you will not have to play censor for the rest of us.

SB SPACE ARL ARLS021
ARLS021 Shuttle Countdown Continues

The countdown for launch of the Space Shuttle Atlantis continues on schedule today for liftoff on Saturday, November 11. The seven-minute launch window opens at about 1256 UTC.

The mission includes Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). The project has flown on 19 previous shuttle flights since 1983.

The mission will be Commanded by Ken Cameron, KB5AWP, who previously used ham radio from Atlantis during STS-37 in April 1991 and from the Shuttle Discovery during STS-56 in April 1993. This will be the third mission Ken has flown where the entire crew are licensed radio

amateurs. The other members include Mission Specialist Jerry Ross, N5SCW, who was also member of STS-37 SAREX crew, and operated ham radio aboard the STS-55 Columbia mission in April/May 1993; and Mission Specialist Bill McArthur, KC5ACR who used ham radio aboard the Shuttle Columbia during STS-58 in October/November 1993. Two of the crew members have just recently earned Amateur Radio licenses. They are NASA astronaut James Halsell, KC5RNI and Canadian Space Agency astronaut Chris Hadfield, KC5RNJ. Halsell will serve as the shuttle's Pilot, and Hadfield is a Mission Specialist.

During the flight, the shuttle astronauts have scheduled contacts with 5 schools from around the US. SAREX general voice contacts are expected to commence after a rendezvous and docking with the Russian Mir Space Station has occurred on November 14. There will not be any packet radio activity for this mission.

The shuttle is scheduled to land at the Kennedy Space Center in Florida at about 1828 UTC on November 19.

WHEN: Launch is scheduled for November 11, 1995 at 1256 UTC (7:56 AM EST) from the Kennedy Space Center, Cape Canaveral, Florida. Landing is scheduled for November 19, 1995 at 1828 UTC (1:28 PM EST) at the Kennedy Space Center, Florida. 8 day, 5 hour mission.

WHERE: The launch will place the shuttle into Earth orbit at an altitude of 196-245 statute miles (315-394 km) and an inclination of 51.6 degrees.

WHY: NASA's intent in making astronauts available for SAREX operations is to involve the largest possible numbers of people, particularly students, in technology and the US space program with the help of Amateur Radio.

During SAREX missions, the astronauts will typically make the following types of Amateur Radio contacts:
Scheduled radio contacts with schools.
Random radio contacts with the Amateur Radio community.
Personal contacts with the astronauts' families.

CREW MEMBERS (and Amateur Radio call signs):
Kenneth D. Cameron, Commander, KB5AWP
James Donald Halsell, Jr., Pilot, KC5RNI
Jerry L. Ross, Mission Specialist 1, N5SCW
William Surles McArthur, Jr., Mission Specialist 2, KC5ACR
Chris Hadfield, Mission Specialist 3, KC5RNJ

PAYLOAD: Primary Payload--Docking Module
The Space Shuttle Atlantis makes its second trip to the Russian Space Station Mir during this mission, this time to install a permanent docking module that will simplify future shuttle link ups to the Russian complex. The target Mir docking date is November 14. STS-74 is the second of seven shuttle flights to Mir. This effort, known as Phase 1, is the precursor to building the International

Space Station. This information taken from the NASA STS-74 Mission Summary, 12/14/94.

Additional STS-74 mission information can be obtained from NASA:

SAREX SPONSORS: The Shuttle Amateur Radio EXperiment (SAREX) is sponsored by the American Radio Relay League (ARRL), The Radio Amateur Satellite Corporation (AMSAT) and The National Aeronautics and Space Administration (NASA). SAREX is supported by the Federal Communications Commission (FCC).

PARTICIPATING SCHOOLS: A handful of schools are selected from around the world to make contact with the shuttle during most SAREX missions. These contacts are prearranged, giving the schools a greater chance at making a successful contact. Two or more students at each of the selected schools ask questions of the astronauts during the contact. The nature of these contacts embodies the primary goal of SAREX--to excite students' interest in learning.

The following schools have been selected by the SAREX Working Group for a scheduled radio contact during this mission:

Franklin Junior High School
Pocatello, ID

Connecticut-area schools (combined-effort)
Bedford Middle School (contact site), Westport
Coleytown Middle School, Westport
Western Middle School, Greenwich
Saxe Middle School, New Canaan
Columbus Magnet School, Norwalk

Lake Street Elementary School
Crown Point, IN

Round Lake area schools
Magee Middle School (contact site)
Round Lake Hts., IL

Quimby Oak Junior High School
San Jose, CA

ADDITIONAL INFORMATION FOR AMATEUR RADIO OPERATORS-

SAREX RADIO FREQUENCIES: During most SAREX missions, many of the crew members will make random contacts with earth-bound hams. They make these contacts during their breaks, before and after meal time,

and during their pre-sleep time. In fact, over the past years the astronauts have contacted thousands of amateurs around the world.

Since this flight is a shuttle-Mir docking mission, and SAREX and Mir Amateur Radio stations usually share the same downlink frequency (145.55 MHz), the SAREX Working Group has decided to use the following frequencies during this mission.

The crew will use separate receive and transmit frequencies. PLEASE do not transmit on the shuttle's DOWNLINK frequency. The DOWNLINK is your receiving frequency. The UPLINK is your transmitting frequency.

FM Voice Downlink: 145.84 MHz
FM Voice Uplink: 144.45, 144.47 MHz

The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air.

CALL SIGNS:
FM voice call signs--KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ

QSL VIA: Send reports and QSLs to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

SHUTTLE TRACKING: Current Keplerian elements to track the shuttle are available from the following sources:
NASA Spacelink computer information system
BBS: (205) 895-0028 VT-100, 8-N-1

page.html
Packet: WA3NAN on 145.090 MHz in DC area

CONFIGURATION: During STS-74, the SAREX hardware will be flown in configuration M. Configuration M uses the shuttle/Mir VHF radio for FM voice radio contacts.

During final approaches to the Mir Space Station, a VHF radio is used by the shuttle Commander to radio the Mir crew by ship-to-ship communications, providing shuttle status and keeping them informed of major events from that point on, including confirmation of contact, capture and conclusion of damping. This same VHF radio is used by the crew for SAREX activities during shuttle/Mir docking missions.

ARRL's (Newington, CT) Amateur Radio station (call sign W1AW) transmits news bulletins (9:45 PM, 12:45 AM EST) on HF bands at 1.855, 3.99, 7.29, 14.29, 18.16, 21.39, 28.59 and in the Connecticut area on VHF at 147.555 MHz. W1AW bulletins are also forwarded on packet.

Members of the Goddard Amateur Radio Club (Greenbelt, MD) re-transmit live, shuttle air-to-ground audio over the amateur frequencies from their club station, WA3NAN. To listen-in, tune to Amateur Radio high frequency (HF) bands at 3.86, 7.185, 14.295, 21.395, and 28.65 megahertz (MHz) and in the Maryland/DC area on a very high frequency (VHF) band at 147.45 MHz.

The ''SAREX Bulletin'' contains additional general information on SAREX. This document may be obtained electronically from many of the popular on-line electronic services.

Just a correction to WinOrbit's help file: TSE's web site is now
http://www.tele-satellit.com/tse/

You may also get the package from
ftp://ftp.tele-satellit.com/pub/tse/tse032.zip

WinOrbit together with TSE is really great! Give it a try!

MONDAY NOVEMBER 6, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* STS-74 NEWS *
===============
NASA managers have set Nov. 11, 1995, as the official launch date for the STS-74 mission -- the second in a series of missions between the U.S. Space Shuttle and the Russian Space Station Mir. The primary purpose of the Space Shuttle Atlantis STS-74 mission is the installation of a docking module that will improve clearance between the Shuttle and Mir's solar arrays during subsequent dockings. Atlantis' crew also will return to Earth experiment samples, equipment for repair and analysis and products manufactured on the station.

The Nov. 11 launch of Atlantis is planned for approximately 7:56 AM EST (1256 UTC) from Kennedy Space Center's Launch Complex 39-A. The actual launch time may vary by a few minutes based on calculations of Mir's precise location in space at the time of liftoff. The available launch period, or "window" to launch Atlantis, is approximately seven minutes each day.

The STS-74 mission is scheduled to last approximately eight days. Docking with Mir will occur on the fourth day of the flight. An on-time launch and nominal mission duration would have Atlantis and her crew returning to Earth on Nov. 19 with a landing at Kennedy Space Center's Shuttle Landing Facility, Florida, at approximately 1:28 p.m. EST (1828 UTC).

The STS-74 mission will be the 15th mission for Atlantis and the 73rd for the Space Shuttle system.

STS-74 data at a glance:

VEHICLE: Atlantis/OV-104
LOCATION: Pad 39A
TARGET LAUNCH DATE/TIME: Nov. 11 at about 7:56 AM EST (1256 UTC)
LAUNCH WINDOW: 6 minutes, 57 seconds
TARGET MIR DOCKING DATE: Nov. 14
TARGET KSC LANDING DATE/TIME: Nov. 19 at about 1 PM EST (1800 UTC)
MISSION DURATION: 8 days, 5 hours, 4 minutes
CREW SIZE: 5 (All licensed Amateur Radio Operators)
ORBITAL ALTITUDE and INCLINATION: 196-245 statute miles/51.6 degrees

* MIR NEWS *
==========
Mir status as of 30-Oct-95

The current Mir crew is busy getting used to their new environment. Packet activity on 2-meters was temporarily interrupted due to a problem with the audio feed into the PacCom TNC. This problem has been resolved and 2-Meter packet is now fully operational. Some fine tuning of the TNC's parameters are still taking place to optimize 1200 baud data throughput.

The "USERS" counter has been set to 7. This means that 7 people can connect to Mir's keyboard at the same time. However if no one is at the keyboard on Mir, then all of the data sent goes into the bit bucket. It is recommended to stay OFF the keyboard ports unless someone from Mir is actually typing on the keyboard (Port call sign R0MIR). Excessive traffic on the keyboard port just causes interference to the user of the BBS (Port call sign R0MIR-1). Do not expect anyone to be at the keyboard after 21:00 UTC. This is one of the many parameters being adjusted.

The status of the 440 FM packet/voice is beginning to look better. The new dual band transceiver (Kenwood TM733 European version) is now on Mir. Arrangements are being made to deliver the missing Amateur Radio related parts to Mir in the near future (coax cables, manuals, cavity filter, etc). The cavity filters are required to allow simultaneous operation on both 2-meters (Icom 228) and on 70-cm (Kenwood TM733). Sources indicate the externally mounted dual band antenna was installed 6 months ago.

The Mir crew has two new Russian made 1200 baud TNCs. The TNCs are controlled by a Russian made Terminal Software program. Thomas has indicated that he has not be able to get the new TNCs to "initialize". There are people in Germany and Russia working on this problem.

The Mir station is still running on 145.550 MHz simplex for voice and packet communications. There may be a frequency change in the future, but there is no confirmed date for the frequency change.

During the weekend of 28-Nov-95, Sergi was active on voice and keyboard. Thomas was very active on voice working with key stations in the USA, fine tuning Amateur Radio related activities. Down link signal quality is very good, and the old noisy ventilation fan has been replaced (Do you remember the loud fan noises heard last summer everytime Mir used voice?).

The Mir crew sleeps from approximately 21:00 UTC till approximately 05:00 UTC (5pm-1am EST). Most of the Mir passes over the USA are during the sleeping period of the crew. The Mir Space station will be visible in the evening sky for the next few weeks. Please update your tracking programs, and look for Mir passes 30 - 120 minutes after local sunset.

Remember, only 1 station can connect to MIR's PMS (R0MIR-1) at a time, ALL others must wait. And please stay off the R0MIR keyboard port, unless it is active with communications from a Cosmonaut.

Where in sci.space.shuttle does it say ufo? This is not an appropriate
forum for UFO discussions. sci.space.ufo, if it existed, would be, but
since several other ufo newsgroups exist, I suggest taking the
discussion there instead.

>73 de Waldemar, DK3VN

Hi Waldemar,

I had a packet-QSO with R0MIR on 145.550 MHz somewhere last june.
It took me a while to get through with my portable, but it can be done!
However, R0MIR isn't always on the air. They periodically shut down

their ham gear (to conserve power I guess).

From: yingst@knighted.com (Harry Yingst)
Subject: Mods for Icom IC-736

Does anyone have any mods for the ICOM IC-736? I'm looking for a way to
turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna). I'm also looking for a way to
improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).
I had a IC-737 that had the same problem with the audio,
just not sounding quite right. I am also interested in any other mods
for the Icom IC-736. Please send any replies to yingst@knighted.com Note:
If you post a reply into this newsgroup I proably wont get it,
my internet provider only holds news for 1 day. Thank You. Harry

>sure its got to be some feature thats just not quite right with the Kenwood.
>Thanks for your comments.
>Robert KO6PL

The TS-790A has several *glaring* faults, but the worst one for satellite
use is that you can't use the narrow filters in the subband receiver.
That's the receiver you *use* when listening to the satellite because
you're transmitting on the main band unit. Major oops! Also, to make
it track tune in sat mode, you have to *hold the SAT button in*, major
oops. And the thermal design really sucks, the 70cm output module gets
very hot under normal use. The main unit receiver is pretty good, but
you don't use it for satellite.

The FT-736R is a bit long in the tooth, and can't do independent
dual band receive, but for satellite use it is still the champ.

It works the way you *need* it to work.

Subject: Request for help w/portable satcom

I am planning a hiking and backpacking trip and would like to try
portable packet ops via satellite. I am familiar with packet but have
never done any sat work. Is it feasbile to do satellite packet in the
field with a handheld and "portable" antenna? Any suggestions/advice
would be much appreciated. Thanks.

Here's an original idea here....

IGNORE THE ASS... KILL FILES ARE OUR FRIENDS

I added Burt to my killfile, and WHOA.. the number of messages my newsreader
thinks it has is about half what it was.

Now... if there is only a way of filtering out responses.

BURT,
Annoying, slandering, mean-spirited are all easy attributes
and you excel in every field. You occasionally kinda sorta
show some intelligence. Why don't you quit taking the LAZY
route of cross-posting, and instead narrow it to the respective
group.
If seeing the responses generated by your remarks fascinates
you, I'm sure somewhere in the halls of M.U. is a psychology
professor that may be able to help you.
Of course, practicing what you preach would be nice too !!!

Geez, don't give him a clue! I've got a killfile that zaps all postings to more than 5 newsgroups, since anything that widely crossposted is always a waste of time. I had idly wondered why all the Burt followups had dropped off my radar, but was mainly just happy that they had. (I happened to trip over your posting while experimenting with a different newsreader configuration.) Burt, *please* keep on crossposting, it really helps me out.

(BTW, I also kill every post with a subject in ALL CAPITAL LETTERS. They're also uniformly worthless. Funny how these things work.)

You just go to show that "foamers & droolers", do have a place
in this world. Even an idiot like you can find your way into
Ham radio, an computers. Now if only you had something worth
while to say or do..?
If nothing else you are fun <?> to watch <???>. You at least
give us something to laugh at...

BTW> If life gets too much for you to handle, there is a site on
the www// that provides information on the: Do it yourself -
Frontal lobotomy <using 38 - 357 - 45 or what have you>,
Do it yourself Electro Shock therapy <just requires 2 pieces
of number 6 wire an access to a 220v electrical panel.> or
the ever favorite Birth-Control Retro=active classes.

Now you can see how boring it is reading useless crap...
Do yourself a favor, find a new or different hobby...
Unless your 10-13yrs old & like flaming & whinning...

I have a 736-R, just got. I really enjoy this radio, The one drawback I see is that it is not 9600 ready. I got the factory mod for this and I was curious what other people need about the FM filter Yaesu recomends you change ? On my radio this seems to involve unsoldering the old filter and putting in the new one. Something I really do not want to do. Has anybody out there had any luck on the 9600 birds using the FM filter that came in the radio ?

thanks

Scott, no one mentioned censorship. There was a request to the UFO guys
to edit their headers so as not to broadcast to other newsgroups than the
ones that they read when responding to a SPAMED UFO posting. A little
consideration would be in order here. If you are offended by this then
maybe you don't understand what we are trying to say.

>assume that the beach was made of dimes?

First of all, if you reach down on a _pebbly_ beach and pick out that unique-looking dime, you've already done some discriminating. I'm suggesting that our sun is by no means "unique" in the sense that dime is on the pebbly beach. As we discover more planets around other suns, I'll wager there will be plenty of others that will roughly fit the description of this one, in terms of distance from their sun.

And seconly, if you reach down, on that pebbly beach, with your eyes closed and pick up a dime, are you really going to tell me that you would think that this is the _only_ dime on _all_ beaches of planet earth? I seriously doubt it. I think you'd say "Gee, ain't that great, I picked up a dime."

The way we solved this is to set the offset (or whatever your program
calles the "error correction value" for antennas that are off by a few
degrees) to 180 degrees.

This name south into north etc. Install the az rotator with the stop to
the north and all is well.

No, it wasn't an article. I posted a piece on the amsat-bb@amsat.org mailing list pointing out that if you put a stick in the ground on a sunny day on flat, horizontal ground, and note the tip of the shadow at two times split around local noon, then the line connecting those two points is (nearly) an east-west line. The (nearly) deviations from "perfect" are zero at the solstice (Jun.21 and Dec.21) and are < 1/2 degree maximum at the equinoxes (Mar.21 and Sep 21).

This trick goes all the way back to the Egyptian pyramid builders who used it to align the bases of the pyramids N/S/E/W.

The "BBB-4" is a broadband 0.2 to 11 kHz V.L.F. receiver with a
passband peak at approximately 2 kHz, and is designed to receive
naturally-occurring V.L.F. phenomena (such as "whistlers") that occur
as
electromagnetic (radio) waves at audio-frequencies. This receiver was
designed to be hand-held, and its output patched to a microphone-level
input
such as a tape-recorder or speaker-amplifier (such as the one available
at
Radio Shack ("Mini Audio Amplifier/Speaker" cat. # 277-1008).

Dissatisfied with more complicated and cumbersome multi-turn loop
receiver
schemes, I opted to design a whistler receiver which was simple to
build and
use, but was as sensitive and low-noise as possible while being highly-
immune to broadcast station overload.

The BBB-4 V.L.F. receiver circuit ("BBB-4" standing for a fourth version of my "Bare-Bones-Basic" designs) is remarkably sensitive and works very well with short whip antennas between 30-60 inches in length,
since it operates on the same principle as high-impedance "active antennas"
designed for other frequency ranges (such as long, medium or shortwaves).
The BBB-4, due to its F.E.T. "front-end" being a high-performance J-FET,
has an input impedance of about 10 megohms, which is why the short whip

antenna--more correctly called an "electrical-field probe"--works fantastically
for being such a tiny fraction of the received-frequencies' wavelengths in
size (the ultimate isotropic antenna).

R1 and C2 act as a roll-off to frequencies above about 20 kHz, efficiently eliminating potential receiver overload/intermod from Loran-C
(100 kHz), strong AM-BCB signals or SWBC signals, and frequencies up into the VHF ranges. R2 sets the gate impedance for the J-FET. R4 and R3
set the optimum bias on the FET for maximum dynamic range and minimum susceptibility to overload and intermod. C3 and C6 slightly helps roll-off
low-frequencies such as powerline "hum." The "pi-filter" consisting of C4,
L1 and C5 roll-off frequencies beginning at about 7 kHz, so there are not
excessive levels of 10.2 - 13.6 kHz "Omega" signals or higher frequency
signals, which can create problems with the recording system connected to
the output of the receiver. R5 to R8 , Q2 and C7 form a fairly low-noise
Class-A audio amplifier which boosts the output from Q1 to a level plenty for
all microphone-level recorder inputs and even some more "sensitive" line-
level inputs. Bypassing R3 (1K) with a 2.2 uF cap will boost FET gain somewhat, esp. the higher frequencies--depending on your location and listening conditions, this may or may not be desireable.

The circuit can be built on perfboard such as IC-LSI boards or even wired point-to-point, as layout is not very critical. However, the parts'
values ARE critical for optimum passband shape and sensitivity. L1, the
inductor, can either be a 160-200 mH choke or the Radio-Shack 1K to 8 ohm audio

transformer available at Radio-Shack (cat. # 273-1380). Use the black and
green or black and blue wires (the center-tap and one end of the primary
winding). The audio transformer was used since it is easily available at
Radio Shack stores. In fact, ALL the parts with the exception of the 2N5484
FET are available at Radio Shack. Very good performance (but slightly
reduced gain) can also be had if a 2N3819 J-FET, available at Radio Shack,
is used. If so, R3 must be 220 ohm and R4 must be 1K, because the 2N3819
needs different biasing than the 2N5484. Also, if you use the Radio Shack
2N3819 FET, you might wish to reduce C4 and C5 to .033 mF, since there
will be less high audio-frequency output from the 2N3819. Keep C4 and C5
047 mF if you live in Hawaii or within 300 miles of La Moure, ND (south-
eastern North Dakota) due to the Omega-navigation transmitters (frequency
stepping from 10.2 to 13.6 kHz) being located there. Capacitors C4 and C5
work with L1 to reduce Omega to tolerable levels. Solder the J-FET into the
circuit LAST, and take measures to protect the FET from static electricity.

The total cost for parts (not including an enclosure) for the BBB-4 are in the
neighborhood of $15-20 U.S. A rugged telescoping-whip antenna is the GROVE
ENTERPRISES "ANT-8" 7-46-inch telescoping whip with a BNC
connector. This is available for $16.95 from Grove Enterprises, P.O. Box 98,
Brasstown, NC 28902-0098, U.S.A. (Order Line 1 (800) 438-8155. They
send out a free catalog.

Another telescoping whip antenna of like design is
available from C. CRANE RADIO CO. in Fortuna, CA in Fortuna,
California (800) 522-TUNE (522-8863). E-field-probe receivers of this type
need to be operated at locations away from trees, buildings, or other
obstacles by about 100 feet/30 meters. This is because received
signal levels (due to E-field attenuation) will be poor if the receiver is
operated too near (or under) such obstructions.

The greatest nemesis to monitoring and recording naturally occurring
VLF phenomena are electric a.c. powerlines, which emit annoying hum at

50/60 Hertz and also harmonics beyond 3 kHz. The only cure for this "hum"
problem it to locate monitoring sites well away from a.c. powerlines. Locations at least 1/2 mile/1 km or so away from a.c. powerlines will begin
to be acceptable, though the farther you can get from powerlines, the better.

Hilly or mountainous terrain (with open areas free of trees) offer larger areas
away from powerlines, though large fields and meadows where the powerlines are shielded by trees, etc. may be surprisingly hum-free. Remote
locations such as deep into desert and wilderness regions offer the most
rewarding locations, both aesthetically and electrically, to listen, and you may
be able to get over 10 miles from the nearest powerline. If so, you can make
the receiver's antenna several meters in length (keeping it vertical) for
maximum sensitivity. Longer vertical antennas or horizontal wires may either overload the receiver, or in the case of long/low wires, will create a
mismatch which will actually reduce output. Experiment here.

NOTE: A 100 mH choke across C5 (th secone .47 cap in the audio filter will greatly reduce the below 1 kHz frequencies, including pesky power-line hum. This may enable you to listen far closer to AC power-lines including even some backyard locations!

Grounding is non-critical. High-impedance FET receivers of this type need only minimal grounding to work well_even just the body of the listener
holding the metal enclosure of the receiver will be adequate in most cases. If
recording, it is best to stick a 8-10 inch ground rod into the soil to reduce the
possibility of feedback with some tape recorders. Also, a small ground-rod
(8-10 inches long) will cut noise from body or foot movements (due to capacitive interaction with the ground). If you ground the receiver to objects
such as fences, beware that certain grounds may couple a.c. powerline noise
to the receiver, which is why I recommend a simple Earth ground.

Better quality tape recorders, with adjustable input level controls, are
desirable, as "cheapie" portable recorders with auto-level control will often

have annoying variations in record level due to lightning-sferics. And, these
cheap recorders also put noise of their own onto the tape. A shielded 600 ohm
patch-cord will suffice between the output of the BBB-4 and microphone
input of a tape recorder.

The most common naturally occurring V.L.F. emissions to be heard
are the myriad "crackling and popping" sounds of lightning-stroke
electromagnetic impulses from lightning storms within a couple thousand-
mile radius of the listener. Since there are nearly 100 lightning storms in
progress anywhere on the Earth at any given time, and that millions of
lightning strokes happen daily, there is never a moment when these lightning
"sferics" will not be heard. However, the density and strength of lightning
sferics can vary day-to-day and hour-to-hour. Mid-winter offers the lowest
density of sferics, and summer evenings can be full of a dense barrage of
strong sferics.

The other most common (and most awesome) sounds are "whistlers"_eerie
descending tones caused when the lightning electromagnetic energy gets
"ducted" along Earth's magnetic lines-of-force (magnetosphere) to the
opposite polar hemisphere, then gets rebounded back to the vicinity of the
originating lightning stroke impulse. However, there doesn't have to be
lightning within sight or even a few hundred miles of your listening
location_lightning from storms up to thousands of miles away, particularly if
more to the north of your location, can generate large whistlers which are
heard continent-wide. On the other hand, it's quite spectacular to watch
distant lightning storms generate whistlers in the receiver's output_you hear
the huge "crack" of the lightning impulse sferic, then, if the conditions to
support whistlers are occurring, a whistler may follow from 1 to 2 seconds
after the lightning stroke.

Optimum times to listen for natural V.L.F. phenomena, such as
whistlers, are between sunset and sunrise, with the midnight to sunrise period
generally being the best. Statistically, the greatest activity to be heard is

around dawn and sunrise (4-7 a.m. local time)_sferics tend to be fairly low as
compared to the sunset period.

Dawn Chorus can occur during magnetic-
storms, and will peak anywhere from an hour before sunrise to 2 hours past
sunrise. Whistlers can occur at anytime, but the period of minimum
frequency is midday. Sometimes, activity can also occur just after sunset,
but sferics will be fiercer. Lightning sferics will be most fierce during
summer afternoons and minimum (generally) an hour or so after sunrise until
thunderstorm activity picks up later on. Winter can present delightfully low
lightning sferics_other activity will be more "in the clear."

Tweeks, the "ringing/pinging" sounds of sferics caused by the Earth-
surface/ionosphere "waveguide," will be best from an hour after sunset to 2-3
a.m. local time, gradually tapering off toward sunrise. Their number and
intensity of "pinginess" can vary from night to night_some nights they can
sound rather "pale," but other nights they can ring in a variety of beautiful
mixtures and pitches. Whistlers, which may or may not be heard on some

days or even weeks, can range in sound from quite pure notes to very diffuse
"breathy" sounds. They can swoop in frequency from very high to low, or
abruptly cut-off as they descend in pitch.

Don't be discouraged if you listen for several hours, or several sessions on
different days, without hearing whistlers or other natural radio phenomena.
When you DO hear them, it will make up for the "dry" times, as there is

nothing like "live" listening!

Listeners located north between 40-55 degrees north or south latitude
are in the optimum latitudes for monitoring natural V.L.F. phenomena. If
you can see visible Aurora (Northern/Southern Lights) from your location,
you are at a great location for natural V.L.F phenomena monitoring!
Latitudes between 20-30 degrees north and south will hear less, but at times,
still loud phenomena. I've heard whistlers just fine in

Hawaii_presumably
those whistlers were louder farther north, but still, they were heard!

DO NOT operate this receiver (or any other) when nearby lightning
threatens! Take appropriate lightning precautions when lightning is
occurring nearby (within 5-10 miles). Nearby lightning will cause
excessively loud sferics in the receiver's output, and whistlers will
not be
louder just because lightning is close-by. Reserve listening for fair
weather
periods_most often, the best and loudest natural V.L.F. phenomena will
happen during clear weather, since lightning can be quite distant, as
mentioned above, and still spawn loud whistlers.

If you would like to purchase a ready-made receiver which is
fashioned like a "Walkman-style" whistler receiver, e-mail me for
details. I don't want to "advertise" here.

The Longwave Club of America also has other designs of ELF/VLF
"whistler"
receivers, and has a BBS run by member John Davis. The LWCA BBS is at
(706) 672-0360 with speeds up to 9600 (8,N,1). Download the
ALLFILES.TXT or ALLFILES.ZIP for listing of files avail on this BBS.

A WWW URL of natural radio WAV files (most 8 bit/11 kHz sampling
compatible with Windows "speaker.drv" as well as 8-bit sound cards,
plus a
few 16-bit files for 16-bit sound cards are available for downloading
at:

http://www-pw.physics.uiowa.edu/mcgreevy/

Special thanks to Larry Granroth a the U. of Iowa for doing this for
me!

Coordinated monitoring of naturally occurring V.L.F. phenomena
among individuals and groups has a strong potential to uncover new and
previously unknown characteristics of these phenomena, particularly if
those
monitoring simultaneously are located hundreds and thousands of miles
apart. Research and understanding of V.L.F. phenomena has been
hindered
by a lack of listeners, which is something a few research groups, both
amateur and professional, are attempting to alleviate.

I hope you enjoy this rcvr. and are interested in monitoring and
studying naturally occurring VLF radio phenomena for yourself. It is
quite
fascinating, especially when one ponders the fact that Earth's natural
radio
emissions have been "sounding-off" way before we Humans came into
existence and started making radio waves of our own! Happy Listening!

Stephen P. McGreevy
Originally released November 1993, updated November 1995

Additional Tips:

1) A 100-200 mH inductor connected across C5 the will act as a high-pass filter, nicely attenuating 60-360 Hz powerline emissions (hum).

2) If you want less gain from the Q2 stage (and slightly lower noise), reduce R8
to 4.7K.

3) Listen to WWV-shortwave (2.5, 5, 10, 15, 20 MHz) for geo-magnetic indices at 18 min. past each hour (WWVH-Hawaii at :45). A K-index at or above 3 indicates enhanced conditions for natural phenomena,
especially chorus.

73,

Stephen P. McGreevy, N6NKS

PEOPLE!!!

IGNORE THIS CRAP!!!

JUST LIKE ANYONE ELSE IN THE WORLD WITH A POOR ATTITUDE, IF YOU IGNORE THEM
THEY WILL GO AWAY!

(But I have to admit, the new burt signature is a roll!!) ahhaha

I dont many hams over 40 years old, so, I guys Im not a ham then.. Most
hams I know are all under 40, some under 20. And about 30% of them are women.
Its the 90's, and women enjoy hobbies of this sort also. More power to
the lady trying out for playboy, good luck to you. I used to date a model
that worked for "Hef".
You'll have fun im sure..

See ya all later...

I am not familiar with 'Multifax', but can offer some very good reasons why shortwave satellite imagery receivers provide more reliable images of much better quality than on I-net. I have only used systems of ERIM (Environmental Research Institute in Michigan) and Bob Allen in Adelaide, Australia, but several advantages are:

* Images can be downloaded in real time. Thus, they are available for interpretation and aid to weather prediction *immediately*.

* They are more reliable, although downloading may sometimes be a problem.

* One can use software to more effectively zoom on areas of interest.

* Temperature data is stored in pixels of the satellites scan, so that temperatures of ground and clouds are available. Because of that, a user can enhance images as they choose.

* METEOR and NOAA polar orbiter images are often available.

I am happy to have images available on I-net, but would rather download them to make accurate weather predictions.

2408. OSCAR antenna rotors and coax placement

Newsgroup: rec.radio.amateur.space
Date: 1995-11-15 00:00:00 UTC
From: sufana@ceco.ceco.com
Message-ID: <DI3AI0.BF2@ceco.ceco.com>
Source record: 23715

I am thinking of buying a G5400 rotor for satellite work and was wondering if that rotor has the capability to make north think it is south and vice versa while under computer control. The reason for the question is that I have been involved with 2 schools that had a successful SAREX contact and we made sure that the rotors (normal azimuth not computer controlled types) would not run into a mechanical stop in the middle of the pass. I didn't want to wait 50 seconds or so for the rotor to go back around. So in most cases, our rotors had north as mechanical stop and for 1 mission (2 days ago) we made north into south and south into north. Obviously under hand control there is no problem (other than relabeling everything), but what about under computer control? I run Quiktrak.

A second question involves dressing up the coax cable off of the antenna. Does the pattern get screwed up if the cable is taped to the antenna boom to get back to the cross boom? Or does it really need to be hanging in a big loop?

Thanks in advance.

73s,

Hello,
if you are tired (like I am) of seeing meaningless, ego driven diatribe
posted and crossposted by Burt Fisher all over the Amateur Radio
Newsgroups,
try sending a E-Mail message to :postmaster@ccsnet.com and
postmaster@meol.mass.edu and tell them that you are tired of Burt Fisher
(k1iok@ccsnet.com and fisher@meol.mass.edu) constantly spamming the
amateur radio newsgroups and God knows how many others.(I've allready sent
my
complaint to them)

With any luck they might give Fisher all the attention he so desperately
seeks
and we can carry on our amateur hobby without his meaningless spams :)

Gary

To all radio amateurs

SB SPACE ARL ARLS023
ARLS023 AMSAT on TV on Friday

Here's an update on Amateur Radio's next scheduled appearance on network television.

The cable television Sci-Fi Channel on Friday evening's (November 17) ''Inside Space'' program will show a broad overview of the activities over the years of the Radio Amateur Satellite Corporation (AMSAT), along with scenes and accompanying discussion of other Amateur Radio activities, according to the latest word from AMSAT Executive Vice President Keith Baker, KB1SF.

Tentative plans are for airings on Friday evening the 17th at 9 PM Eastern Time and later in the weekend.

Footage shot recently by the Sci-Fi Channel of AMSAT Phase 3-D satellite construction and testing at the AMSAT laboratory in Orlando will be held for possible airing on ''Inside Space'' sometime late next year, closer to the projected launch date for the satellite, Baker said.

''Inside Space'' will air Friday, November 17, at 9 PM Eastern Time and again at 1 AM ET on the 18th. An additional airing of the program is set for 11 AM ET on Sunday, November 19.

2419. Even my wife thinks hams are...

Newsgroup: rec.radio.amateur.space
Date: 1995-11-17 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <48j44a$5i6@alterdial.UU.NET>
Source record: 23581
Cross-posted to: radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.policy,rec.radio.amateur.space

I received a call today from a ham who would not identify himself. I repeatedly asked him who he was, even saying to him that if he had an opinion worth anything it is reasonable to expect he state who he was. Still he he refused. I then commented that he was "so typical ham, no guts." My wife then told me to get off the phone and stop wasting time with gutless hams who hide behind their mikes. As I made one more effort to identify the caller, he hung up. He also made a veiled threat that bad things would happen to me, I retorted I might take it more seriously if he were not a gutless ham.

This call is just so typical of hams, brave at a distance.

2421. Mir Space Station QSL cards

Newsgroup: rec.radio.amateur.space
Date: 1995-11-17 00:00:00 UTC
From: randyk@emf.net
Message-ID: <48h1jn$ig@emf.emf.net>
Source record: 23583

From: Dave Larsen N6JLH
Date: Nov. 17th. 1995

I have been granted the privilege from Sergji RV3DR, to become the
Mir QSL manager for the USA area hams. If you have worked Mir and would like
a card I would need your QSL card with date, time, and mode for R0MIR and
R0MIR-1.

Send to:
=======
N6JLH
POB 1501
Pine Grove, California
- 95665 -

=========
Important: Please make sure you include a *_business_* size SASE.
========= ==

For right now I cannot accept SWL's; however, KB to KB contact's with R0MIR
are fine. If you need info or have questions contact me via the following
paths.

To all radio amateurs

SB SPACE ARL ARLS024
ARLS024 Hams Contact Atlantis/Mir Astronauts

ARRL has received dozens of reports from amateurs that have made successful voice contacts with the crew aboard the Space Shuttle Atlantis and the Mir Space Station Complex. The two spacecraft have been docked together since Wednesday, and are orbiting 245 miles above the earth at approximately 17,000 mph.

Earlier this week, the Atlantis astronauts completed 5 scheduled ham radio contacts with US students as part of the Shuttle Amateur Radio EXperiment or SAREX. These groups included students from Franklin Junior High School in Pocatello, Idaho, Norwalk County schools in Connecticut, Lake Street Elementary School in Crown Point, Indiana, Round Lake-area schools in Illinois, and Quimby Oak Junior High School in San Jose, California. The students were assisted by their local Amateur Radio clubs and many AMSAT SAREX volunteers.

Amateurs trying to make random contacts with the astronauts should be aware the crew is using separate receive and transmit frequencies. Do not transmit on the shuttle's downlink frequency. The downlink is your receiving frequency. The uplink is your transmitting frequency. The FM voice downlink is 145.84 MHz. The FM voice uplinks are 144.45 and 144.47 MHz. The crew will not favor either uplink frequency, so your ability to communicate with SAREX will be the ''luck of the draw.'' Transmit only when the shuttle is within range of your station, and when the astronauts are on-the-air. The astronaut's call signs are KB5AWP, KC5NRI, N5SCW, KC5ACR, and KC5RNJ. There is no hardware to support packet radio contacts from the shuttle during this flight.

QSL cards and reports may be sent to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a

SASE using a large, business-sized envelope (10) if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

Thanks to SAREX Volunteer Gil Carman, WA5NOM, at NASA Johnson Space Center for generating the following Keplerian element set, JSC-914:

Mir-Atl

If you guys want to spam all the rec radio amateur gorups I couldn't care less
but why the H*ll are these stupid ham debate posts spilling into the
shortwave, scanner and puzzles (among others) groups. Watch the
reply lines guys. One spam is bad enough but when you all reply to all
the groups it is just plain RUDE.

Leave the rest of us in peace -- and if your must spam, do it via e-mail
to the original poster and again, leave the rest of us in peace.

Thanks for letting me rant. 73 //kvz

2433. STS-74 Contact Without Good KEPS

Newsgroup: rec.radio.amateur.space
Date: 1995-11-19 00:00:00 UTC
From: durham@lobby.ti.com
Message-ID: <48nsp4$7vv@superb.csc.ti.com>
Source record: 23595

Finally made contact with Atlantis. Just luck, since all the KEPS
I have found don't agree with NASA Select reportings of position. The
AF NORAD KEPS update clerk must be one of the "nonessential" government
employees since there are no new KEPS from that site. The ARRL KEPS
posted here are from yesterday and result in about 30 minutes error
in AOS. The pile up must have been tremendous cause KC5ACR was
acknowledging calls as fast as he could get on and off of the mike button.

If anyone knows of a good source of *fresh* KEPS, let me know so I
can use them for the next shuttle in case the political blackmail is
holding new KEPS hostage :)

HOORAY! K5MBV

>of the layers of atmosphere since the earth began (no ozone layer now no life,
>if there was an ozone layer then no life). You cannot doubt the fact that

The argument against that, at least in my mind, is that life is very tenacious
and adaptable. Life at the bottom of the ocean lives off of volcanic vents
and uses a completely different metabolism than ours. Oxygen would kill it.
Life in Yellowstone lives in hot springs above the boiling point. I think
the constant rain of organic molecules (spread out in space) and the existance
of water-based terrestrial planets (predicted by comfortable planetary theories
of formulation) will create conditions close enough to allow life.
The real question is, WHEN and WHERE? Are they close enough, and current
enough?

To all radio amateurs

SB SPACE ARL ARLS025
ARLS025 Shuttle returns hams

The Space Shuttle Atlantis touched down at the Kennedy Space Center in Florida on November 20, 1995 at 1701 UTC. Its return to Earth concludes Amateur Radio activities for this shuttle mission, and follows a successful docking with the Russian Mir Space Station. Throughout the mission, the entire Amateur Radio-licensed crew delighted hams around the world with 2-meter FM voice contacts from Earth orbit.

Amateur Radio activities will again be conducted from Atlantis during mission STS-76, scheduled for launch in March 1996.

For more information about the Shuttle Amateur Radio EXperiment, or SAREX, telephone the ARRL Educational Activities Department at (860) 594-0301 or email sarex@arrl.org. SAREX is sponsored by ARRL, the Radio Amateur Satellite Corporation (AMSAT), and NASA.

Hi All, I have the shareware program JVFAX71. I am using the KPC-3 as the demodulator.

When I connect my computer, the S/W receiver has a hum on the speaker, as I connect the earphone wire. I know the hum is coming from the computer. Does anyone know how to kill this hum. I tried ferrite beads, and capacitors but no luck. Do I need a RS-232 isolation of some sort like optical isolation?

Thanks, Lawrence

Personally, I think a group of less than laudable people got together and
decided to have fun by posting a series of totally meaningless messages in
a set of totally inappropriate places. Theater of the absurd. Okay guys,
we've seen it; I give it a 3 on difficulty and a 4 on creativity. No
medal, not even honorable mention. So, wrap up the production, go away...
don't call us, we'll call you.

If I was smart, I'd have a clever .sig

>one that is _identical_ to ours.

What I am trying to say is that if it's a particular characteristic
of the grain that we are looking into, then we will not find another match.
To add to that, if we take it to extreems ... due to the unsertainty principal
we will never be able to know if there are two grains alike ! A concept that
makes us feel even more lonely. If physics is such that it's not possible
to travel between any two star systems were life does exist. Say life exists
one thousand light years away. Imagine if there is a party of lucky stars sys
were they are teaming of life, and they have known of each other's existance
but earth is "blessed" to be forever alone. If were lucky, only to be able
to listen in. Now that would be a downer :-(

>
>Bert
>manfredi@engr05.comsys.rockwell.com
>

It is my opinion that we do not know yet what it takes to make life.
Any form of life, or anything as dynamic as life even if it's not life
as we know it. (Damn it I am trying to avoid sounding like a ST character :-)

So in the end you are concluding that life is possible out there.
I can only say that it spans from 100% that life is out there to 0%. In
essence I am saying nothing. And the unsertainty of the above range is
because we "know nothing" (Sargent Sultch: Hogans heroes :-) of what it
realy takes. Another note, don't let the 0..100% fool you because the
number "0" is a small component of the rest of the range. It's just

pshycological. The fact is that there are either none or any number of life forms other than on earth.

George

>self-centeredness: our planet and the universe was created just for us.
>They've got it the other way around: we and everything else were created
>for this planet.
>
> Algis

Is that an argument against it ?! To be self centered is against
physical law so it's not possible ? When you dream in your sleep,
you may see a large environment teaming of people. You may play a small role
in it. Are you self centered that you make all this just for your self ?
In essence all this was created for your own benefit, none of the "beings"
in your dream have any other relevence.

The fact is that it is quite possible that everything was created
as a joke of one ... say person. Who will stop him ? It's just that the
current moral values of our society that make you argue in that way.

George

I have had very good luck with the Quorum Explorer card/software. The card contains the receiver and logic and the software is excellent. I dont have it handy but quorum has a bbs number.

SB NEWS @ AMSAT $SPC1120
* SpaceNews 20-Nov-95 *

BID: $SPC1120

=========
SpaceNews
=========

MONDAY NOVEMBER 20, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* MIR QSL NEWS *
================
Dave Larsen, N6JLH, is now the new QSL manager for the USA for all Mir QSL
cards for the callsign R0MIR and R0MIR-1. All older callsigns have to go
to Russia.

Dave has been granted the privilege of acting as QSL manager from Sergji,
RV3DR. QSLs must include date, time, and mode of contact. Cards for SWL
reports will not be handled by Dave. If a contact is made with the Mir
packet radio personal message system, then the message number issued by
the PMS should be included on the QSL card.

QSLs must be sent along with a business-sized self-addressed stamped
envelope (the card will not fit in a regular-sized envelope). A "green
stamp" to cover postage would also be appreciated.

QSLs should be sent to:

N6JLH
P.O.B. 1501
Pine Grove, California 95665
U.S.A.

[Info via G. Miles Mann, WF1F]

* STS-74/SAREX NEWS *
=====================

The SAREX Astronauts were very active on STS-74, making numerous voice contacts with groundstations on 2-meter FM. It should be noted that Canadian Astronaut Chris Hadfield, KC5RNJ, received his Canadian Amateur License last week. His Canadian callsign is VA3OOG. He used this callsign on several passes other North America, particularly when the Shuttle traversed over Canada.

Last week, the Atlantis astronauts completed 5 scheduled ham radio contacts with US students as part of the Shuttle Amateur Radio EXperiment or SAREX. These groups included students from Franklin Junior High School in Pocatello, Idaho, Norwalk County schools in Connecticut, Lake Street Elementary School in Crown Point, Indiana, Round Lake-area schools in Illinois, and Quimby Oak Junior High School in San Jose, California. The students were assisted by their local Amateur Radio clubs and many AMSAT SAREX volunteers.

QSL cards and reports may be sent to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope (#10) if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

[Info via Frank H. Bauer, KA3HDO, of the SAREX Working Group]

* INFRARED SPACE OBSERVATORY (ISO) IN ORBIT *
==========

The 80th launch of a European Ariane booster was successful on the night of November 16, 1995. The Ariane 44P rocket liftoff was performed from the Guiana Space Center in Kourou, French Guiana, South America.

Built by Aerospatiale for the European Space Agency (ESA), the spacecraft will have a major impact on every field of astronomy, spanning from solar systems, the birth and death of stars, and the most extragalactic sources.

The Infrared Space Observatory (ISO) was placed in highly elliptical orbit of 570 km by 71,499 km, inclined 5.2 degrees, with a period of 24 hours. The primary objective of the mission is to provide spectroscopic, photometric, imaging, and polarimetric observations of selected celestial sources.

NASA's Deep Space Network (DSN) will support the mission after the launch and early orbit phase (LEOP) is complete. The Goldstone, California 26 meter and 34 meter antennas will provide support for real-time telemetry and commanding. The ISO Control Center is located in Villafranca, Spain. Tracking support from Goldstone will be provided during a 8 to 10 hour period per day. Telemetry and tracking data will be downlinked from the spacecraft at 2266.5 MHz with a real-time data rate ranging between 4,096 - 32,768 bits per second.

[Info via Keith Stein]

* SORRY! *
==========
Sorry, but due to a very busy schedule and a minor health problem, there
was no SpaceNews issued last week (13-Nov-95). Thanks to all who sent
messages and news items during the week.

Hi Lawrence,

First, what kind of hum is it????
What kind of antenna are you using???
Have you checked the shells of the rs232 cable with a VOM???

No. It would NOT be reasonable to make those conclusions based on a
single sample. That's the point here. We don't have ANY basis for a
statistical analysis of the situation. You picked up one thing, and
it was a dime. You can't assume anything about the distribution of
dimes on the beach, so you can't conclude anything about the total
number of dimes present. You picked up something, and it wasn't a
baseball, but you can't conclude that baseballs are rare. We have
but a single example of a life-bearing planet, so we have no way of
extrapolating -- a statistical analysis based on a sample size of one
has a 100% margin of error.

Burt Fisher <k1oik@ccsnet.com> writes:
> Frequently I hear hams say, THE name HERE is_____.
>How often do you say when you meet someone (assuming your name
>is Charlie), THE name HERE is Charlie? You never do that right?

It's a different culture, Burt, and you're experiencing culture shock. Amateur Radio has been around a lot longer than you have, and it has developed its own "code of conduct" and a particular way of speaking. In Mexico, one does not say "My name is ____" -- to do so would be considered an EXTREMELY impersonal statement! One says instead "I am called ____" -- and that's just the way it is.

You seem to be ridiculing a common practice merely because it sounds impersonal to you. From the other point of view, you are attempting to use face-to-face speaking conventions when you are communicating with voice only, and that sounds just as strange to many "oldtimers" as the way it's done now sounds to you.

Remember that for the most part, radio communication is just barely interactive; while you are talking, there is no feedback from your listener(s). Don't expect to be able to use the same conversational style in all situations. For instance, how often do you begin a short monologue with the phrase "Three minutes ago, so-and-so said:" and a direct quotation? How often do you punctuate your sentences with "emotion" indicators? Be flexible. When in Rome, do as the Romans do. Don't flame them lest you be burned yourself. (Oh, sorry. Too late.)

I have one of the first generation Quorum cards (without the receiver on board etc.). It works quite well, even with the newest QFAX software (available on ftp.qcom.com in demo form too).

They have a good rep too.

2470. Antenna assistance

Newsgroup: rec.radio.amateur.space
Date: 1995-11-23 00:00:00 UTC
From: kyrrin@wolfenet.com
Message-ID: <kyrrin.822.00AB2946@wolfenet.com>
Source record: 23632

Hello, fellow hamateurs...

Considering that I've not done anything remotely resembling antenna math for at least ten years, I need a bit of assistance.

Specifically, I'd like to construct an antenna that will allow me to pick up the GOES West bird at 468.8250. This is due to my acquisition of a neat little clock that will display NIST time based on the sat signal, and will also provide an IRIG-B time code output.

I'm told that I'll need circular polarization, right-handed, and some suggested types so far have been quadrifilar, Yagi, or helical. Based on my own limited knowledge, and the fact that I'm in an apartment and cannot put up any sort of supporting structure, I feel that a helical would be best. Please correct me if this is a bad assumption.

The clock unit has a receiver built in. All I need is to connect an appropriate antenna and let it lock on to the bird. What I need are design specs for such an antenna, hopefully something that I can build without more than hand tools or breaking the bank.

Another option is to purchase a surplus commercially-made antenna. If anyone knows of a source for such, that would also be appreciated.

For reference, the clock involved is a Kinemetrics/Truetime model 468-DC. The manufacturer is already sending me a manual for it.

Thanks in advance. E-mail to kyrrin@wolfenet.com, please.

==Bruce

The root cause of this problem are the 'original' postings of one BURT FISHER.
His garbage gets replied to by others who inadvertently post to all the
newsgroups the original spammer included in the distribution list.

In the future forward a copy of spam messages from Burt Fisher to the
postmaster at his service provider. Fisher's address is:
k1oik@ccsnet.com therefore you can forward his crap back to place it came
from at postmaster@ccnet.com.

If enough of us do it he will get tired of it and take steps to stop it.
There is no need to even write anything on the forwarded message. They
know who Burt Fisher is, do you think your the first one to complain!? :)

Aside from being a processed nuclear survival food, spam has its own endearing definition as it related to the Internet.

"Spamming" is when a message is posted to serveral, even all, newsgroups at once. Prime examples of spamming occur when some goober posts a "Make 20 Zillion Dollars by Picking Your Nose" post to every single newsgroup in existence. Then, in each of those newsgroups 50 people post a response saying "I picked my nose and only made $.73 you &***#$%!!!!". Most usenet programs will then post that reply to every group the original post appeared in.

I notice that I am posting this response to all the rec.radio.xxx groups. Since I don't know where this thread originated, I'll leave it that way....and now I too have become a "spammer"!!!

Hope it is now clear as mud!

AA> We have but a single example of a life-bearing planet, so we
AA> have no way of extrapolating -- a statistical analysis based
AA> on a sample size of one has a 100% margin of error.

Alan,

The use of the term "100%" here is mathematically in error, as
is the application of statistical analysis. You are treating
the question as though induction were the only method available
to find a solution, and as though there were only one or two
pertinent facts available. Neither is the case.

In your analogy, you specified that the person is on a beach and
finds a dime. That implies familiarity with the characteristics
of both beaches and dimes. Our familiarity with those things
skews the inductive process you are trying to exemplify,
nullifying your point.

The real question being asked might be expressed as "How likely
is it that there is life on another planet within X light-years
of Earth?" A wealth of information is available that bears on
this question -- information both on the many living things we
know about on this planet, and on the things that can be seen or
otherwise detected in Space, where other planets might exist.
Both induction and deduction can be used to infer a great deal
about the nature and likelyhood of life on other planets.

Unfortunately, "likelyhood" is just a synonym for "probability",
and nobody really seems to know what probability is. It is one
of the most frequently misunderstood and mis-used concepts.
Even in simple situations like games of chance, the "laws" of
probability are constantly mis-applied.

It's true that from a single data point, no inference can be
drawn, but there are heaps of data available, and many kinds
of analysis that it may be subjected to.

Not really. You have posted 'velveeta' (Vegetarian spam).

The difference is that velveeta is crossposted (note the newsgroup line). On the internet, this message will cross the backbone once, and be stored on the ISP host harddrives once, with references to the crossposted newsgroups. It can't even really be called velveeta because you were answering a valid question, even if it was off-topic for the newsgroup in question.

Spam is a message, usually commercial in nature, that is posted once for every newsgroup. In this case, the same message will cross the backbone and be stored on the harddrive once for each newsgroup, resulting in massive waste of bandwidth and disk space.

Internet lore: the term was derived from the Monty Python skit, were 'spam' was said/sung numerous times. It was a really funny skit, too.

Hope this helps.

A more interesting group of 'sounds from space' are the whistlers,
chirp and chorus at ELF frequencies caused by the noise generated
by lightening flashes bouncing along the Earth's magnetic field
between the ionosphere in the northern and southern hemispheres.
All frequencies can be heard with a long wire, a quiet site and
a sensitive amplifier since they are 'audio frequencies'. That is
they do not have to be detected like a radio signal.

Whistlers sound like decending tones, Chorus like a flock of
birds chirping and chirp, well.... chirps.

Your best bet is to get yourself a copy of "THE ARRL ANTENNA HANDBOOK" which is available at almost any store that caters to Hams. Further I used to borrow it from my local library before I purchased my own copy.

I would reccomend a cross polarized yagi, elements are short and you can get lots of them on a relatively short boom, since you are not transmitting you do not have to be as precise as someone trying to uplink to the bird. You wont need too many elements but 12 or so would still be nice and small.

Forte's Agent download instructions say it takes 10 Meg of disk space
and the commercial version costs $29.95. Are there any free ones out there
that support Killfiles?

The reason I'm posting here is because of the interest that has been
generated by responses to a SPAMed post here and in sci.space.shuttle.
It looks like we may be needing an easy way to filter out the offsubject
responses by those not willing to edit their headers.

James E Muehlberg (muehlber@plains.nodak.edu) wrote:

: It's unfortunate that this tirade must continue.

True!

: Even more unfortunate
: that our younger readers must be exposed to this behavior by, I assume,
: adults.

Youngsters seem to (usually) be more sophisticated and sensible than
adults (usually) credit them with.

:I do not know Mr. Fisher, and even if I did, I would not comment
: about him on the net.

Your restraint is commendable, though, as yet, untested.

: Making personal attacks on people in public is
: just plain tacky.

Engaging in a little banter with a wind-up merchant is not quite the
same as no-holds-barred-go-for-the-jugular hatred propelled flame wars that
sometimes erupt. May I suggest you read Burt's earlier postings? He's
quite right about there being plenty of boring radio amateurs (I may be
one of them..), but, unfortunately, he forgets those who do not fit his
stereotypes, and lumps everyone together. He seems to be having fun
stirring people up. While I've enjoyed watching this, I did consider his
remarks about Germans to be unreasonable and tasteless.

:Do I sound like your mother?

No

: Well, yes. There is an
: absolute right and wrong. You are wrong.

Your opinion is that *I* am wrong. I do not believe that I have any
right to declare anything to be absolutely right or absolurely wrong.

: God gave us free will, though,
: but some still dont know what to do with it. I'll pray for you.--

Thank you, but please do not. I think it most important that people
take responsibility for their thoughts and actions, and, if ever judged, I
should be judged fairly on my own performance without aid from others.

News Xpress is a freeware newsreader that supports killfiles.
I'm not sure where to find it. Try CICA or the simtel archives.

Killfiles sure comes in handy for losers like Mark Hines.

2506. * Space Tourism Survey *

Newsgroup: rec.radio.amateur.space
Date: 1995-11-27 00:00:00 UTC
From: chrisl@SEDS.LPL.Arizona.EDU
Message-ID: <49bv35$pk6@news.ccit.arizona.edu>
Source record: 23666

What are your feelings about space tourism? Is this the type of thing
that you have been waiting for? Do you think there is no market for
space tourism? Yay or nay, let your voices be heard!

This year the topic of Space Tourism is finally starting to get serious
recognition from private and government circles. In early September, NASA,
in conjunction with the Space Transportation Association (STA) kicked off
a Tourism Study of their own to focus on orbital tourism and be completed
in a year. The "X" Prize Survey will serve as input for the NASA Study,
but intends to be completed in 3 months, reach world-wide for input, and
focus on parabolic flights and sub-orbital flights as well as orbital
flights.

Please take 5 minutes to have your input heard and recorded. We are
interested in responses from _all_ walks of life, not just space
enthusiasts.

The survey may be accessed at http://www.seds.org/xprize/survey
Postscript and Adobe Acrobat(tm) versions are available for download at
this URL as well. We welcome you to distribute this survey to your peers
and mail in the forms.

More information about the "X" Prize Foundation and it's goals can be
found at http://www.seds.org/xprize

Thank you. We look forward to launching the Space Tourism industry together.

2507. Info wanted: Ten Tec 2510

Newsgroup: rec.radio.amateur.space
Date: 1995-11-28 00:00:00 UTC
From: kharker@cs.utexas.edu
Message-ID: <kharker-2811951537110001@slip-58-4.ots.utexas.edu>
Source record: 23519
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.equipment

I was window shopping inside Austin Amateur Radio Supply this
afternoon, and I came across a really old (1985) radio review reprinted in
a small booklet about satellite operations that seemed to focus mainly on
Oscar-10. The review was for the Ten Tec 2510, which apparently coupled
a 10w 440MHz SSB/CW transmitter with a 2m<->10m ssb/cw transverter and
preamp.
While this wouldn't cover every satellite mode, and it most certainly
wouldn't handle 9600bps packet (I'm also interested in working pacsats
some day)
if one could be had cheaply, it might make for a good starting point for
me. I've already acquired a cheap HTX-100 10m ssb/cw rig I could use with
it.
Does anyone own one of these rigs or have any comments on them?
About how much would I expect to pay if I found someone selling one?
Anyone know of a source selling these?

Sorry about the previous response. My Newsreader is not working too good
at times. I lost the first response.

Try: http//www.amsat.org/amsat/AmsatHome.html
and: http://www.teleport.com/~n7ryw/asatpage.html

AMSAT membership gets you a lot of helpful information. I got free tracking
software and some "How To" handouts for a sign-up bonus. The dues help pay
for satellite constructuion and launches too.

2512. Dec-2-95 Balloon Flight EOSS-25 planned

Newsgroup: rec.radio.amateur.space
Date: 1995-11-29 00:00:00 UTC
From: tcline@lvld.hp.com
Message-ID: <49galv$nse@hplvec.lvld.hp.com>
Source record: 23524

For more info: http://usa.net/~rickvg/eoss.htm

Edge of Space Sciences (EOSS) is a Denver, Colorado based non-profit organization that promotes science and education by exploring frontiers in amateur radio and high altitude balloons.

EOSS conducts four or five balloon projects each year, sending scientific payloads to approximately 100,000 feet. An on-board computer and command and telemetry system provide for control and real time data down link of experiment data in the payload package. In many cases, live video from the payload is available and views of the earth and the edge of space have been made. Educational institutions and other scientific oriented organizations are encouraged to participate in EOSS projects and programs.

FLIGHT PROFILE FOR EOSS 25

LAUNCH DATE: 2-Dec-1995
LAUNCH SITE: United States Air Force Academy

LAUNCH SITE COORDINATES:

* 39'00.56 N
* 104'52.90 W

LAUNCH TIME: 15:00 UTC
EXPECTED TRACK: Between 45 degrees and 145 degrees azimuth
FLIGHT EXPERIMENT: USAFA Satellite Experiment and RMRL crossband repeater
PROJECT INTEGRATOR: USAFA and EOSS

FREQUENCIES:

* Telemetry:
o 144.340 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.
o AFA Telemetry Stream will be on 146.455. This will be in ax.25 format at 1200 baud. However, the data that appears on screen may not be intelligible as it is formatted for AFA groundstation computers.
* VHF/UHF Crossband Repeater
o Input 446.000 MHz
o Output 147.555 MHz

* ATV:
o EOSS Shuttle Video - 426.250 MHz AM (1 Watt output) - NTSC video
o AFA Video - 439.250 MHz AM (1 Watt output) - NTSC video
* Foxhunters:
o No repeater set yet - Airborne repeater will serve as emergency backup.
* HF Net:
o 7.235 MHz no net control set as of this writing

PURPOSE OF THE FLIGHT:

The United States Air Force Academy will be testing a prototype attitude sensing system using multiple GPS receivers. EOSS will be assisting with video, backup telemetry and backup GPS. EOSS will provide recovery services.

notes:

Automatic Position Reporting System (APRS):

* EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file. The Shuttle is not a TNC equipped packet station. It only reads data from various sensors and experiments and formats and transmits that data in AX.25. Therefore, beacons from other APRS stations will NOT be retransmitted (digi). So, inorder to minimize possible interference with hams in your area, we request you turn off the position beacons in APRS. Thanks!

ATV:

* The Amateur Video Signals from the payload may be picked up by a cable ready TV set on channel 58. However, you need to be very close to the balloon, and have a directional antenna to do this as cable receivers do not have much sensitivity (why should they?). If you don't have a cable ready set, try tuning DOWN from UHF channel 14. Some sets can receive the signal there too.

Who Can Hear It:

* Almost all our transmitters are on VHF or above frequencies. Therefore, you need to be line of site to the payload to hear/see it. Since the payload rises to an altitude of over 90,000 feet on most missions, reception is usually possible for folks in most of Kansas, most of Nebraska, most of Wyoming, extreme south eastern Idaho, eastern Utah, north eastern Arizona, most of New Mexico, northern Texas, and western Oklahoma. DO NOT BE DISCOURAGED by the apparent low power of our signals. I usually monitor the Beacon with an HT from the ground station throughout the flight. The signal is strong even at 130 miles and I only lose it when the balloon descends below my horizon.

Does anyone know the latest phone number for the Celestial BBS run by Dr. TS Kelso. The latest number I have is 205.409.9280 which doesn't seem to work anymore. I used to use his BBS to download NASA two-line orbital elements sets. Any suggestions where else on the net they might be found?

Thanks in advance.

2516. Substitute Astronaut Starts Training In Russia

Newsgroup: rec.radio.amateur.space
Date: 1995-11-30 00:00:00 UTC
From: wecare@teleport.com
Message-ID: <49l964$6ds@maureen.teleport.com>
Source record: 23528

From my local paper, reprinted here without permission.

MOSCOW - A NASA astronaut began training Monday for a mission aboard Russia's MIR Space Station, replacing another American who lost the job because he was too tall.

Michael Foale, 38, will have to cram the 18 month course into a year, the ITAR Tass news agency said. Russian space officials last month removed his predecessor, Scott Parazynski.

The 6-foot-2 Parazynski was 2 inches too tall to meet the height requirement for the tiny Soyuz capsules that ferry cosmanauts to the MIR. Although he was supposed to arrive at the MIR and return to Earth on an American space shuttle, in an emergency he would have to leave on a Soyuz.

NASA officials said they knew of the height requirement but hoped that a Soyuz could be modified for Parazynski, an option the Russians said was impossible.

- end -

2519. Colorado Balloon Launch Delay to December 9

Newsgroup: rec.radio.amateur.space
Date: 1995-12-01 00:00:00 UTC
From: au156@yfn.ysu.edu
Message-ID: <49mbgr$800@news.ysu.edu>
Source record: 23531

There has been a one week launch delay because of a technical glitch
involving the complex payload.

The date has been changed from Dec. 2 to 9, with a scrub date
of Dec. 10.

One more complete bulletin will be issued next week noting a
minor frequency change on one telemetry channel.

EOSS-25: CENTRAL COLORADO REPEATER/ATV BALLOON LAUNCH

Region: Central Colorado

Date/Time: December 9 / 8:00 AM MST, 15:00 UTC
Scrub Date: December 10

Location: Colorado Springs, US AIr Force Academy

HF Net: 7.235 Mhz SSB

For additional launch data and general Edge of Space Sciences (EOSS)

2521. Are you interested in Space Exploration?

Newsgroup: rec.radio.amateur.space
Date: 1995-12-01 00:00:00 UTC
From: jdl5945@tam2000.tamu.edu
Message-ID: <49lvmg$hf9@news.tamu.edu>
Source record: 23533

```
************************************************************
* ATTENTION: Are you truly intrested in the exploration *
* of space? Do you find yourself wondering *
* how to get off of this planet in a logical *
* and realistic manner? Then this message is *
* for you! *
************************************************************

On Tuesday, December 5th, 1995, at 5:30 pm CST (11:30 pm GMT), Space Now will
hold an organisational IRC session on channel #spacenow. A brief description
of Space Now follows. See you in IRCspace!

- Space Now -

Q: What the heck is Space Now?

A: We are a small group of students at Texas A&M University
deeply interested in the exploration of space. We have a life goal
to explore space, by whatever means neccessary. So, we're looking
for other people who are just as devoted to space exploration.
What we're initially interested in doing is setting up a planning
group to talk about the many problems that must be overcome to
explore space, on any scale. We eventually plan to start a
private corportion to actually explore space.

Q: How can *I* get involved, then?

A: At the moment, we're especially looking for interested
people in the Bryan/College Station area, to facilitate regular
meetings. However, this by no means precludes your participation
if you are not from this area. All are invited and welcomed at
our upcoming IRC session; it is during this that we plan to
consolidate our core group. In addition, keep watching this news
group for notices as further developments occur. We plan big
things.

Q: What can I do *now*?

A: For starters, spread the word! Feel free to distribute
this article among people who may be interested (in unedited form
only, please). Drop in on our IRC session; besides developing
a network among interested people, we'd very much like to find
people in the Bryan/College Station area and anyone with the time
and resources to help establish and administrate a quality web page.
Any other ways in which you can generate exitement can only help
our cause.
Also, keep an open mind! Explore *any* promising ideas
```

related to space travel, so that when our first big conference occurs (tentatively in the first half of 1996) you can contribute to a meaningful dialogue. We plan to acheive our goals by whatever means neccessary, and this is your opportunity to get in on the ground floor.

Q: Who do I contact?

Presently, we are limiting our contact availiability in order to avoid growing too fast and tripping up on our own feet. More specific data shall follow as our group grows, but the best means of contact at the moment is via our upcoming IRC session. Further bulletins will be posted to this newsgroup as they become availiable.

Thanks for reading this far! Once again, please meet with us on channel #spacenow in IRCspace at 5:30 pm CST on December fifth. See you then!

2522. SPARTAN PACKET RADIO EXPERIMENT (SPRE) in January!!

Newsgroup: rec.radio.amateur.space
Date: 1995-12-01 00:00:00 UTC

SPARTAN PACKET RADIO EXPERIMENT (SPRE)

General Information (long)

By: Ken McCaughey (N3FZX)
File: spre02pr.txt
Date: 29-Nov-95

The Spartan Packet Radio Experiment (SPRE) is an Amateur Radio (HAM radio) communications experiment. The primary mission is to test satellite tracking using amateur packet radio and a Global Positioning System (GPS). SPRE was developed and built by the University of Maryland Amateur Radio Association (UMARA) with assistance from NASA, volunteer engineers, and volunteer software professionals.

SPRE is one of four experiments on NASA's Spartan/OAST-Flyer spacecraft. The Spartan spacecraft is scheduled for launch on January 11, 1996 aboard the space shuttle Endeavour as part of mission STS-72. The spacecraft is a cube shaped, battery powered, retrievable satellite. Spartan will be deployed by the shuttle's robot arm and likewise retrieved after approximately 48 hours of free flight.

Mission Objectives:

* Promote amateur radio and amateur satellite communications.
* Test GPS and packet radio based tracking system using a Low Earth Orbit (LEO) satellite.
* Provide an educational tool to inspire elementary and high school students to pursue science and engineering.
* Provide a unique hands-on educational opportunity for college students.

SPRE is designed to relay ground station positions and transmit telemetry containing the GPS location of the spacecraft and housekeeping data. The GPS data is generated by another Spartan experiment.

Special software called APRtrak (tm) will be used at SPRE ground stations to plot the positions of stations and objects world-wide using SPRE transmissions. APRtrak uses full color maps and graphics with the capability to display detail maps of selected geographic regions. Amateur radio ground stations can transmit their locations to SPRE, and if heard, SPRE will relay GPS information back to Earth. All ground stations within range of SPRE will see the relayed stations plotted at the on the map at the correct geographic location. The APRtrak software will also decode and display SPRE housekeeping telemetry including temperatures, voltages, and system status. This software is freely available on the Internet for

installation on IBM compatible computers.

This technology has many applications in the amateur radio as well as the commercial worlds. Low cost Low Earth Orbit (LEO) satellites could be used to track storms, weather balloons, boats at sea, trucks, etc. Satellites could collect the location data from ground targets and download it to ground control stations. If the SPRE mission is successful, this capability may be incorporated into future amateur spacecraft, thus supporting the amateur's effort for technological improvement.

The operational aspects of SPRE will include amateur radio operators throughout the world. Elementary and High Schools are encouraged to enlist the aid of local amateur radio operators to set up ground stations and participate in the SPRE experiment. SPRE can be used as an educational tool in many classes including math, science, and geography.

SPRE can still be used as an educational tool even if a school is not in session during a fly-over. A simple amateur packet radio station can be configured to listen to the SPRE telemetry and record the data for later study.

Amateurs and schools who participate are encouraged to send the data they collect to the SPRE Project to help to piece together a composite picture of the mission. The final results will be made available to participating schools and the amateur radio community.

SPRE will use a ground control network, SPREnet, consisting of specially equipped amateur radio stations to distribute data via the Internet. These control stations will monitor the health and activity of SPRE.

In addition to the amateur radio experiment, the SPRE system will forward to Earth a sampling of real-time telemetry for two of OAST Flyer's experiments: REFLEX and GADACS. Spartan is equipped with on-board recorders to capture data from each of the experiments. Traditionally, an experimenter must wait several weeks to receive the mission data. SPRE provides a low cost, innovative solution giving experimenters the opportunity view a small sample of data during the mission while advancing amateur radio satellite technology.

The sample REFLEX data from the mass spectrometer will be used by the experimenters to provide feedback on how well their experiment is performing. SPRE will be providing GPS location and time information from the GADACS experiment. This information will provide some insight on the health of the GADACS GPS receivers as well as indicate the current location of the Spartan satellite. Using the APRtrak software described above, amateur radio stations and schools will be able to observe the track of the satellite as it passes overhead.

Data is transmitted on a downlink frequency of 145.55 MHz. The is the same frequency used by the MIR space station and the Shuttle Amateur Radio EXperiment (SAREX). The data format is completely printable ASCII characters and therefore is fully compatible with all amateur packet radio

equipment in common use today.

All of the hardware and software has been designed and constructed by students and volunteers. This low cost project has provided a great hands-on opportunity to gain experience in space communications. So far, several students have earned college credit for their work on SPRE. It has also helped some graduating students secure employment in the aerospace industry.

Information Summary

Mission: STS-72, Space Shuttle Endeavour (OV-105)

Launch: January 11, 1996 at 09:18 UTC (60 minute launch window)
Orbit: 28.45 Degrees

SPRE Deployment: 3 days 2 hours mission elapsed time
SPRE mission: Approximately 46 hours

Operating Mode: FM, AFSK 1200 baud packet radio
Frequencies: 145.550 MHz Simplex

Landing: January 20, 1996 at 04:54 UTC at KSC

WWW Home Page: http://w3eax.umd.edu
Anon. FTP site: w3eax.umd.edu /pub/spre directory

Ground Stations:

* Any amateur radio station or school with packet radio capability
* ARPtrak Software (available on the Internet)
- Runs on an IBM compatible PC
- Displays SPRE telemetry
- Unattended data collection capability
- Can replay satellite passes
* Simple packet radio station setup
- Licensed Amateur Radio Operator
- Terminal Node Controller (TNC)
- VHF Radio (amplifier recommended if transmitting to SPRE)
- VHF Antenna (beam recommended if transmitting to SPRE)
- PC Compatible Computer
- APRtrak Software Package4
- Satellite Tracking Software (Recommended)

To Participate:

Schools wishing to participate should contact the SPRE Project for more information and the APRtrak software. Send electronic mail (e-mail) to Ken McCaughey at kenneth@w3eax.umd.edu. Or send a self addressed stamped envelop and a 3.5 inch high density floppy disk to:

Attn: SPRE Project
Century Computing Inc.

8101 Sandy Spring Road
Laurel, MD 20707

For information on local amateur radio clubs, operators, and volunteer instructors please contact Peter Budnik from the Amateur Radio Relay League (ARRL). Send mail or e-mail to:

Peter Budnik
ARRL
225 Main Street
Newington, CT 06111

e-mail: pbudnik@arrl.org

2523. NORAD Two-Line Orbital Element Sets (TLE715)

Newsgroup: rec.radio.amateur.space
Date: 1995-12-01 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.817859229@dolphin>
Source record: 23535

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily) and some documentation and software are available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

As a service to the satellite user community, the most current of these elements are uploaded weekly to sci.space.news and rec.radio.amateur.space. This week's elements are provided below.

-> orbital elements sets. Any suggestions where else on the net they might
-> be found?

The Nasa 2 Line set is uploaded to this newsgroup weekly further you can
obtain it on demand at: http://www.amsat.org/amsat/keps/menu.html

I sold computers at a local dealership for about a year.
We also built custom computers as well. I was hired because
I had experience building computers from scratch. In March
of '95 we picked up the PB Line and man was I amazed. We
discovered that PB was putting very slow hard drives, very
slow video cards, and other parts that were not what I would
call "current". Our 486 DX2-66 computers would exceed the
performance of PB's Pentium systems up to 75 Mhz. We also
built 486 DX4 80 & 100 systems that blew the socks off PB's
Pentium 90 & 100 systems. What gives??? Their poor
supporting hardware (HDD, HDD controller, Video controller)
seems to bottleneck what is otherwise a fantastic processor.
As far as service was concerned, when someone had a problem,
we simply exchanged the computer for up to 1 year!! We were
the #1 PB dealer in the area so we could easily make PB eat
it or drop their line!

My suggestion to computer buyers is to build your own!! If
you don't know how, find someone that does. You can then
hand pick each piece that goes into it and get a good
performance machine. Another rule of thumb I use is to NEVER
buy a computer based on the software packaged with it. It is
only a sales gimmick!

Price wise custom built computers run a little higher but the
performance advantage is worth it in the future. And by
hand picking good, brand-name parts, you'll have less service
problems.

btw...we commonly referred to the PB as our best POS (Piece of
$hit) computers!

2526. Amsat mailing list

Newsgroup: rec.radio.amateur.space
Date: 1995-12-02 00:00:00 UTC
From: bmm1@freenet3.scri.fsu.edu
Message-ID: <49qa2t$2dq@freenet3.scri.fsu.edu>
Source record: 23538

I used to be on an Amsat mailing list. It had excelent content but I
didn't always have time to keep up with it so I unsubscribed. Is this
mailing list archived anywhere so that I can go back and read it as
time permits?

Thanks Bruce N4USH

>How do you use a kill file with Netscape?

I second the question. I'm not about ready to go out and spend money on
software I don't need to filter out posts way off subject of the newsgroup
I'm trying to read.

The volume on rec.amateur.space is three times what it used to be and most
of it is totally extraneous!

2529. AO-10 transponder noise

Newsgroup: rec.radio.amateur.space
Date: 1995-12-03 00:00:00 UTC
From: Danie Brynard <danie.brynard@pixie.co.za>
Message-ID: <49t43u$smi@hawk.pix.za>
Source record: 23541

This morning I thought I could hear the transponder noise from
AO-10 as it was flying over at a mere 5000 km. I use a linear pol.
yagi and the noise was coming and going at a rate of abt 0.5Hz.

When I listened outside the transponder BW I did not here anything.
Any other people who would like to comment on this effect ? What
is the phase noise contribution of AO-10 on the mode B transponder
and what is the average noise power coming from the 2m downlink ?

May be it is very high and that's why I could hear it with my
non-optimal antennas:-)

The APT Freqs are as follows.

Noaa 12& Noaa 14 137.5MHz
Okean 1-7(or 4) & Sich-1 137.4MHz
Meteor 3-5 & Meteor 2-21 137.85MHz

Ther are some SHF freqs for the Noaas, but I can't remember them off the
top of my head.

From: Douglas Braun <dbraun>
Message-ID: <49vdv0$cu2@news.jf.intel.com>
Source record: 23544

I'd bet you are hearing noise on the 70cm uplink being retransmitted.
If nobody was working the satellite, the transponder AGC should turn
up the gain way high. In fact, if you DIDN'T hear noise under those
conditions, it would be a problem...

>
> Any thoughts or considerations ??While you could TECHNICALLY do it just fine, it is considered poor
practice since FM puts an inordinate drain on the spacecraft's power systems. This stresses the batteries (reducing lifetime) and reduces available power for other users (unfriendly).

You may be able to modify your rig to operate cw, after a fashion. That's a better solution than running any other mode.

Good luck & 73,

RE: The Learning Machine Takes You Beyond Virtual Reality
http://Zygon.com

Amazing!! If you have a moment check out a new web site
http://Zygon.com. They have an incredible new multi-media
technology that uses a special digital headset that forces your
mind to learn. It blew my mind!!! Kinda felt like I was dreaming,
while learning foreign languages, and programming my subconscious
for success. And you can even read books with your eyes closed.
Pretty awesome. The company offers a free 30 day trial.
Check it out!!!

>>
>> I am curious if this is OK to do.

This is definitely NOT OK.

FM mode, compared to SSB, is not an efficient way to use limited battery power.
Secondly, SSB and CW cannot share the same transponder. There already is a small problem with inexperianced or rude operators using excessive power, sweeping carriers etc. A radio in FM mode cannot tell that a SSB or CW signal is present. How would someone keep from trashing other QSOs?
Third, the passband is only 40KHz wide, with the lower half for CW and the upper for SSB. A FM signal will hog far too much of the passband.

In conclusion, please don't try it. But your question was intelligent and should you obtain a SSB rig, you will be a welcome addition to the satellite community.

In the Packet radio you can find information on the satellites,
usually in the borad "WXSAT" or something like that.

2547. Need Satellite on 440 and 2300 MHz

Newsgroup: rec.radio.amateur.space
Date: 1995-12-05 00:00:00 UTC
From: jataylor@ll.mit.edu
Message-ID: <jataylor.205.000FBBF7@ll.mit.edu>
Source record: 23559

I need to find a satellite which transmits simultaneously on 440 MHz (+/- 10 MHz) and 2300 MHz (+/- 100 MHz). I have two antennas whose pointing and antenna patterns I want to compare at the same time, but I live in an area of the world where mountain tops and antenna ranges are rare. The downlink transmission format isn't very important, as long as carriers at both bands are present most of the time. Right-hand circular or linear polarization is preferred over LHCP.

Any useful info would be appreciated.

Netscape does not offer the ability to kill subjects, authors or domains.
I am a Macintosh user and I use a program called Newswatcher which is
Shareware and supports killing subjects, authors and domains forever or
for limited time periods.

Let your fingers do the walking and FTP some newsviewer programs, you PC
guys are always telling me how much more software is available for the PC
so go use it! :)

And now a special recap for those wishing to learn how to use a kill file:

1) Get a news viewer program that supports the ability to kill threads, etc.

2) Read instructions on how to use it.

3) Use it

Hope this has been of use to you.

Hi, I wonder if there is anyone out there who uses Mir to relay his APRS position reports....

I want to participate on the SPRE experiment this January, and I think using Mir as a digipeater could help us learn more about APRtrak so we really know what we're doing when SPRE flies....

Any comments??

There is a Mir pass over my location today at about 0350Z, and I'll give it a try then....

I've set up a listserv to administor a purchase of Garmin GPS
boards. We can buy the same boards they use in their handhelds
for as little as $120.

If you're interested, you can subscribe for more info.
Note, this doesn't commit you to anything.

send email to
maiser@humec.ksu.edu

in the body of the letter write
sub gps your@email.address

You'll be sent all the current info we have. If you have any
further questions (after you've read the info), let me know.
I'll send Garmin a fax with our other questions.

I hope to place the order within a week.

You can get the TLEs from Dr. Kelso's site. Listed as fsw-1. I am tracking it with STSPLUS and man is it eccentric. 500+ nm at highest decl. around 100 at south end. The NORAD number is 22870 I think.

Kelso's site is at <ftp://archive.afit.af.mil/pub/space/>

I don't think it is due to deorbit for a few weeks yet. I saw reference to it's expected demise but, can't remember when. The latest TLE Epoch is 95338 and changes every 3 days.

I do not know much about orbital mechanics but, assume the high risk areas for the 85 pound, shielded, core would be in the Southern latitudes where perihelion occurs.

>Gary Watts de N0OXV
>Kansas City Mo
>81 GL1100I

To which I must add: I agree with Gary whole-heartedly! Please do
not use an FM transmitter to access any satellites unless they are
for that mode. Even though the user may not intend it, there is
audio intelligence impressed on the carrier and a huge chunk of the
passband becomes unusable for the rest of us. Anyone who absolutely
must try working the satellites this way, please devise a way to key
the PTT without activating the microphone element. Also be aware that
many radios that use PLL's have a slow lock-up time, and these are
the reason we often get the "chirps" of which Gary spoke.

While we're on the subject of FM on the amateur satellites, I want
to hear from anyone who has monitored the Spanish speaking stations
that take out the upper half of RS-10's downlink with their FM trans-
missions. I notice it mostly on the passes around 2200 UTC, +/- a few
hours. I'd like to know if these are hams, or folks just using ham
rigs. Speculation has it that business or criminal types are using
the ham bands in Central/South America because they are more easily
obtained and cheaper than regular commercial radios. (By the way,
this is a good example of what havoc an FM radio can generate on a
SSB/CW oriented satellite.)

Source record: 23476

The latest version of WinOrbit (2.8) is now available on
ftp.seds.org, and ftp.amsat.org, and soon on oak.oakland.edu.
See below for detailed locations. A description of changes,
and an overview of the program, are also given below:

New Features in version 2.8
---
* Second satellite can now be displayed on each map.
* Mutual visibility prediction tables can now be printed for
pre-selected DX stations.
* Doppler and RF link calculations now displayed for uplink,
downlink, beacon, or transponder delta frequency.
* "AutoRun" feature added to schedule other programs for a
pass.
* Help displayed by F1 is now more "context-sensitive".

Some bugs were fixed, too.

Program Overview

WinOrbit is a program for computing artificial Earth-satellite
position and visibility, with the Amateur Radio satellite
operator in mind. It was written for the Microsoft Windows 3.1
operating system. WinOrbit is free (not shareware). The
latest version is 2.8.

The principal feature of the program is a series of tracking
windows, one per satellite, which display the current position of
the satellite and the observer on a simple world map, together
with information such as footprint, past ground track, bearing
(azimuth), distance, and elevation above the observer's horizon.
Sun position and terminator, user-selected DX locations and a
second satellite may also be displayed.

Additional features include:
* Simultaneous tracking of up to 20 satellites.
* Sun/Moon tracking built in.
* Real-time, pseudo-real-time, and manual calculation modes.
* "View from space" map presentation showing what a particular
satellite sees.
* Selectable tracking detail, including doppler shift, free-
space path loss, satellite and observer antenna pattern
effects, for a single satellite.
* Display sun position for eclipse determination, and other
observers for mutual visibility.
* "Show DX" for all stations within the satellite footprint, and

"what's up" for all satellites visible at observer QTH.
* 4 different orbital calculation algorithms (selectable).
* Tracking data (Keplerian element sets) read directly from
standard, off-the-air bulletins in two different formats (up
to 500 satellites). No pre-processing is needed, just
grab a bulletin file, headers and all. Reads AMSAT, NASA
or vector formats.
* Propagation of pre-launch keps and other element updates.
* Utility functions for modifying and comparing published element
sets, including post-launch updating of pre-launch elements,
and saving composite data files compiled from various
sources.
* Observer (QTH) data (latitude, longitude) may be imported from
a simple text database (up to 1000 locations). Entry by
grid-square or mouse-on-map is possible.
* Flexible entry of latitude, longitude, date and time.
* Printing of tables of tracking data (Ephemerides) in several
formats. Printing does not interrupt tracking. Output
may be directed to disk file or printer.
* Timeline and mutual visibility printouts.
* On-line help, including glossary and direct lookup of text
information about all Amateur satellites from the map
windows. All hamsats since Oscar I included.
* Standard Windows interface for all functions - no commands to
memorize. Both mouse and keyboard can be used for most
functions.
* DDE server interface to tracking-antenna hardware controllers.

This program is available via internet, by anonymous ftp from:
ftp.amsat.org /amsat/software/windows/tracking/winorb28.zip
oak.oakland.edu /pub3/hamradio/pc/satellite/winorb28.zip
ftp.seds.org /pub/software/pc/sat/winorb28.zip

The file VBRUN300.DLL is required (you may already have it - if not,
you can get it as described in the WinOrbit documentation).

2567. Predictions for Chinese Satellite Jianbing Available Now

Newsgroup: rec.radio.amateur.space
Date: 1995-12-07 00:00:00 UTC
From: Manfred Bester <manfred@ssl.berkeley.edu>
Message-ID: <4a7f1a$kid@agate.berkeley.edu>
Source record: 23479
Cross-posted to: sci.space.shuttle,sci.space.tech,rec.radio.amateur.space

The SatPasses web page now also provides predictions for observing the Chinese Satellite Jianbing that will re-enter the Earth's atmosphere in early 1996.

The SatPasses web page can be found at the following URL:

http://ssl.berkeley.edu/isi_www/satpasses.html

2569. WinOrbit 2.8 available

Newsgroup: rec.radio.amateur.space
Date: 1995-12-08 00:00:00 UTC
From: Carl Gregory <cgregory@uiuc.edu>
Message-ID: <4a7v9q$6ej@vixen.cso.uiuc.edu>
Source record: 23481

[Reposted due to my omission of a title the first time.]

The latest version of WinOrbit (2.8) is now available on
ftp.seds.org, and ftp.amsat.org, and soon on oak.oakland.edu.
See below for detailed locations. A description of changes,
and an overview of the program, are also given below:

New Features in version 2.8
---
* Second satellite can now be displayed on each map.
* Mutual visibility prediction tables can now be printed for
pre-selected DX stations.
* Doppler and RF link calculations now displayed for uplink,
downlink, beacon, or transponder delta frequency.
* "AutoRun" feature added to schedule other programs for a
pass.
* Help displayed by F1 is now more "context-sensitive".

Some bugs were fixed, too.

Program Overview

WinOrbit is a program for computing artificial Earth-satellite
position and visibility, with the Amateur Radio satellite
operator in mind. It was written for the Microsoft Windows 3.1
operating system. WinOrbit is free (not shareware). The
latest version is 2.8.

The principal feature of the program is a series of tracking
windows, one per satellite, which display the current position of
the satellite and the observer on a simple world map, together
with information such as footprint, past ground track, bearing
(azimuth), distance, and elevation above the observer's horizon.
Sun position and terminator, user-selected DX locations and a
second satellite may also be displayed.

Additional features include:
* Simultaneous tracking of up to 20 satellites.
* Sun/Moon tracking built in.
* Real-time, pseudo-real-time, and manual calculation modes.
* "View from space" map presentation showing what a particular
satellite sees.
* Selectable tracking detail, including doppler shift, free-
space path loss, satellite and observer antenna pattern
effects, for a single satellite.
* Display sun position for eclipse determination, and other

observers for mutual visibility.
* "Show DX" for all stations within the satellite footprint, and "what's up" for all satellites visible at observer QTH.
* 4 different orbital calculation algorithms (selectable).
* Tracking data (Keplerian element sets) read directly from standard, off-the-air bulletins in two different formats (up to 500 satellites). No pre-processing is needed, just grab a bulletin file, headers and all. Reads AMSAT, NASA or vector formats.
* Propagation of pre-launch keps and other element updates.
* Utility functions for modifying and comparing published element sets, including post-launch updating of pre-launch elements, and saving composite data files compiled from various sources.
* Observer (QTH) data (latitude, longitude) may be imported from a simple text database (up to 1000 locations). Entry by grid-square or mouse-on-map is possible.
* Flexible entry of latitude, longitude, date and time.
* Printing of tables of tracking data (Ephemerides) in several formats. Printing does not interrupt tracking. Output may be directed to disk file or printer.
* Timeline and mutual visibility printouts.
* On-line help, including glossary and direct lookup of text information about all Amateur satellites from the map windows. All hamsats since Oscar I included.
* Standard Windows interface for all functions - no commands to memorize. Both mouse and keyboard can be used for most functions.
* DDE server interface to tracking-antenna hardware controllers.

This program is available via internet, by anonymous ftp from:
ftp.amsat.org /amsat/software/windows/tracking/winorb28.zip
oak.oakland.edu /pub3/hamradio/pc/satellite/winorb28.zip
ftp.seds.org /pub/software/pc/sat/winorb28.zip

The file VBRUN300.DLL is required (you may already have it - if not, you can get it as described in the WinOrbit documentation).

2570. Re: Chinese Satellite to re-enter earths atmosphere

Source record: 23482

In article <4a735c$jgk@news3.cts.com> wallnerw@crash.cts.com (Bill Wallner) writes:

You can get the TLEs from Dr. Kelso's site. Listed as fsw-1. I am
tracking it with STSPLUS and man is it eccentric. 500+ nm at highest decl.
around 100 at south end. The NORAD number is 22870 I think.

Kelso's site is at <ftp://archive.afit.af.mil/pub/space/>

I don't think it is due to deorbit for a few weeks yet. I saw reference
to it's expected demise but, can't remember when. The latest TLE Epoch
is 95338 and changes every 3 days.

"By April 1" is what I recall. Likely closer to that date than the present
time.

I do not know much about orbital mechanics but, assume the high risk
areas for the 85 pound, shielded, core would be in the Southern latitudes
where perihelion occurs.

Not really, because by the time reentry occurs, the orbit will have
circularized. What's happening now is that at perigee, it's apogee is being
lowered due to the slowing effect of the atmosphere at that altitude. At
apogee, there's much less of a slowing effect, so its perigee isn't noticeably
dipping.

2572. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1995-12-08 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.818465379@dolphin>
Source record: 23484

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)
```

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293
2 11416 98.5105 69.3305 0012788 63.2828 296.9658 14.24899292346978

>in zero-G?

Under careful examination of the tape, prior to the UFO statement by Cady Coleman, the verbal exchange between Huntsville and Cady is business and professional. Huntsville then informs the shuttle that the switch to TVC-2 has been made. About 10 seconds later at 0604:40 (GMT), Cady Coleman replies: "We have an Unidentified Flying Object". It is in a more serious tone than her words prior. There is no detectable kidding around as Captain Oberg suggest.
The more reasonable scenario of what happened is this: After Cady says the words, "We have an Unidentified Flying Object", about 10 seconds later, a status screen pops up and on it is a listing of statuses among which is a TVC block. It is obvious that the UFO words should never have gotten out. The TVC-2 block should have occurred before the UFO words and then nobody would have been the wiser. Perhaps in Cady's excitement of seeing the UFO, she blurted out the UFO words in the clear forgetting to press the TVC block button.

2578. Re: OSCAR 21 ... ?

The satellite it was piggybacked on was also it's source of power. When the screwed up Russian Army and the group which commissioned the satellite disagreed on the operational costs, the Army simply shut the sucker off. Boom. No technical satellite, no ham satellite!

Is anyone knows what happened with Oscar 21
I operated it last year, it was working great.
I am a satellite operator, I am also a member of Amsat but
I just don't know what really hapened to that satellite.

Thank you for your help !

2580. NOAA-9

Newsgroup: rec.radio.amateur.space
Date: 1995-12-09 00:00:00 UTC
From: sylvestre <sylvestre@pandore.qc.ca>
Message-ID: <4acjvj$678@news.worldlinx.com>
Source record: 23492

I've been listening to NOAA-9 on 137.700 FM
since the past 2 days and it seem's to me like the bird
is pitching 9600 Bauds signal instead of the regular
standard APT wefax.

Anyone know more about it ?

Benoit

ve2vb@amsat.org

2581. Re: 9600 pacsats

Newsgroup: rec.radio.amateur.space
Date: 1995-12-09 00:00:00 UTC
From: sylvestre <sylvestre@pandore.qc.ca>
Message-ID: <4ackap$678@news.worldlinx.com>
Source record: 23493

Hello, name hr is Benoit VE2VB
I just started to play with the microsats KO-23 / KO-25 / UO-22
for the moment I am using the 9600 bauds sats.

I've been able to download files and messages on all of the above
satellites and it works great. I've also put some message on KO-23

I am using a DSP-2232 from AEA and my radio is a TS-790A from
Kenwood .. Antennas KLM 40-CX on UHF and KLM 22-C on VHF the
only thing I am missing now is the tracking interface.

A lot of people recommand the Kansas City Tracker / Tuner
I am still not sure because, I got some feedback about the
Track box too ! So I am just looking for the best interface
And want that Interface to track the frequency and do the doppler
correction.

Can you help ?

Thank you

VE2VB@AMSAT.ORG Benoit ve2vb

2582. Re: FM on the Satellites

Newsgroup: rec.radio.amateur.space

Yes Rob these stations are a great pain in the ass! I have heard them
and they appear to come from central America. It is just about as much
as a pain in the ass as the American stations that INSIST on broadcasting
ATV on the uplink which has been going on for years! We can thank our
"friend" W6ORG for putting out this garbage equipment as PC
electronics and is a ARRL tech advisor yet!!! Cliff W6HDO

2583. NASA ATS Satellite

Newsgroup: rec.radio.amateur.space
Date: 1995-12-09 00:00:00 UTC
From: rhyolite95@aol.com
Message-ID: <4abcls$dgi@newsbf02.news.aol.com>
Source record: 23495

A few years ago I spent a lot of time monitoring this satellite on 135.575, 135.600, 135.625 MHz. I am now getting my antenna's back up and listened again for a short while and heard a lot of European land mobile noise and IM coming up through the 149 MHz uplink.

Can any one tell me if this satellite is still in use and by whom? Is the interference a new phenomenon? What are the sources being heard on the uplink?

Rhyolite95

In article <DJ9quz.oDE@pe1chl.ampr.org>, rob@pe1chl.ampr.org says...

>I think the explanation at that time was they were taxi drivers
>in Spanish cities, and the authorities were not doing anything about it.
>
The stations you are hearing are probably unlicensed commercial users using the frequencies around 145.8. On a recent trip to the northern coast of Colombia I was trying to make a contact on a0-21 and listening to the downlink frequency. I then got into an argument with an unidentified station that uses this channel for his business. I told him that this was a satellite downlink and that he was causing interference. He then said that he has heard foreign language on this frequency, but never agreed to qsy. This is a very big problem. I scanned the 2 meter band while in Colombia and Venezuela and every single channel is in use during the day ,99% from unlicenced operators. The sad story is that nothing can be done. These countries have so many problems that enforcing the ham bands is not in their high priority list. Sending letters to the ministry of comunications of Colombia for example is a bad idea. A few years ago it was discovered that the driver of one of the commisioners would use some of the correspondence to clean the windshield of his car after a trip to the post office.

vvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvvv
FM'ing on 2.meter uplink frequency for RS-10
Will make you CW on downlink frequency.
It work ok

73 VE2VB @amsat.org
^^

it works ok if the microphone is disconnected so that the VCO is at a
stable frequency. If the radios mic gain is high enough, any sound it
picks up during transmission will fm the uplink, so it will sound like on
off keyeed FM, OOKFM and will probably interfere with other users.

2588. NAVSPASUR and PAVE PAWS DEEP SPACE RADARS

Newsgroup: rec.radio.amateur.space
Date: 1995-12-10 00:00:00 UTC
From: cliff@televar.com
Message-ID: <4ado6a$eth@golden.ncw.net>
Source record: 23500

I can not find a listing other than a reference to PAVE PAWS Deep Space Radar in "Spectrum Guide" OF PAVE PAWS being located somewhere between 420 and 450 MHZ. Does anyone know what frequency it is located on? Also I'm assuming it is a pulsed radar, is that correct?
Second question is NAVSPASUR Space Fence Radar. I understand from the listings that it is at 216.983MHZ. Does it operate 24hrs. a day? If so what am I looking for, pulsed radar again. If so how fast in comparison to the old russian woodpecker radar? Any help would be appreciated as specific's other than, "its there", are somewhat hard to come by from the Navy.

2589. FOR SALE: Kenpro KR-5400 Az-El Rotor

Newsgroup: rec.radio.amateur.space
Date: 1995-12-10 00:00:00 UTC
From: paulm@ultranet.com
Message-ID: <4af2oi$35p@caesar.ultra.net>
Source record: 23501

FOR SALE: Kenpro KR-5400 Azimuth-Elevation rotor system $150

The control box and rotors are very similar to the Yaesu G-5400 system. Why am I selling this for such a miniscule price? The controller is not working. If you are good at troubleshooting electronics and want to get onto the amateur satellites, this could be your winter project. Elevation rotor is only 18 months old. Azimuth rotor is older. You'll also need to add some fresh hardware to the rotor brackets (nuts and bolts).

UPS ground shipping included in price.

Email only to paulm@ultranet.com

2590. Re: NAVSPASUR and PAVE PAWS DEEP SPACE RADARS

Newsgroup: rec.radio.amateur.space
Date: 1995-12-10 00:00:00 UTC
From: mdf@vigard.mef.org

cliff@televar.com writes:

>Second question is NAVSPASUR Space Fence Radar.

the NAVSPASUR fence is a CW radar. an antenna array projects a thin
fan of RF (216.983MHz is correct) straight up, the "fence"
oriented east-west. multiple receiving sites listen for the echos as
satellites pass through the fence. interferometers for 3D DF (az/el), doppler
gives range rate. while an orbit can probably be completely determined
from on one fence crossing (since both position and velocity can be measured),
it's most likely going to be a poor one -- but thats that differential
correction is for.

the nice thing about this system is that if you are close enough to the
transmitters, you too can join in the fun. a SSB/CW receiver/transverter,
gain antenna are the minimum. use a satellite tracking program to get
estimates for a crossing time, aim antenna and listen. measurements of
actual crossing time vs. predicted can be used to correct element sets.

here is a list of transmitting sites that is at least 3 years old:

Longtitude	Latitude
Jordan Lake, AL	-86.264 32.659
Kickapoo Lake, TX	-98.7637 33.558
Gila River, AZ	-112.03 33.11

[notice how they are spread in longitude; a typical LEO object will
cross the combined fence over 2-3 successive orbits, assuming its inclination
exceeds 33 degrees or so].

: I'd like to know how to be able to get a QSL card from MIR.

Just send a QSL to Dave and a 'business' sized SASE envelope and
everything else will be just fine. You don't need a number for a QSL.

Radio Meteor Observation Bulletin No. 28 Dec 1995

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.41 Siedlce Poland 39 04h57(Sun05h57)-02h00(Sat03h00)
66.47 Viesintos Lithuania 12 05h00-22h00
66.50 Sofia Bulgaria 10 24hrs
66.56 Poznan Poland 56 04h57(Sun05h57)-02h00(Sat03h00)
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 06h00-22h00
(The transmitters mentioned in RMOB9510 and RMOB9509 are wrong, error by the undersigned. Thanks to Ton Schoenmaker for bringing this to our attention).
Antenna: crossed Yagi, 4 elements, astronomical azimuth 270 o (= East), elevation 27 o
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA, Bratislava
The receiver was calibrated with a Marconi TF2008 signal generator. Sensitivity: 5 muV (modulation frequency 1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB

Observing method: automated setup, 150 samples/second, 8 bit resolution. [Time and details of all individual meteor reflections are stored on file in the University of Ghent format (Prometeos), and are available for further analysis. Reduction software for DOS and Windows available].

Nov | UT

Notes:

. * good Leonid activity during early Nov 18.
The Leonid radiant rises at 22h30m, and sets at 14h UT.
Best forward scatter conditions for this setup between 7h and 8h UT.
Compare with last years's results in RMOB9411.
Radio-amateur results:
Pista (YU7EW, Hungary) reports "very-very strong and long reflections but
no adequate activity" on the morning of Nov 18.
John (PE1OGF@PI8ZAA.#NBO.NLD.EU, Netherlands) writes: "This year LEONIDS
was a GOOD shower much better than activity I heard on RANDOM
frequencies. So NEXT year don't think LEONIDS is a POOR shower it's
really a good one with long and strong reflections over long distances.
... this shower had a sharp maximum which was somewhere between 01-07 UTC
on 18/11/95".

Observer: Werfried Kuneth
Location: Villach, Austria (46 37' N, 13 53' E)
Frequency: 59.250 MHz, SSB mode
Transmitter location: 150 kW TV video carrier from Bucaresti, distance
950 km, east. Sometimes other TV video carriers are selected.
Antenna: dipole with reflector, direction east.
Frequency 1: 59.250 MHz, SSB mode, 150 kW TV video carrier
in Bucaresti, distance 950 km, east.
Beginning on Nov. 26:
Frequency 2: 48.246 Mhz, SSB mode, 100 kW TV video carrier
Location Germany, distance 550 km, northwest.
Dipole used alternating with frequency 1.
Receivers: Several, incl. homemade converter. AGC is enabled. No preamplifiers.
Observing method: the audio signal is fed into a real time FFT display
(FFTDSP program from AF9Y) on the PC where 640 channels of 2Hz width
are recorded and stored continuously. Every meteor reflection produces
a distinct whistle, which is recorded easily by the real time FFT
program.
From the saved .GIF files, reflections of at least 15 seconds are taken
to get the one hour intervals count starting at UT:

Codes used:

- no data available
| Transitters closed. So I didn't get the Alpha Monocerodits peak on Nov. 21.
d outstanding number of very short reflections, which would otherwise
not be included in the report.
! means that most of the reflections indicated here are in the range of
one minute or longer!!! (This is not usual and happens only at a showers
peak).
y means: strange appearance of the ionized trail. E.g. split trail
> available data don't cover the whole hour.

. for reference: a 15+ s duration count of 18 is about 40% of the 1995
radio Perseids peak.

. Local time conversion: one hour ahead of UT (06h00 UT is 07h00 local).

Anybody who wants to take a look at the Perseids, Orionids, or Leonids peak
is invited to take a look at the radio meteor spectrum .GIF files which are
available via anonymous ftp at:

karanet.uni-klu.ac.at/pub/forum/star-trek/meteor

Observer: James W. Riggs, Gr.
Location: West Point, CA (38o22'36" N, 120o33'03" W)
Frequency: 55.240 MHz , probably Salt Lake City and others
Receiver: Japan Radio NRD 525 with optional converter 34 to 60 MHz.
Antenna: 5 element Yagi
Observing method: Automated system with Apple Computer recording to disk pulse and tone of beat frequency with reflection.
Data of individual reflections and hourly counts are available.

Jim Riggs / via J. Van Wassenhove

Observer: Ton Schoenmaker
Location: Roden, Netherlands (6 degr 26' E, 53 degr 08' N)
Frequency: 66.89 MHz
Transmitter location: Krakow, Poland, 120 kW, distance 980 km
Antenna: Horizontal Yagi, 5 elements, geographical azimuth 110

degrees (ESE), elevation 15 degrees
Receiver: Homemade convertor 65-67 MHz to 28-30 MHz + Barlow-Wadley
0-30 MHz receiver; total sensitivity 0.3 uV for 20 dB S/N
with a bandwidth of 3 kHz
Observing method: Brown strip chart recorder, 18 inch/hour + occasional
listening.

Leonids and Alpha-Monocerotids 1995

Dead time corrected counts of reflections during one hour intervals
starting at:

| UT
Nov 1995 | 20h 21 22 23 00 01 02 03 04 05 06 07 08 09
---------+---
16/17 | 249 276 422 434 420 330 345 381 320 354 349 435
17/18 | 327 360 316 349 329 436 421 402 361 347 323 305
|
21/22 | 274 256 673 249 258
---------+---
Nov 1995 | 20h 21 22 23 00 01 02 03 04 05 06 07 08 09

More details of Alpha-Monocerotids with the number of dead time
corrected counts during five minute intervals starting at:

00h 01h 02h
Nov 1995 | 45 50 55 00 05 10 15 20 25 30 35 40 45 50 55 00 05 10 15
---------+---
21/22 | 32 21 20 30 39 54 75 87 78 108 72 47 30 28 25 26 22 19 17

Because of the large number of reflections, the recorder paper is difficult
to read during 1h15m - 1h40m. If I had been awake, I should have increased
the speed of the paper! Although corrected for dead time caused by long
echoes, the counts during that period are probably underestimated.
Graphically the maximum was determined as 1995 November 22.060, with an
uncertainty of 0.002 days. This corresponds with a solar longitude of
239.32 degrees (2000).

Paul Vauterin announces the availability of the summarized forward scatter
observations of the Astronomical Observatory, University of Ghent, at URL:

http://allserv.rug.ac.be/~pdegroot/meteor/mto_obs.html

It covers all of their observations from August 1994 up to now.
The results are presented in an original graphical way.

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 87.360 MHz
Receiver: narrow band FM, detected signal level >-122dBm.
Antenna: 2 element Yagi with 4dBd gain to SW.

Antenna Azimuth: 45 o
Computer: T-1000SE
Data sampling system: threshold crossing detection is fed in binary
form (1 bit) from the receiver to the computer.
Computer logs total hourly elapsed reflection time, number of
threshold crossings for the hour, the longest time the signal was
continuously above detection level for the hour.

Data stored in the Compact MS-Soft format. Software for viewing available
from FTP.FUNET.FI pub/ham/vhf-work/mssoft42.zip

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and has gradually been expanded.

Typically it contains: summaries of recent observations, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or unsubscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

2593. Re: FM on the Satellites

Newsgroup: rec.radio.amateur.space
Date: 1995-12-10 00:00:00 UTC
From: dreynold@rad.net.id
Message-ID: <4aeidd$p5g@news1.rad.net.id>
Source record: 23505

I have seen identical downlink problems in my overseas travel.
Dowlink interference by unlicensed commercial and non-ham
non-commercial operators in the ham 2M FM band. It's worse in S.
America due to equipment availability from Miami (in particular). Read
on...

I feel the problem is due to two factors:

1. Regulatory and enforcement in foreign countries... this is obvious.

2. Pricing policy of radio manufacturers... In S. America in
particular (elsewhere i'm sure it's the same). A person can buy and
hand-carry/ship a HAM transceiver at lower cost than a commercial
version. Almost always, the HAM version has more features (channels).
Until radio Marketing policy brings HAM prices in-line with commercial
prices; this situation will exist. However, radio manufacturers claim
the radios for commercial use are more expensive due to REGULATORY
(FCC) compliance. A potent argument...

Kickapoo is the big one, and is most often used by people with amateur
equipment.

One thing that has always puzzled me is why no other country has
built a system like NAVSPASUR; it's 1950s technology, cheap to build
and operate, and gives good results.

2595. Which Rig for 2m and 70 cm?

Newsgroup: rec.radio.amateur.space
Date: 1995-12-10 00:00:00 UTC
From: jrybak@mesa5.Mesa.Colorado.EDU
Message-ID: <4ag5mh$lgs@mesa5.mesa.colorado.edu>
Source record: 23507

I want to get a rig for working mode A on RS-10 and RS-15 but I also want to
I wan
be able to work mode B on the AMSAT Phase 3-D when it goes up. What 2m/70cm
rigs are recommended? My inclination is to get an ICOM 820-H. Can I do
better?

Thanks.

A friend of mine told me that he used his Dual band mobile to make use of a new Sat that's in orbit, and actually had a QSO. Can someone please send me information, such as uplink/downlink, PL encode/decode, and address for information and contributions? Email to this account would be appreciated. Tnx es 73!

In article <4abnn7$6v1@cloner2.ix.netcom.com>, sts48@ix.netcom.com(Donald Ratsch) says:
> Under careful examination of the tape, prior to the UFO statement by
>Cady Coleman, the verbal exchange between Huntsville and Cady is
>business and professional. Huntsville then informs the shuttle that the
>switch to TVC-2 has been made. About 10 seconds later at 0604:40 (GMT),
>Cady Coleman replies: "We have an Unidentified Flying Object". It is in
>a more serious tone than her words prior. There is no detectable
>kidding around as Captain Oberg suggest.

I have several comments regarding this thread.

1. I can't believe I am responding to this nonsense but I can't stand
it anymore!

> The more reasonable scenario of what happened is this: After Cady says
>the words, "We have an Unidentified Flying Object", about 10 seconds

2. a. Cady was in the spacelab module (reference to TVC-2 confirms that).
b. There are **NO WINDOWS** in the spacelab module.
c. Therefore, the UFO she saw (standard crew banter) was in the module.
d. Anybody should be able to follow that line of logic!

>later, a status screen pops up and on it is a listing of statuses among
>which is a TVC block. It is obvious that the UFO words should never

3. TVC-1 and TVC-2 are the two TeleVision Cameras in the module. The
switch from TVC-1 to TVC-2 was an informational message to Cady so
she would know which way to look so that the downlink video would
not be of her back.

>have gotten out. The TVC-2 block should have occurred before the UFO
>words and then nobody would have been the wiser. Perhaps in Cady's

4. The TVC's are video only! They have no effect on voice communications!

>excitement of seeing the UFO, she blurted out the UFO words in the
>clear forgetting to press the TVC block button.

5. What the heck is a TVC block button!!! Where did that come from!

I apologize for falling into the trap of these UFO posters but I just
couldn't stand it anymore!!!!!!!

Nope, there were at least these 2 sats that for a time provided
FM transponding: Oscar-21 and Oscar-27.
I have read of some "hitting" the old AO-21 system using a dual
band HT but I was NEVER able to hear myself or get a response
through it even when running 25 watts on UHF.
I was able to hear myself and complete a QSO via the Oscar-27
bird however by going through a 2 meter high power remote base
for the 2 meter uplink and listening with a scanner (IC-R7000)
to the UHF downlink.... the first and only time I tried!!
(about a year ago).

Hmmmm.... could we possibly mean Oscar 27 on the commerical bird, Eyesat ??? That was 2-m up/440 down on weekends when it was in the sun over N.America and AO-27 was operating as a crossband repeater (145.850/436.800/no PL). AO-27, which went up around the beginning of 1993(?), was put together by the folks at AMRAD (in Mclean, VA) and was to be used for modulation experiments among, I've sure, for other things. Programs could and have been uploaded to its CPU on the fly. The 2m/440 repeater mode was one of the applications. Does anyone know its status these days?

ARLS026 OSCAR 17 link fails

ZCZC AS06
QST de W1AW
Space Bulletin 026 ARLS026
From ARRL Headquarters
Newington, CT December 12, 1995
To all radio amateurs

SB SPACE ARL ARLS026
ARLS026 OSCAR 17 link fails

The DOVE-OSCAR 17 satellite 2-meter downlink failed December 3, and the AMSAT control team is not sure why. While it's not clear if the problem resulted from a computer crash aboard the spacecraft, the control team plans to try reloading the software to see if that fixes it. The satellite's S-band transmitter is on, and the permanent onboard backup software is working.

Jim White, WD0E, of AMSAT says reloading DOVE is a complex process that could take from two weeks to a month if all goes well and there are no hardware problems. White says reloading requires a lot of operational skill and some unique equipment configurations, plus more than one command station.

DOVE-OSCAR 17 is used for educational and research purposes.

Source record: 23420
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.space,sci.space.shuttle

Pictures of the Spartan 206 OAST-FLYER spacecraft which will carry the
Spartan Packet Radio Experiment (SPRE) in early Jan. 1996 are now online at:

http://sspp.gsfc.nasa.gov/sp206.html

SPRE is a 2m packet "easysat" which will be a test of the usefulness of
real-time downlinks of space-based GPS positions as well as using APRS (tm)
systems to digipeat terrestrial locations through LEO spacecraft.

The Spartan 206 spacecraft is a free-flier which is deployed from the
Space Shuttle payload bay during mission STS-72, and left on its own for about
46 hours. After that time, the Shuttle picks up the Spartan and returns
it to earth.

For more information on SPRE, go to WWW URL:

http://w3eax.umd.edu/spre.html

I'm looking for any information anyone might have about price or availability anywhere concerning a rather old model of Ten Tec radio. I read a 1985 magazine review about the Ten Tec 2510, which was a combination 440MHz SSB/CW transmitter and 2m->10m SSB/CW transverter intended for OSCAR communications.
I called Ten Tec today, and the gentleman I spoke with did not recognize the model. If anyone knows where I might find more information on this radio or if anyone has one they may be interested in selling, I would appreciate an e-mail.

Thanks in advance.

Hallo Satellite-Tracking-Fan's,

I bought the Satellite-Tracking-Programm STSORBITPLUS version Sept.95
Now the programm needs for the purpose of "feeding" the
2-Line-element or Kepler Dates for example : TLEnnn.TXT or
N2L-nnn.TXT .
Where can I get these dates from INTERNET ??
Can somebody give me the http or ftp adresses ??

Thanks for response.

Greetings Freddi

Wo kann man sich diese Daten aus dem INTERNET holen.
Erbitte http oder ftp Adresse.
Besten Dank f&#65533;r die Hilfe.

m.f.g. Freddi

What does it take to convince you UFO types that what you "hear" or "think" isn't the truth!!!!.... Ignore those Zeta Reticulan chips in your heads!

An astronaut, who has ACTUALLY FLOWN several Space Shuttle missions including a Spacelab mission, has just told you that there are no windows in the Spacelab module. And YOU know better.

I have personally been in several Spacelab ground trainers (STS-40/SLS-1 and STS-58/SLS-2) at JSC and can confirm to you that there weren't any in there either. Nada, zip, zilch.... When STS-1 had a problem with one of the payload bay doors closing, the crew had to use cameras looking out of the aft flight deck to see out.

Anyone else out there care to chime in ... (not that this is really worth anyone's time to debunk).

What does that have to do with anything?

>During spacelab missions (of which Cady was working diligently) A/G-2
> is reserved for the Spacelab and that is where the windows are.

No, the windows are on the Flight Deck. You seem to be remarkably
uninformed about the Space Shuttle, but I suppose that explains how
you can be perpetuating these ridiculous stories.

> This is what I have been told.

Obviously you were told wrong, and apparently you have not seen
fit to do even the most superficial of research into this matter.

> According to the audio people there at NASA, during the STS-73
> mission, most of the time they carried A/G-2 on NASA TV.

Again, what does that have to do with anything Ron said,
or any of the "nonsense" in your previous post??

One of my favorite sites is the NASA Spacelink. It can be reached
via WWW, gopher, FTP, or Telnet using the following address:
spacelink.msfc.nasa.gov
You need to download the Kep files and edit out everyting except
the object name and its two lines of element numbers and save it
as a file with and extention of ".txt" and save it in the same
directory as the STS program. Then start it and hit F2 to read
the new TLE data and select whatever object you want to view.
Spacelink is a good site especially during space shuttle missions
to get current Kep's. I hope this information is useful to you.

Bruce.

Rusty, AO-27 is alive and well. It is on during daylight hours 7 days a week now. Look for it after 11 AM and around 12:30 PM. Better yet use a tracking program with recent KEPS for the pass prediction.

I have worked several HTs who were using their rubber ducky antennas. There is too much competition for the frequency now for this to work very often. The high power stations tend to hog it.

Well Ronald, since Cady was in the space lab working, during the space lab missions as you know, the A/G-2 (Air-to-ground 2 channel) is utilized, her conversation was carried on the A/G-2 channel. During spacelab missions (of which Cady was working diligently) A/G-2 is reserved for the Spacelab and that is where the windows are. This is what I have been told. According to the audio people there at NASA, during the STS-73 mission, most of the time they carried A/G-2 on NASA TV.

Jim,
Yep operation on AO-21 got to be a big joke.
One channel.. MANY HAM's trying to access the bird at the same time.
A lot of the oscar class stations would get on that bird and
make it UNUSABLE for the other lower power stations
Talk about a pile up..
I never did hear any usefull exchange of information
just calls and locations.
I dont miss that bird at all

RS-10 <- This one is a lot more fun

Don:

Yes, you are right, I forgot. Mea culpa. Also, early Spacelab missions had an optical window - in fact (correct me space hardware trivia buffs) I do believe that NASA "borrowed" an optically-pure window that had been sitting in the Skylab flight spare at the National Air and Space Museum for use in - was it SL-1? There is a small air lock in the "roof" of Spacelab which can take one of these windows - I think.

These windows are only installed when there is a need for them i.e. to look out. Each flight risks scarring, etc so they don't just leave them installed. I do not recall seeing any of the windows in the aft cone of SLS-1 or SLS-2. There was gear stowed there as I recall.

To you UFO I-wanna-be-abductees:

When an astronaut tells you something like this, try and accept it as fact. There were no Spacelab windows installed on the mission in question. Period. Find another dead horse to beat (or cow to mutillate).

Hey - its winter up here - dry air and all that - try running around the house with your ET slippers on and scuff your feet on the carpet. Maybe a static discharge will fry that Zeta Reticulan behavior mod chip in your brainstem. Hey I watch X-files too and know all the tricks!

Spacelab can (optional carry one (as in 1) single window, a small
one in the aft end looking out towards the tail. I do not know if
73 had this window installed or not. The windows (multiple) are
in the orbiter itself. Six forward, two up, two back. Most of the
photos taken on Shuttle missions are from these 10 windows since they
are relatively large. (The Spacelab window seems much smaller to me.)

A/G-2 is indeed usually choosen as the "science" comm channel, while
A/G-1 is used for "orbiter" communications (eg communications between
Mission Control and shuttle crews regarding orbiter systems and functions).

I don't beleive though that Cady "saw a UFO" and somehow "slipped" this
out over the non-secret comm channels. There are no secret comm channels,
and knowing a fair amount about Shuttle flights, I know that most of
the time, the science types have their noses buried in their experiments.
She probably was making a joke, either about something floating
in the module, or maybe something cool happening in one of the
fluid chambers (unidentified floating object?).

A real, live astronaut! I'm honestly impressed! However, what's the
bet that a certain person's mailbox is going to be _stuffed_ with a load
of direct-sent email from all those indignant UFO nuts? You know, the
"...you're just a part of the conspiracy of lies...", etc., etc. rubbish.

Ah, well. We can always hope they'll be sensible for once. And not
bother.

I suspect that when we encounter UFOs (notice that I _don't_ reject
the possibility - it's just that I'm waiting for the real ones) we'll
know all about it...

I have two experiences, one observed only and one in which I
transmitted. The first was in March of 1985 (I'm not sure of the
exact day but I could probably dig out an old log book and find out).

It happened on 80 meters, in the DX window, around 3795. It was about
0700 GMT and a W6, a ZL and an EI were all working one another at the
same time! I could hear a delayed echo both on the W6 and the EI. I
could not on the ZL (this is perfectly normal, being practically the
same distances to me in VE1 on both paths anyway). If I'm not
mitsaken the W6 heard his own LDE, but I'm not sure about the others.

I was using a G5RV dipole and a Yeasu FRG-7700 receiver.

The other experience was on 40, where early one evening I could hear
my own CW signal. It must have been since 1989 because that's when I
got my new radio with full QSK. (the relays in the old FT-101E were
just not fast enough!). I may have logged that one too. I recall
that I tried it after overhearing hearing others talking about it
earlier that evening. (I usually don't operate full QSK so I must
have been prompted by something external, else I would never have
heard it independantly).

For that reception I would have been using a Sultronix Sloper (coiled
for 80, 40 and 20 - full length for 160 - vertically polaried - top
fed against the tower ground ballast) and a Kenwood TS-680s (a 140
modified for 6).

The first reception (1985) was definitely within a few days of Spring
Equinox. I'm quite sure the 1989 one was also around an equinox,
likely Spring too because of lower noise levels.

I hope this helps!

I may be the source of Don's post. Here is the e-mail I sent to
him. You be the judge of how this was meant to be taken.

>> begin insertion (oh baby) <<

Donald,

I noted on the sci.space.shuttle group tonight that you
didn't wait for a response but posted instead. Mr. Parise
responded to that post. In all probability, his analysis is
correct.

I have not been able to get in touch with Cady yet, however I
confirmed that she was in the Spacelab module at the time. As
Ron pointed out, there are no windows in Spacelab.

Also, her conversation was carried on the Air-to-ground 2 (we
call it A/G-2) channel. Folks who were up on the flight deck of
the orbiter would have been talking on A/G-1 (the orbiter systems
channel - during spacelab missions A/G-2 is reserved for the
Spacelab). That is where the windows are. The audio folks tell
me that during the 73 mission, most of the time we carried A/G-2
on Nasa TV. Also, it is not uncommom (just watch and listen to
NASA TV or the loops like I've done for a few years) for silence
to last for a long time. On orbit, as here on earth - too much
talking means the work isn't getting done.

TVC-2 is a reference to Television Camera 2 (located in the
aft end of the Spacelab unless moved - which is usually isn't).
The TVC block display you saw references the display block - that
is, the block of systems which are displayed on a computer screen
at a given time - not a block of the signal.

In all likelyhood, Cady was referring to errant floating
material in SL, or to a crewmember who had joined her in the
Spacelab. It is not uncommon for crewmembers to "raze" fellow
crewmates with comments such as "UFO". After all, they are
flying, so to speak.

It'd been nice if you had waited for an answer offline first
- in order to avoid blowing a minor A/G conversation into a "UFO"
debate on the newsgroups. It really doesn't look good for honest
people such as yourself who are probably working hard to find
evidence of an exteraterrestrial presence to quote such trivial
incidents. In fact, it hurts credibility.

But, hey, you got Ron to respond . . . .

Source record: 23442

Jim: There is a product review of the 820 in the March '95 QST. The reviewer said that its satellite functions appeared to have been added as an "afterthought". The rig did poorly when used with a TNC to compensate for doppler shift when accessing the 1200 baud birds. It doesn't appear to have any capability to add any extra bands to it.
I have used a Yaesu FT-736R for the analog satellites (RS-10, RS-15 and FO-20 - I can only get the low earth orbit satellites cuz of my limited antenna system), and for the 1200 baud digital satellites (AO-16 and LO-19). I have been quite pleased with its performance, and have heard the same from many other satellite ops. QST gave it a very good review (May 1990). Finally, it is at least competitively priced with the 820, and may even be cheaper.
By the way, I used to live in Grand Junction (lived about a block from the college for about 6 months). I miss the area sometimes!

WOW! I feel like I was running for the touchdown and six 300 lb. NASA guys pummeled me into the ground. Ok for now you guys have me convinced that there were no windows where Cady was at in the lab when the UFO words were said. But as Columbo would say "there are a few loose ends yet". I noticed that when the UFO words were said simultaneously to the status screen. There then lapsed 21 seconds and then the scene showed Cady in the lab doing her work. The question arises, where were the other six astronauts? Were some of them on the flight deck where there ARE windows. Did they see the UFO and relayed this information to Cady who broadcast it over the air? Or maybe that voice wasn't Cady at all. Maybe the Payload Commander, Kathryn Thornton broadcast those words? Was she on the flight deck seeing the UFO through the window? A good voice print analysis would settle that question. I remember in 1989 I recorded on a GSFC Ham radio band the words of what we thought was an astronaut saying the words, "We still have the alien spacecraft under observance" The tape of that voice was taken to a lab and compared to the voices of the astronauts on that mission and it did not match leading us to conclude that a ham broadcast a hoax on that frequency (147.450mh). So an analysis could tell us if the voice was Cady's or Kathy's.

>ufonuts think of next!

Ok Big Jim, lets talk windows. I suggested on the last thread that since no one else could be seen in the lab except Cady after the UFO statement, that there was the possibility that Kathy Thornton could have been on the flight deck looking at the UFO through the windows at the flight deck and transmitted those words. Are you now saying that there are no windows on the flight deck? Everybody else says there are and if they are, then Kathy could have been the one who made the UFO statement. Even Cady in the lab wouldn't need a window to see the UFO, she could have utilized the cameras much like the STS-1 utilized the cameras to see out when they had the problem with one of the payload bay doors closing.

Except for in the past during the handful of DoD
missions, they have no "classified communications".

It seems that you're seriously trying to say that you
are totally ignorant about Shuttle communications.

2638. help with KPC9612 and PB/PG

Newsgroup: rec.radio.amateur.space
Date: 1995-12-15 00:00:00 UTC
From: stockmand@aol.com
Message-ID: <4arrlc$ibo@newsbf02.news.aol.com>
Source record: 23450

Greetings! I am having some difficulty getting my KPC9612 TNC/modem to work
correctly with PB/PG. The main problem is the TNC transmits on 1200 baud when
in KISS mode from PB. I talked to Kantronics and they suggested a fix. The one
problem is I live in Ghana, West Africa, but am currently visiting the U.S. for a few
weeks so I cannot check their suggestion out. Because I am so isolated in Ghana,
it may take months for me to get further information if the Kantronics suggestion
does not work. Therefore, I want to get the settings that others use when working
with the KPC9612 and PB/PG. This may save me months of headaches.

On a related note, I just ordered WISP from AMSAT. If possible can someone who
uses WISP and the KPC9612 send me their configuration files. It sounds like
WISP is much nicer to use than PB/PG so I hope to upgrade, but do not want to
run into the same problem I did with PB/PG once I return to the bush.

Thanks in advance for any help.

Station
Yaesu FT736R, G5400B
KPC9612 TNC/Modem
Ambra 486/25 subnotebook computer running OS/2-WARP, DOS 6, WINDOZE3.1
SATTRAK IV TRAKBOX
KLM 2m and 70 cm circ polarized antennas

Sure there is a secret channel Smiley. What about after the STS-48 footage was bagged by me and all the controversy that followed it and after that in 1992 the Transponder 5 on Satellite F2R was encrypted for downlinking secure and private communications. The SUPPOSED reason for the encryption was to carry private medical information from the astronauts. But they could transmit UFO information as well and nobody would be the wiser. Any comments?

2644. Suggestions for preamp and AO-10/AO-13

Newsgroup: rec.radio.amateur.space
Date: 1995-12-15 00:00:00 UTC
From: stockmand@aol.com
Message-ID: <4arrn1$ibs@newsbf02.news.aol.com>
Source record: 23456

Greetings! I need some suggestions regarding a preamp and working AO-10 and
AO-13. Does anyone know of an affordable preamp I can use that will allow
automatic passthrough during transmit? I am mainly interested in my station being
able to work the 9600 birds, but SSB on AO-10 and AO-13 is fun, so if it is not too
difficult to get a preamp into my current setup and it does not upset my digital work,
I will add a preamp. I have one 2m antenna and one 70cm antenna. Is it possible to
just add a preamp without adding another antenna and another coax cable? Can
someone suggest a specific model of preamp? Thanks in advance.

2645. Help! Need SATGATE to internet gateway!

Newsgroup: rec.radio.amateur.space
Date: 1995-12-15 00:00:00 UTC
From: stockmand@aol.com
Message-ID: <4arroh$ic7@newsbf02.news.aol.com>
Source record: 23457

Greetings! I live in a rural village in Ghana, West Africa. The nearest mail box or
telephone are a good two hours journey away when it is not raining. I am setting
up a station to work the 9600 birds with the main intent being to pass personal
messages to family and friends in the U.S. None of the people I want to contact
are hams. Most of them have access to the internet though. Therefore, I am
looking for a gateway between a SATGATE and the internet. If no SATGATE
currently serves as a gateway to the internet, does anyone know of a terrestrial
packet station that is near a SATGATE that is an internet gateway? Any and all
help is greatly appreciated. Thanks in advance.

You're right: I give up. NASA was doing a joint medical mission with the Zeta Reticulans. They were so embarassed that they didn't want anyone to know. So they encrypted everything and disguised it as commercial TV signal and beemed it back viaTransponder 5 on Satellite F2R to YOUR CABLE SYSTEM. Your ZR chip decoded it as being as an Oprah show on abductee amputees who are absentee fathers. Sorry. Guess you weren't watching that day.

>But they could transmit UFO information as well and nobody

Hmm... you learn something everyday. I thought for certain that the
University of Las Vegas would require Mark Hines to take several semesters
of encrypted communications, security procedure, and radio operations in
order to qualify for a Master's Degree in English Literature ....

Actually, you need a special Zeta Reticulan decoder chip implanted in your brain to receive these signals. OF COURSE we (non-implantees) aren't aware of them!

Owing to the less-than-desirable receving characteristics of the human skull, these chips do have a bit of a problem distinguishing signal from noise - hence these bizzare postings of late from Nevada.

Upgrades are due soon. Be on the lookout for ZR/ hybrid longhorn's with extra long horns to get better reception.

Archive-name: radio/personal-intro
Revision: 2.1 1994/11/01 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October 1994 to add the discussion of non-Usenet mailing lists and streamline most of the history discussion, and to change the moderator information for rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>These windows are only installed when there is a need for them i.e. to
>look out. Each flight risks scarring, etc so they don't just leave them
>installed. I do not recall seeing any of the windows in the aft cone of
>SLS-1 or SLS-2. There was gear stowed there as I recall.

Why am I foolish enough to keep this thread running?

For the STS-9 Spacelab 1 and STS-51-B Spacelab 3 missions the optical
window was carried in the Spacelab long modle in the overhead window for
the scientific airlock. In both cases it was carried to support the Very
Wide Field Camera experiment. And yes, it was a backup from the Skylab
program.

Some Spacelab long module missions have a small window in the aft cone.
You can see the window quite clearly in the IMAX film "Destiny in Space"
where Bill Readdy calls Canadian payload specialist Roberta "Bobby"
Bondar over to the window as they pass over Canada during the STS-42
IML-1 mission. For the SLS-1 mission (STS-40) Jim Bagian was actually in
the module while the shuttle's cargo bay doors were closed, to watch the
door closing to make sure it didn't snag on the shuttle's insulating
blankets (a spacewalk was briefly discussed to tuck in the blankets but
deemed unnecessary).

The STS-73 United States Microgravity Laboratory-2 (USML-2) mission in question as far as I know did not have the observation window in the aft end cone installed, and certainly did not have the optical window installed.

Check out the onboard JSC photo STS073-105-011 which shows Cady Coleman in the Spacelab module working on the glovebox experiment - the aft end cone is directly behind her. Or the photo STS73-103-019 which shows a wider view of the module with Cady and Fred Leslie in the module with the end cone in the background.

Like I said before - when this thread was young. I've spent a little time with Cady and she's got a good sense of humor. And I know her voice and Kathy Thornton's voice well nough to tell them apart. While it's certainly not absolutely 100% completely impossible that Cady saw a flying saucer, called it a UFO, and is part of this great conspirary to keep everything secret (although for the life of me I haven't the faintest idea what she'd gain by being part of that conspirary) it's much more reasonable to believe that she was just making a simple little joke.

Like later in the mission when commander Ken Bowersox was asked whether or not he had ever seen a space alien in space and he replied - on the voice to ground loop - that the only space alien he'd ever seen in space was fellow astronaut Story Musgrave.

(of course if Story really is a space alien then Ken and I just ruined his cover. Sorry 'bout that Story).

>footage was bagged by me and all the controversy that followed it and

By "controversy", you mean the ridiculous nonsense where certain
Shuttle-ignorant members the UFO lunatic fringe started inventing
wild stories about the ice particles being hit by an RCS plume.

>after that in 1992 the Transponder 5 on Satellite F2R was encrypted for
>downlinking secure and private communications.
Some time after that.

> The SUPPOSED reason for the encryption was to carry private medical
> information from the astronauts.

More accurately, the reason was so they could have private
medical video conferences with their doctors on the ground.

>But they could transmit UFO information as well and nobody
>would be the wiser. Any comments?

Yea, you're nuts! :> Everything you are saying is ridiculous.
NASA is using a *commercial* video encoder, the same type used
by ABC for example. That provides just enough security to
protect the modesty of any astronaut who may need to show
some part of their body to a doctor on the ground...

But when you start inventing wild stories about hiding "top secret
UFO space alien video", it (not surprisingly) becomes ludicrous.
Besdies, if the government ever wanted to send video of that sort,
first of all they would use the best military encryption systems
the NSA had to offer, and second they would not uplink it for all
to see on a commercial broadcast satellite.

As usual, your fantasies have no foundation in logic or reality,
and have everything to do with your complete ignorance of the
subject matter involved.

2655. Need Skeds for Sat WAS

Hello from Reno Nevada de Tim - NC7K...

Recently I became QRV on AO10 and AO13 chasing Grids,
States, and countries. After 1 month I'm having trouble
finding the last states for Sat WAS. Is anyone QRV from,
MT, ND, SD, NE, CO, WY, KS, OK, AR, IA, MN, AL, SC,
NC, NH. RI, and ME ?

If so I'd like to set up some skeds and get it done.

Thanks and Happy Holidays from DM09ep...

Tim - NC7K... sk

Is ATS-3 still alive?? I have tapes from a few years ago of members of the Bahai religion using the sat for roundtable discussions. I also monitored quite a few telephone calls from McMurdo (South Pole). As I have recently moved to a new QTH my antenna system is not what it was. I just put up a cushcraft AOP-1 and pointed to about where i thought ATS-3 was and listened in the 135.550-135.650 MHz passband. What I heard sounded like a lot of european land mobile traffic complete with multitone preambles. What is going on with the bird is it stable? Is anyone using it?? Please reply rhyolite95@aol.com

So does WinOrbit, and many others. However, you must know the present attitude of the satellite, which is occasionally published here and elsewhere in the newsgroups. Herewith a repost of the last bulletin:

o

SB AMSAT @ WW $RUH951201
AO-13 Schedules 1996

Attitude Schedule

The planned attitude schedule for Oscar 13 during 1996 is:

Date [Mon] Alon/Alat Weeks

1996 Jan 01 220/0 13
1996 Apr 01 180/0 10
1996 Jun 10 220/0 t.b.a.

The session beginning 1996 June 10 will also last for about 3 months. After
that, 1996 September, perigee height will be 170 km and re-entry effects will
already be noticeable. This will be an interesting time, and the command team
welcomes suggestions which we could implement to make use of this unique
opportunity to observe an amateur spacecraft at re-entry.

Full details of re-entry, around 1996 Dec 05-19, can be found in:

- Proceedings of the 12th annual Amsat Space Symposium, Orlando, Florida,
USA, 1994. 4 pages.
- Oscar News (UK) 1994 Oct No. 109 p 16-20
- Jamsat Newsletter (JA) No. 166, 1995 March 25. p1-4
- Amsat-DL Journal (D), Jg. 22, No. 1, Mar/May 1995.
- Amsat OZ Journal (OZ) No. 37, 1995 May
- The Amsat Journal (USA) Vol 18 No.3, May/June 1995.

The article and regularly updated program listing is available via the Internet
by anonymous FTP:

Site: ftp.amsat.org
File: /amsat/articles/g3ruh/a114.zip (Article)
File: /amsat/satinfo/ao13/decaykep.zip (Decay keplerian elements)

Mode Schedule

M QST ** AO-13 TRANSPONDER SCHEDULE ** 1995 Dec 02 - 1996 Jan 01

Space Bulletin 027 ARLS027
From ARRL Headquarters
Newington, CT December 19, 1995
To all radio amateurs

SB SPACE ARL ARLS027
ARLS027 Mir seasons greetings

German astronaut Thomas Reiter, DF4TR/DP0MIR, will send seasons greetings to all hams and swls from aboard the Mir space station. Reiter will remain aboard Mir until February 1996. Reiter will record messages using a digital voice recorder constructed by Thomas Kieselbach, DL2MDE. The device can store up to eight minutes of messages.

Reiter also will transmit live from DP0MIR as time permits. The main transmission frequency is 145.800 MHz.

Because of some missing parts, including a diplexer for the dual-band antenna, 70-centimeter activity from Mir has been delayed. These parts and a 9600-baud TNC are on their way to Mir now. Frequencies to be used are 437.925 MHz for voice and 437.975 MHz for packet, simplex mode.

In article <4b0uni$jsj@hawk.pix.za>, danie.brynard@pixie.co.za says...
>
>Is it possible to know what the antenna orientation of AO-13 is ?
>Will some PC program give one this info ?
>
>Danie zs6awk
>
>~~~~~~

Danie, in addition to the programs and schedules mentioned above, all
you need to do is enter the alat and alon for the current date into the
tracking program. Instantrack will then tell you the pointing angle of
the sat antenna during the pass.

Enjoy,

Ken K5MBV mbv@ti.com

So does WinOrbit, and many others. However, you must know the present
attitude of the satellite, which is occasionally published here and
elsewhere in the newsgroups. Herewith a repost of the last bulletin:

o

SB AMSAT @ WW $RUH951201
AO-13 Schedules 1996

Attitude Schedule

The planned attitude schedule for Oscar 13 during 1996 is:

```
Date [Mon] Alon/Alat Weeks
--------------------------------
1996 Jan 01 220/0 13
1996 Apr 01 180/0 10
1996 Jun 10 220/0 t.b.a.
--------------------------------
```

The session beginning 1996 June 10 will also last for about 3 months. After
that, 1996 September, perigee height will be 170 km and re-entry effects will
already be noticeable. This will be an interesting time, and the command team
welcomes suggestions which we could implement to make use of this unique
opportunity to observe an amateur spacecraft at re-entry.

Full details of re-entry, around 1996 Dec 05-19, can be found in:

- Proceedings of the 12th annual Amsat Space Symposium, Orlando, Florida,
USA, 1994. 4 pages.
- Oscar News (UK) 1994 Oct No. 109 p 16-20
- Jamsat Newsletter (JA) No. 166, 1995 March 25. p1-4
- Amsat-DL Journal (D), Jg. 22, No. 1, Mar/May 1995.
- Amsat OZ Journal (OZ) No. 37, 1995 May
- The Amsat Journal (USA) Vol 18 No.3, May/June 1995.

The article and regularly updated program listing is available via the Internet
by anonymous FTP:

Site: ftp.amsat.org
File: /amsat/articles/g3ruh/a114.zip (Article)
File: /amsat/satinfo/ao13/decaykep.zip (Decay keplerian elements)

Mode Schedule

```

You should get a subscription to Satellite Times magazine. They have all the frequencies you would ever want for the satellite hobby. Give Grove Enterprises a call at (704) 837-9200 to see about getting a subscription. I'll see about getting a small sample list together for you.

From: jgrimes@mail.bcpl.lib.md.us
Message-ID: <DJwAGw.84G@abs.net>
Source record: 23392

Greetings:

I would like to know the tranponder bandwidth for P3D. I spoke with Frank Baurer and Pat Kilroy at the Goddard ARC banquet, they weren't sure but Pat thought it was 44 Khz. minimun. I checked the AMSAT web site and I could not find the info there. So if anyone out here has the info, I would sure appreciate your posting it. Thanks in advance.

Date: 1995-12-20 00:00:00 UTC
From: c002@Lehigh.EDU
Message-ID: <4b9ds9$1s0t@ns3-1.CC.Lehigh.EDU>
Source record: 23393

Hello, i thought of a good idea and alot cheaper.
but will it work?
I have thought of mounting 2 radio shack <g> rotors, one for ELE and other as
AZM. kinnda like this

```
------OOO--|---XXX
|
)0(
)0(
|
|
```

the --'s being poles and OOO's being the rotors and XXX being a counter weight
now, will the rotors me able to handle turning 2, 11 element 2m beams or there
abouts with out breaking? heck, will this idea work at ALL? i did get this
idea from an old weather sat. handbook. if this works, i will save 400 or
more on rotor costs.
also, is there a program to contol a radio shak rotor via computer <MS
windoze, or xwindows>??

thanks...if you don't understand something, tell me, i'll try to clear it up

>
Hi Bernie! I am a regular on the 9600 satellites. I use a YAESU FT-736R, an
AEA DSP-1232 TNC, and I get excellent. But I need to say more. The FT-736R
came without receiving and transmitting 9600 baud capability. So I send it
to the YAESU factory, and they converted it for free. Maybe it was free
because it was under warranty. To continue, I have a YAESU G-5400B rotator
and a Gateway 4DX2-66V computer and WISP (software for tracking
communicating with the birds). I have it set up so that it tracks
automatically without my attention. So typically, it activates itself as
much as eight times for one bird in one 24-hour period. 73 de Tom

Rick,

ATS-3 is in geostationary orbit at 106.5 degrees west longitude. It is still used by several different agencies. You can find its downlink transmissions between 135.555-135.650 MHz. I recently received the following intercept from the ATS-3 satellite:

135.575 MHz ATS-3 transmitting voice communications between South Pole and Florida, 0100-0300 UTC, NFM. Individuals were talking about a "sun rise party" at the pole. First time they have seen the sun since winter set in.

<snip>

David,

Sure, it'll work, as long as you don't exceed the load ratings for the rotors.

Lots of us got our start with Alliance U-100 rotators, mounting them sideways in order for them to be used as elevation rotors. Worked like a charm.

Fabricate a mounting plate so that the boom goes up through the first rotator (the azimuth rotator) and the plate mounts above that... then mount the second rotator to the plate, pass the antenna boom through the second rotator (the elevation rotor), and make sure the weights on either side of the antenna boom are approximately equal.

Bernie,

All the 9600 baud birds are LEOs and don't need a lot of signal. Many people use rather simple antenna systems for 9600 with reasonable success. I am currently setting up a mobile demo station with two egg beater turnstiles and a pre-amp on the 440 side. I expect to be able to get most passes over 20 degrees with this setup. Another project in the hopper is to use a mobile radio scanning over a very short frequency range as a receiver. This should take care of the doppler without a computer. You don't need a multi kilobuck station that just makes it easier.

73 Happy Holidays Jerry

Yes. The A&A wefax board will work with JVFAX 7.0. I was never able to
get it to work the way the JVFAX suggested. I used the 5 input(status)
line to the printer port. I do not have the data wiht me and this
university will be shut down for the next week.(we get back on jan2)
The only problem wiht using the status inputs is that you must invert
one of them, the highest binary number. I will send you the full scoop
on the 2nd but if you are in a hurry(and who isn't?) just pull your spec
sheet out for the printer port, make a cable to bring out the 5 status
lines, (and a ground). I used 5 spst mini toggle swithes and 5 1 k pull
up resistors(to a +5v source). Wire up each lead to the pull up and wire
the switchs so that you can force that input lo. Run jvfax and
look at the "tune indicator"(after setting up jvfax to look at the right
printer address you want the input not the output). As you open and
close switches you will see the "inidcator" move. It took me about
30 minutes to map out what lead did what. It took another night of
thinking to realize that on line is inverted inside the printer card.
I use on section of a ttl ls hex inverter to drive that line. I also
had to bypass the A&A output ic and drive the port (and the single
inverter) wiht the direct out put of the ADC.
This will give you 32 shades of grey.(2^5=32). I have found a "real IBM"
printer card and think I have figuered out how to get a full 8Bits of
input. IF this works I will post the results here, and Email the
directions to you. I have a sams photofact diagram of the "IBM" card.
You could also use basic and write a program to look at the printer
input port and note the numbers returned as the program loops and
you change the switches.
I sure wish that I had ssen this yesterday, as I would have been able

to bring in the data that you need. Hang in their, if I could decipher this, anyone can. Just don't give up. 73 ran an artical several years ago that used the printer port for i/o control. You might try to scrounge that artical up, it gives all three common printer port addresses and shows how the ouput and input ports can be written to and read.
Good Luck. I hope this has not rambled to much and that you find the information usefull.

Of course the best setup would be some sort of AZ/EL array...but
not many of us have that, especally for an HF downlink. I have
worked RS-10, RS-15, MIR, and several Shuttle missions using an
eleven element beam for 2meters and a two element beam for HF,
both mounted on the same mast and up only 25 ft. My point being
that it can be done with a modist station. I have noticed many
times on both the sats and shuttle that the apparent orentation
of their antennas makes a BIG difference and I have lost them
after only half the pass many times. So, if you can use beam
antennas and have access to a sat. tracking program, that is the
best way to go...but I have heard the RS birds on my dipole ok.
Just stay with it and keep trying...good luck OM.

Don't know what type of equipment either. I just connected to r0mir-1 about 10 min ago. I have read that the two voice freqs of 145.800 and 145.200 are simplex.

>Watts using FM narrow mode?

No. The packet satellites that you can "work" use either 1200 bps PSK
(for which you need an SSB transceiver) or 9600 bps FSK.

The exception is Dove, which transmits 1200 bps AFSK telemetry on 145.825.
However, that is receive-only and gets boring pretty quickly...

I just purchased an MFJ-1270C TNC. It has HF weather FAX
capability, but the user manual says virtually nothing about how
to use this feature. Does anybody know how to command the unit
for WEFAX reception and the tuning offset to use with my HF
receiver?

Well here I am back at work 8 days early(wrapping presents for the Famimly
and I know they can not find me here....
Ok there are 3 main (semi-standard) printer addresses..

LPT1/2 LPT1 LPT2/3
DATA BYTE 378(888)3BC(956)278(632)
STATUS 379(889)3BD(957)279(633)
OUTPUT 37A(890)3B3(958)27A(634)
FIRST IS HEX IN()DECIMAL
printer connector
11=b7(inverted)
10=b6
12=b5
13=b4
15=b3
b=bit number ,b3 is the lowest(lsb) and b7 is the highest(msb)
bits 0,1,2 are locked hi internaly(thats why I needed a real IBM card,
I am going to cut traces etc)
I also have a problem in that the adc0804(adc) does not always get
reset on power up. I added a switch to pull pin 1 to +5v.
feed the output of the adc to the printer port..
adc 18>15
17>13
16>12
15>10
16>inverter>11
go to configuration and set to 5bits parallel port,my port (lpt1)is
3bd(957), you may hve to try all three status ports.

Good luck and I hope this helps.
Merry Christmas and a happy new year.
If this doesn't work go wiht the simple 74q comparator and use the
exar 2206(?) vco to drive it. Works fairly well, check out his diagrams
if this last part doesn't make any sense.
later
Terry

When you connect to R0MIR (via packet) your connecting to the keyboard
for a live QSO. After 2100utc no one is at the radio station. You'll get a
hello type message. When you connect to R0MIR-1 your connected to the
PBBS. The PBBS can only accept 1 connect at a time. The keyboard can
accept 7 at a time. You'll know when you connect to either port. Just
watch you screen.In the U.S. there's a NEW Mir QSL card manager:

N6JLH
Dave Larsen
P.O.Box 1501
Pine Grove, Calif. 95665

The cosmonauts DO use voice mode but not that often. Tom Reiter's call
is DP0MIR. Listen BEFORE you call in either mode to see what mode they are
in first!

Good Luck!

Tom

2718. MIR Christmas Greetings audio files

Newsgroup: rec.radio.amateur.space
Date: 1995-12-26 00:00:00 UTC
From: wday@dfw.net
Message-ID: <wday-2612952243450001@fw58.dfw.net>
Source record: 23330

Two files containing a 1:08 recording of German astronaut Thomas Reiter,
DF4TR/DP0MIR, and his Christmas greetings from the Russian MIR spacecraft,
have been uploaded to CompuServe's HamNet Forum, and AMSAT's ftp site.
The two files are available in AIFF-C format (approx .5 meg in size) or
WAV format (approx 1.6 megabytes of data) [note: the differences is the
3:1 compression of the AIFF-C format!].

On CompuServe, the files are MIR.AIF and MIR.WAV and are located in
Library 5 of HamNet, the satellite library.

On ftp.amsat.org, we'll have to see where Paul, KB5MU, puts the files.

The recording is a 22.3 kHz sample rate, with fairly good quality,
recorded at KF5ZC's north Texas QTH on 25 Dec 95 at 0540 UTC on 145.800.
It was the only pass that I heard the prerecorded greetings.

73 & Merry Christmas

>for WEFAX reception and the tuning offset to use with my HF
>receiver?
>
>73s
>
>Brian Webb, KD6NRP
If the MFJ1270c is anything like the MFJ1278, the wefax reception is
pathetic. Black and white with NO resolution. Check out you
disk that came with the tnc. In the 1278 the command is something
like mode fax NNNN where NNN is the type of fax. I don't have my manual
here(at work)but I will look up the exact command and what program
I had to use.

A much better approach is to download JVFAX 7.0 from either the ARRL,
Amsat, of(I think) the oakland ftp sites. It is near freeware, Works
GREAT and uses a simple uA741 powered by, and "talking" to a Asynch/comm
port. Costs less than $5.oo us if you buy everything new. It is really
the best way to go. Hamcom is another good(though not as gooda as JVFAX
in my opinion). If you have a "real" or 100% compatable Sound blaster,
you could try WXMAN2. It does a good job just by feeding the sb card
with audio.
8080KHz is the best place to start. Nam is on every night as of a couple
of weeks ago. I guess they will keep on the air even if the Feds can't
get their budget togather.
None of the above programs can receive NOAA wx sat fax with out some work.
JVFAX has a diagram for a WX sat am to fm fax converter. It uses an exar
2201?(check out the diagram), and while it is best to build a "real" am
fax demod, you can get impressive results by feeding the output of the
exar to any of the above programs.
Good luck
Email me if you have any questions, I won't be back on unitl jan 2, 1996.
(unless I end up in here for something else)
WEFAX is great fun, do not get discouraged by any intitial hassels. Hang
in there. It will be worth it.

2722. Xmas on Mir

Newsgroup: rec.radio.amateur.space
Date: 1995-12-27 00:00:00 UTC
From: jcorby@headwaters.com
Message-ID: <4brlt2$238@news.worldlinx.com>
Source record: 23334

The following recorded message was received from Mir on Christmas Eve:

"Hello you people on Earth, this is not Santa Claus yet, this is the Russian space station Mir calling - crew 20.

As you all on Earth, we are celebrating Christmas Eve today here in Earth orbit, and we wish you all a Merry Christmas and a peaceful and happy new year, and I will hand you over now to Yuri who will also direct some words to you:

------------------Message in Russian------------------

All the best to you once again, Merry Christmas, Frolische Weihnachten, 73 and bye-bye."

This message was recorded by German cosmonaut Thomas Reiter and was heard every four minutes during passes over my QTH (near Toronto, Canada) on 145.800 MHz.

2726. Receive antenna preamp designs

Newsgroup: rec.radio.amateur.space
Date: 1995-12-27 00:00:00 UTC
From: pepperb@gov.on.ca
Message-ID: <4bsbt4$4ai@govonca3.gov.on.ca>
Source record: 23338

I am curious as to if anyone has any sources for some good antenna preamp designs (as might be in some old backissues of QST, CQ or HamRadio, or 73; as I have a reference library available with most of those). We are interested getting a bit of nice signal amplification on the receiving antenna for RS12 reception (hence 29.408 region). Not all that keen on too intense antenna designs at this point, but if you have modest ideas we are interested. I have not at all even looked at the ARRL handbook, antenna book or anything at all, so I should do so.
But one member of our club is a bit further ahead than I and asked me to see if I could get an idea what he could do to preamp his receive antenna.

Otherwise, thanks for ideas and directions. I see a lot of stuff at the AMSAT and some other web pages - very helpful indeed.

Thanks

Brien

MGS MARS RELAY FLIGHT TEST

The Public May Participate!

(Preliminary Information - 12/14/95)

With the launch of Mars Global Surveyor (MGS) in November of 1996, NASA with begin a decade long exploration of the Red Planet. With the program managed by the Jet Propulsion Laboratory (JPL), NASA plans to launch two spacecraft to Mars every alignment opportunity (approximately every two years). These missions will include a combination of orbiters and landers to explore Mars in a comprehensive and systematic way. To provide data communication capabilities between several of the landed systems to be placed on the surface of Mars and the spacecraft in orbit, many of the orbiters will carry UHF radio relays.

MGS will carry such a relay, called the Mars Relay. The Mars Relay will provide communication support, at first, between several Russian small lander stations on the surface of Mars and the orbiting Mars Global Surveyor. Then future missions planned for launch in 1998 and beyond will also be able to exploit this relay on MGS for surface data return.

During the Mars Global Surveyor Mission, JPL plans to perform a near-Earth test of the Mars Relay. Sometime around 20 to 30 days after launch of MGS in November of 1996, JPL will initiate a test of the Relay employing UHF communication equipment on the Earth. Because the Relay operates at frequencies in the 70 cm band, an opportunity exists for student and amateur participation in the near-Earth test of the Mars Relay. Using 70 cm antennas, individuals will be able to listen for a 1.3-watt beacon operating from the spacecraft on 437.1 MHz at a distance of 8 million kilometers (20 times the distance to the Moon) - the ultimate DX!

Stay tuned to the Mars Global Surveyor Home Page for further details on how to participate in the test:

From: mbv@ti.com
Message-ID: <4c18sh$39f@superb.csc.ti.com>
Source record: 23351

I would like to be able to decide on a tracking board, box, adapter, or whatever is suitable for operating my G5400 rotor box, but the options are sort of confusing. I have heard of the KC Tracker, Sat Trak, SASI, and others that may actually be the same devices under a different name. I don't have extra com ports or a second printer port to devote to this system.
Has anyone done a comparison of these devices to see which one is the most useful, practical, economical, etc.?
I would like to use an automatic tuner feature also, so maybe that would be a must have feature for me, however the doppler shift shown by Instantrack is always way off the actual doppler shift indicated by my FT736.
Any ideas welcomed. Oh Yeah... I don't want to make cables if they are available with these systems. The ads don't say.

To all radio amateurs

SB SPACE ARL ARLS028
ARLS028 DOVE OSCAR 17 Fails Again

The DOVE OSCAR 17 satellite has failed again after a brief time back on 2 meters broadcasting a holiday greeting. The latest failure occurred December 29 at 0500Z as the AMSAT DOVE team continued to reload the spacecraft's software in the wake of a failure December 3.

Jim White, WD0E, of the AMSAT DOVE team says the latest crash suggests a hardware problem aboard the spacecraft. The team had hoped that reloading the satellite's software would fix the problem.

DOVE-OSCAR 17 is used for educational and research purposes.

2742. New Mir recorded greeting!

Newsgroup: rec.radio.amateur.space
Date: 1995-12-29 00:00:00 UTC
From: trandall@mhv.net
Message-ID: <4c1arv$oqu@over.mhv.net>
Source record: 23354

On the 1701 pass today over East N.Y. Mir transmitted another greeting to all. It reads:

"I guess this will be the last TCIS(?) message for this year so a ...we all wish you an especially nice Friday evening and hope you have some especially nice drinks. Please don't forget to have some drinks for us. For Yuriy(SP?), Sergi and myself many greetings, 73 and bye bye."

I threw out a call for Tom Reiter but this message came back.

Tom

2744. Antenna Tracking System Hardware wanted,

Newsgroup: rec.radio.amateur.space
Date: 1995-12-30 00:00:00 UTC
From: Geert Pirens <Geert.Pirens@ping.be>
Message-ID: <30E50BA0.28BA@ping.be>
Source record: 23356

Hello All,

I want to buy me a decent antenna Tracking hardware or If someone have
it for make it myself ? (hpmebrew).

I am looking for a schematic of a Kansas City Tracker, or compatible.

If aneyone have some kind of schematic or PCB layout ?

Or if you have better stuff than this? plaese send me more information.

I like to send commands via my computer to the antenna rotors.

The program I use is INSTANT TRACK v1.0b.

Who is so kind to help me with this ? I wil pay if needed!

PLAESE contact me!! by sending e-mail, or fido mail.

Greetings

Geert Pirens

2745. NORAD Two-Line Orbital Element Set Format

Newsgroup: rec.radio.amateur.space
Date: 1995-12-30 00:00:00 UTC
From: tkelso@afit.af.mil
Message-ID: <4c2ujq$jai@blackbird.afit.af.mil>
Source record: 23357

As a service to the satellite user community, the following description of the NORAD two-line orbital element set format is uploaded to sci.space.news and rec.radio.amateur.space on a monthly basis. The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at speeds up to 28,800 bps using 8 data bits, 1 stop bit, no parity. In addition, element sets (updated daily) and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

==========

Data for each satellite consists of three lines in the following format:

```
AAAAAAAAAAAAAAAAAAAAA
1 NNNNNU NNNNNAAA NNNNN.NNNNNNNN +.NNNNNNNN +NNNNN-N +NNNNN-N N NNNNN
2 NNNNN NNN.NNNN NNN.NNNN NNNNNNN NNN.NNNN NNN.NNNN NN.NNNNNNNNNNNNN
```

Line 0 is a twenty-two-character name (this change is being made to be consistent with the name length in the NORAD SATCAT).

Lines 1 and 2 are the standard Two-Line Orbital Element Set Format identical to that used by NORAD and NASA. The format description is:

```
Line 1
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
10-11 International Designator (Last two digits of launch year)
12-14 International Designator (Launch number of the year)
15-17 International Designator (Piece of launch)
19-20 Epoch Year (Last two digits of year)
21-32 Epoch (Julian Day and fractional portion of the day)
34-43 First Time Derivative of the Mean Motion
or Ballistic Coefficient (Depending on ephemeris type)
45-52 Second Time Derivative of Mean Motion (decimal point assumed;
blank if N/A)
54-61 BSTAR drag term if GP4 general perturbation theory was used.
Otherwise, radiation pressure coefficient. (Decimal point assumed)
63-63 Ephemeris type
65-68 Element number
69-69 Check Sum (Modulo 10)
(Letters, blanks, periods, plus signs = 0; minus signs = 1)
```

Line 2
Column Description
01-01 Line Number of Element Data
03-07 Satellite Number
09-16 Inclination [Degrees]
18-25 Right Ascension of the Ascending Node [Degrees]
27-33 Eccentricity (decimal point assumed)
35-42 Argument of Perigee [Degrees]
44-51 Mean Anomaly [Degrees]
53-63 Mean Motion [Revs per day]
64-68 Revolution number at epoch [Revs]
69-69 Check Sum (Modulo 10)

All other columns are blank or fixed.

Example:

NOAA 6
1 11416U 86 50.28438588 0.00000140 67960-4 0 5293

2747. DL0ART/am - 4th balloon launch scheduled

Newsgroup: rec.radio.amateur.space
Date: 1995-12-30 00:00:00 UTC
From: welp@uni-muenster.de
Message-ID: <4c3m28$fp4@majestix.uni-muenster.de>
Source record: 23359

DL0ART/am - The Nienberge Amateur Radio Group (Germany) plans
another balloon launch on monday, 01-01-96.

This is our fourth flight and will be the first one carrying
a "user access". We`ll have a 70 cm/2 m crossband repeater
aboard. All hams are invited to use this facility. Please,
show appropriate ham spirit while using the repeater!

Planned ARTOB launch 01-01-96:

Launch: # 4
Launch date: 01-01-96 (Monday)
Launch time: 1200 UTC
Launch site: Nienberge near Muenster, Germany, JO32SA

Call sign: DL0ART/am
QRG/mod.: (1) Telemetry beacon: 145.200 MHz (F2D & F2A)
(2) Crossband repeater (F3E):
Uplink: 432.570 MHz
Downlink: 144.470 MHz
(3) RX for remote control on 70 cm and 10 m

Power: (1) 2 W
(2) 5 W

Antennas: (1) groundplane
(2) big wheel - one for 70 cm, one for 2 m
(3) 70 cm: groundplane / 10 m: lamda/2

Diameter ballon: ca. 8 ft

Talk back of DF teams and ground control via repeater Muenster,
DB0PD (R 84). Reports are welcome, please call DL3YBQ or DL9QJ.
Or send QSL to DL9QJ via bureau, via PR or via Internet. Each
report will be confirmed by a special QSL card of the balloon.

Any suggestion or response is always welcome!
Best 73,
Oliver

Mir uses both but mainly 145.550. They were broadcasting a pre-recorded
greetings message yesterday. Listen in to both, you never know which
they'll use but they run mainly packet on 145.550. No packet yesterday,
just the message.

Are there any OS/2 PM (or char. mode) satellite tracker programs
available. There was one person who was supposedly working on an OS/2
progrm but e-mail to him just bounces.

Gayle,

The data from the HST is sent to the Tracking Data Relay Satellites on S-band, convertered and downlinked to WhiteSands NM on Ku band. The data rate is in the multi megabit/sec rate. With out very specialized equipment processing equipment there is not much to be gained in receiving the data.

Dick Rohrer, KC3EF

2752. STS-72 When?

Newsgroup: rec.radio.amateur.space
Date: 1995-12-31 00:00:00 UTC
From: js@ibbs.av.org
Message-ID: <DKH1F1.7B3@ibbs.av.org>
Source record: 23363

I signed up on a mailing list out of San Diego, CA. The elements are very good and up to date. Needless to say, I am impressed. However, the set sent before a launch has no launch date. :-) So when is STS-72 going to launch?

Oh, BTW. What happend to NASA Select? The only thing that has been on is "NASA WASH" with a color pattern. Did even NASA get laid off? If so what about the people that are military that happen to be assigned to NASA duty? I ask since there has been no lack of work for me. We have continued as normal. Humm..

I am looking to buy the following two out-of-print books on satellite communications. If you have them and are willing to sell, please send e-mail with ISBN number. The books are:

Satellite Communications - 2nd ed.
- Robert Gagliardi
Van Nostrand Rheinhold

Digital Communications by Satellite
- James Spilker
Prentice Hall

Thanks! - JRZ
